ERRATUM

Dark, V. J. Switching between memory and perception: Moving attention or memory retrieval? *Memory & Cognition,* **18**, 119-127—The mean accuracy and latency values appearing in Table 2 on page 121 were obtained in an experiment in which the mixed condition comprised memory-first/five-switch lists rather than perception-first/five-switch lists as described in the text. The mean accuracy and latency values for the analyses reported in the text are shown in the corrected table below.

Corrected Table 2
Mean Accuracy (Proportion Correct),
Production Latency (in msec), and Latency Standard Deviations
for the Three Types of List in Experiment 1

Type of List	Accuracy		Production Latency		Standard Deviation	
	M	*SD*	*M*	*SD*	*M*	*SD*
All perception	.988	.026	2,847	524	434	156
All memory	.711	.161	2,668	580	564	232
Mixed	.818	.088	3,534	495	679	160

Note—"Mixed" refers to a perception-first/five-switch list.
