

# BIOGRAPHICAL INFORMATION

## ABOUT THE AUTHOR

Darcia Narvaez is professor of psychology at the University of Notre Dame, in Indiana, USA. Her academic scholarship has moved from work on nonconscious moral rationality (in the 1990s), to moral character education in the schools (late 1990s- mid 2000s), to the neurobiology of moral development (mid 2000s to present), to the study of evolved parenting practices (presently), and the study of small-band hunter-gatherers who represent the type of society in which humans evolved (presently). All this comes together in a moral developmental systems theory that emphasizes the ongoing epigenetic plasticity of how we develop our humanity and our morality. Her concerns are for developmental optimization and fulfilling human potential—actionable communal imagination—and they come together in her award-winning book, *Neurobiology and the Development of Human Morality: Evolution, Culture and Wisdom*. Correspondence should be addressed to Darcia Narvaez, Department of Psychology, University of Notre Dame, Notre Dame IN 46556; Phone: 574-631-7835; FAX: 574-631-8883; [dnarvaez@nd.edu](mailto:dnarvaez@nd.edu)
