Erratum to: *Atten Percept Psychophys* DOI 10.3758/s13414-014-0824-y

One sentence in the article's Results section is not an accurate account of the work it refers to (Hellström, 1979, 2003). This sentence appears under the subheading *Time order errors* in the middle of the text. The amended formulation appears below.

“One of the suggestions proposed to explain TOEs is that the two stimuli are weighted differently, a greater weight often being accorded to the second stimulus (Hellström 1979, 2003). As a consequence, when the levels of the two tones are in low intensity regions, the first stimulus is overestimated relative to the second (a positive TOE), and when they are in high regions, the first stimulus is underestimated relative to the second (a negative TOE).”

The online version of the original article can be found at <http://dx.doi.org/10.3758/s13414-014-0824-y>.
