A mathematical expression in this paper contains a typographical error. In the caption for Table 3, we write that the standard deviation of the residual term was fixed at $\pi^2/\sqrt{3}$. However, in reality the standard deviation of the residual term was fixed at $\pi/\sqrt{3} \approx 1.81$, which is the standard deviation of a logistic distribution with parameter $s = 1$ (see Goldstein, Browne, & Rasbash, 2002, section 3.5). All of the results in Table 3 are correct, as they are

based on the correct expression $\pi/\sqrt{3}$; it is simply the mathematical expression in the table caption that was written in error.
