Further information about the Dynamic Standard Setting System (DySSSy) can be obtained from:

RCN Dynamic Quality Improvement programme
National Institute for Nursing
Radcliffe Infirmary
Woodstock Road
Oxford OX2 6HE

DySSSy can now be implemented with the support of a piece of software called the DQI Toolbox. Information on this software is also available at the above address.

The RCN DQI programme runs a network for nurses and others interested in improving quality of care, and for those using DySSSy as a prime method. This is the DQI network (which replaces the QUAN network) and further information is available again from the DQI programme in Oxford.
