

Notices and Announcements

Special Issue on Teaching Demonstrations and Tutorials

Behavior Research Methods, Instruments, & Computers will publish a special issue on Teaching Demonstrations and Tutorials in February 1999. The articles in this issue describe, in most cases, computer software for demonstrating and teaching topics in experimental psychology. Areas covered include statistical methods, research methods, perception, attention, and memory, among others. The articles also discuss broader issues in the development and use of educational software in psychology. A complete list of authors, titles, and abstracts for these articles can be found at http://icdweb.cc.purdue.edu/~stevelin/special_issue/content.html. A link to this site can be found through the Psychonomic Society home page (<http://www.sig.net/~psysoc/home.htm>).

Forthcoming Articles

Beginning with the January 1999 issue, the Forthcoming Articles list will not be printed in this journal. It can be found at the *Memory & Cognition* Web site: <http://www.sig.net/~psysoc/mrcfth.htm>.
