4. C.C. Addison and N. Logan, *Preparative Inorganic Reactions*, vol. 1, Wiley, New York (1964), p. 1—metal nitrates

### Chapters 11–18

For inorganic factual material, the most comprehensive reference text is *Gmelins Handbuch der Anorganischen Chemie*, Verlag Chemie. This is a continuing series so that some sections contain more recent information than others. The best sourcebook in the English Language is *Comprehensive Inorganic Chemistry*, Pergamon, Oxford (1973); volume 3 contains the factual chemistry of the transition elements.

The following standard texts will be found useful in supplementing the data in chapters 11–18.

1. A.F. Wells, *Structural Inorganic Chemistry*, Oxford (3rd edn 1962)—solid-state crystal structures
2. G.E. Coates, M.L.H. Green and K. Wade, *Organometallic Compounds*, Methuen, London (1968)—vol. II contains the transition-metal organometallic compounds
3. R.J.H. Clark, *The Chemistry of Titanium and Vanadium*, Elsevier, Amsterdam (1968)
4. H. Remy, *Treatise on Inorganic Chemistry*, Elsevier, Amsterdam (1956)—vol. II contains the transition elements

5. R. Colton and J.H. Canterford, *Halides of the First Row Transition Metals*, Wiley, London (1969)
6. F.A. Cotton and G. Wilkinson, *Advanced Inorganic Chemistry*, Interscience, London (1972, 3rd edn)
7. D.L. Kepert, *The Early Transition Metals*, Academic Press, London (1972)
