

INDEX

- Acids, properties of, 41, 42
 Alkalis, 41, 42
 Ammonia, 56, 141
 from gasworks, 119
 in rain, 119
 Ammonium nitrate, 130
 phosphate, 137
 sulphate: (see Sulphate of ammonia)
 Ammonium sulphate-nitrate, 131
 Animal meal, 132
 Apatite, 135
- Base exchange, 42
 relative to fertilisers, 45
 soil reaction, 46
 Bases, properties of, 41, 42
 Basic slag, 135
 fineness of grinding, 135
 solubility, 136
 Bheel soils, 60
 Biuret, 133
 Blood meal, 83, 118, 132
 Bone meal, 136
 Bones, 118, 136
- Calcium cyanamide (see Cyanamide)
 Carbohydrate, 53
 Carbon/Nitrogen ratio, 59, 79
 of manures, 83, 128
 Castor meal, 83, 131
 Catena, 14
 Cellulose, 53
Chrysopogon zeylanicus, 79, 82
 Citric acid solubility, 66, 135
 Clay, 23, 43
 Coconut poonac, 131
- Compost, 83-88, 128
 Compound manures, 136
 Contour planting, 107
 Cotton seed meal, 83
 Crystal lattice, 26
 Crumb structure (see Soil crumbs and Soil structure)
 Cultivation, degree of, 93
 for annuals, 93
 for perennials, 93
 for seed bed, 93
 relative to aeration, 89
 relative to water movement, 90
 relative to weeds, 94
 shifting, 115
 Cyanamide, 85
- Davy, Humphry, 21
 Drains, 107, 108
- Erosion (see Soil erosion)
 Error, statistical, 147
 of field experiments, 147
 Evelyn, John, 118
- Farmyard manure, 83, 118, 119
 Feathers, as fertilisers, 118
 Fertility, building-up of, 99, 111 ff.
 Fertility, cultivation, 112, 116
 ecological factor, 114
 equilibrium, 112
 organic matter, 59, 71, 116
 Fertiliser, granulated, 139
 mixtures, 137
 nitrogenous, 127 ff.

- organic, 131
 availability, 128
 phosphatic, 134
 Fertiliser, placement, 140
 potassic, 133
 (see also individual items)
 Fertiliser response, 121
 law of diminishing returns,
 123
 Fertiliser, nitrogen, 122
 phosphate, 122
 potatoes, 124
 tea, 122
 Fertiliser, storage, 138
 units, 142
 valuation, 141-142
 Field experiments, objections
 to, 145
 practical value, 157
 Fish guano, 143
 manure, 118, 136
 Fluorapatite, 135
 Fluospar, 135
 Frequency distributions, 153

 Gilbert, J. H., 120
 Green manure, 72
 age for use, 81
 benefits of, 76
 compared with compost, 85
 limitations of, 116
 nitrogen factors, 81
 Green manure species:
 Erythrina lithosperma, 82
 Gliricidia sepium, 82
 Tephrosia vogelii, 81, 82
 Tithonia diversifolia, 83
 Groundnut cake, 83
 Growth promoting substances,
 86

 Hair, as manure, 118
 Hall, D., 120
 Hoofs, as manure, 118
 Horn as manure, 118

 Humus, 4, 22, 52, 54, 60
 Hydrogen ions, 39

 Ions, 42
 Irrigation, 50

 Kainit, 133
 Kaolinite, 12, 27, 44, 68

 Laterite, 12
 Lawes, J. B., 65, 118, 134
 Leaching, 8, 43, 44
 Legumes, as green manures,
 72
 associated with growth, 75
 nodule organisms, 72
 Liebig, J. von, 118
 Lignin, 53, 54
 Litter, 98, 105, 107, 115

 Malt, as manure, 118
 Mean (statistical), 153-154
 Mechanical analysis of soils,
 22, 25
 Mexican daisy (*Tithonia diver-*
 sifolia), 83
 Milne, G., 15
 Mineral phosphate, 134
 Minor elements, 6, 88, 126,
 144
 in nitrate of soda, 130
 Montmorillonite, 12, 27, 28,
 44, 68
 Mucus, 61
 Mulches, 94
 Muriate of potash, 133
 Mycorrhiza, 87

 Nitrate of soda, 130
 Nitrates (see Soil nitrates)
 Nitrification (and denitrifica-
 tion), 57
 Nitrochalk, 130
 Nitrogen, availability in green
 manures, 78-83

- cycle, 54-55
 factor, 81
 Nitrogen-fixing bacteria (see
 also *Rhizobium*), 4
 Nodules, leguminous, 72
 Normal curve, 154
 Nutrients, availability, 63 et
 seq.
 labile pool, 67

 Organic manures, 127, 131
 Organic matter, 52
 related to fertilizers, 117
 return to soil, 71
 soil structure, 30, 60
 Oxygen (including oxidation),
 11, 20, 53, 91
 Overgrazing, 106

 Pedology, 10
 pH scale, 47
 Phosphates, fixation, 66
 organic, 66, 67
 Potassic fertilisers, 133
 Proteins, 53, 56, 131

 Rags, as manure, 118
 Rainfall, percolation, 105
 Randomness, 146, 150
Rhizobium, 73
 Rocks, primary and secondary,
 5
 sedimentary, 5
 Root penetration, 89
 Rothamsted, 119, 124
 Run-off (erosion), 104, 105
 Russell, E. J., 120

 Salts, properties of, 40
 Significant difference, 157
 Silt, 23-25
 Soil, agricultural, 2
 aeration, 89
 alkalinity, 48
 analysis, 120
 buffering, 48
 chemical elements, 6
 colloids, 21, 26, 27, 30, 42
 colour, 11
 compacting, 91
 crumbs, 11, 29, 31, 91
 horizons, 8
 leaching, 12
 mechanical analysis, 22-26
 micro-organisms, 54-60, 64
 minor elements, 6
 mulch, 33, 94, 103
 nitrates, 57
 nitrites, 57
 nutrients, 63 et seq.
 organic matter, 71, 114, 116
 origins, 1
 oxygen, 90
 plasticity, 29
 pore-space, 29-32, 34
 profile, 8
 reaction, 46
 salinity, 48
 structure, 60, 62, 100-104
 surface, 19, 20, 40
 survey, 120
 swelling and shrinkage, 27,
 101
 tilth, 17, 30
 water films, 32
 water movement, 31-36
 weathering, 3, 6, 8, 19, 97
 Soil erosion, 97
 damage, 99
 prevention, 105
 properties favouring, 101
 relative to ground cover, 105
 litter, 107
 overgrazing, 106
 structure, 100
 Soil moisture: capillary, 35-
 37
 energy relations, 37
 field capacity, 33, 34
 gravitational, 37

- hygroscopic, 37
- wilting point, 38, 39
- Soot, as manure, 118
- Standard deviation, 154
- Straw, paddy, 82
- wheat, 82
- Sulphate of ammonia, 45, 80,
119, 124, 126, 129, 133,
138, 142
- potash, 133
- Superphosphate, 119, 124, 134
- Sylvinite, 133
- Symbiosis, 73
- Tea foliage, 82
- Terracing, 107
- Tropical luxuriance, illusion
of, 97
- Urea, 132
- Water-table, 49, 50, 51
- Weathering (see Soil weather-
ing)
- Wood ashes, 118
- Wool combings, as manure,
118
