EDITORIAL

A part of this issue of *Behavior Research Methods & Instrumentation* is dedicated to biofeedback instrumentation. The 11 articles covering this topic are in three subsections. Contributors to the first part, Reviews, Methods, & Designs, are Schandler and Grings, Lubar and Culver, Taub and School, and Obrist, Light, McCubbin, Hutcheson, and Hoffer. Pope, Burgar and Rugh, and Garlington have written pieces for the segment on Safety Standards & Manufacturing. The third group of articles is on Devices & Systems by Shartner, Boudrot, Goodman, and Mulholland, Fridlund and Fowler, and Glaros, Martin, and Chiodo. The Guest Editor of this special section on biofeedback instrumentation is John D. Rugh, University of Texas Medical School at San Antonio. Dr. Rugh solicited all papers and organized this timely section. I wish to thank the Guest Editor and the authors for their fine contributions.

Joseph B. Sidowski
