

INDEX

Note: Page numbers of figures are denoted by an “f”; page numbers of tables are denoted by a “t”.

- Acacia*, 198, 228, 244
 - A. aneura*, 107
 - A. xanthophloea*, 198
- access to green forage (Amboseli ecosystem, Kenya), 238–240, 239f
- access to infrastructure. *See* infrastructural heterogeneity
- Adams County, North Dakota. *See* Northern Great Plains, USA
- Africa
 - case studies, 15f, 195–304
 - drivers of fragmentation, 306, 308–327
 - field studies, East Africa, 309t
 - social capital, 377–380
 - ‘social safety nets,’ 7–8
 - See also* East Africa; South Africa; southern Africa; West Africa; *and specific case studies*
- Afrikaanders (Boers), 289–290
- agistment arrangements, 7, 74, 104–105, 377
- Akamba, Machakos District, Kenya, 309t, 312, 313
- Amboseli ecosystem, Southern Kajiado District, Kenya, 225–253, 346f
 - Amboseli National Park, 227–228, 231, 243, 244
 - Amboseli National Reserve, 231, 243
 - biodiversity, 244
 - connectivity, 378
 - discussion and conclusions, 246–247
 - diversification, 232, 233, 240–241, 241t
 - drivers of fragmentation, 230–234, 244–245
 - climate, 230
 - diversification and intensification, 232, 233
 - drought, 232, 233–234, 246
 - economic issues, 231–233
 - land tenure changes, 232–233
 - land-use policies, 231, 232–233
 - linkage between ultimate and proximate drivers, 233–234
 - proximate drivers, 232–234
 - settlement pattern changes, 232, 233, 244–245
 - ultimate drivers, 230–232
 - ecological responses to
 - fragmentation, 242–246, 247
 - segregation effects, 243, 247
 - structural and functional fragmentation, 243
 - wildlife responses, 243–246
 - ecosystem description, 227–230
 - biophysical description, 227–228, 227f
 - key resources, 229–230
 - Maasailand, 228–230
 - map, 227f
 - effects of fragmentation, 226, 236–247
 - decrease in ecological heterogeneity, 226
 - ecological responses, 242–245
 - pastoral resource utilization, 236–242
 - reduced pastoral mobility, 226
 - reduced spatial scale of interactions, 226
 - wildlife effects, 226, 243–246, 247
 - fragmentation patterns, 226, 227f
 - fragmentation processes, 226, 227f, 230–234, 333
 - group ranches, 228, 233, 309t, 310, 312
 - infrastructural heterogeneity, 346f, 354t, 358–359, 362
 - infrastructure access, 230, 232, 233
 - per capita GDP and HDI score, 357t, 359
 - spatial heterogeneity, 360–361, 360t

- Amboseli ecosystem, Kenya (*continued*)
 intensification, 232, 233, 241–242, 246, 247
 key resource areas, 226
 land tenure, 228, 232–233, 312–313
 land use, 312–313
 historical policies, 231
 multiple systems, 228, 233
 subdivision, 226, 227f, 233, 234, 235f, 236f, 244–245
 landscape fragmentation, 234–236, 247, 362
 landscape heterogeneity, 346f, 349, 349f, 350t, 351f
 livestock, 231–232
 Maasai, 225–226, 228–229
 government policies, 231
 group ranches, 228, 233, 309t, 310, 312
 livestock and economy, 230–232
 market access, 231–232
 Maasailand, 228–230, 232, 265, 313
 maps, 15f, 227f, 229f, 346f
 mobility, pastoral, 226, 237–240, 246
 access to green forage (NDVI analyses), 238–240, 239f
 quantifying, 237–238, 237f
 movement-mediated connectivity, 226
 pastoral resource utilization, 236–241, 246–247
 pastoral societies, 236–242
 coping strategies, 226, 233, 246–247
 economic diversification, 240–241, 241t
 flexibility, constraints on, 246–247
 intensification of livestock production, 241–242
 mobility, 226, 237–240, 246
 resource utilization, implications for, 236–242
 response to fragmentation, 240–242, 241t
 social capital, 378
 privatization/fragmentation field studies, 309t
 scales/scale reduction, 226, 243–246, 246, 247
 sedentarization, 226, 227f, 234, 235–236, 236f
 study areas, 228, 309t
 temporal resource availability, 226
 trade-offs, 226, 247
 water and herbivore movement, 59
 wildlife effects/responses, 226, 243–246, 247
 Amboseli National Park, 227–228, 231, 243, 244
 Amboseli National Reserve, 231, 243
 America. *See* North America
