

A bibliography of picture-memory studies

LIONEL STANDING, BARBARA BOND, JOAN HALL, and JEAN WELLER
Bishop's University, Lennoxville, P.Q., Canada

A bibliography of picture-memory studies*

LIONEL STANDING†, BARBARA BOND, JOAN HALL, and JEAN WELLER
Bishop's University, Lennoxville, P.Q., Canada

The following bibliography includes all papers known to the authors which deal with the learning of pictorial material or visual forms, plus all known papers which are closely related to this field. Under the latter category, papers have been included on the following topics: eidetic imagery, imagery in verbal learning, pathological visual-memory deficits, facial recognition, and the learning of object displays. The criterion for selection has been applied leniently enough to encompass all relevant material, including papers of borderline applicability to picture memory as interpreted in the narrowest sense.

The period covered by the bibliography extends from the last century to the present day. The main method employed has been a detailed search of *Psychological Abstracts* (1927-1972) and of the bibliography in each paper located. While the bibliography overall is as comprehensive as possible, for the years 1960-1970 it is hoped that it is exhaustive. For this decade, a detailed extra search was made of all journals published by the Psychonomic Society, Southern Universities Press, the Journal Press, and the APA, as well as the *American, British, and Canadian Journals of Psychology*. The bibliography contains 685 items.
