

SUBJECT INDEX

- accident prevention, 129
- accidental contact, 123, 132
- accidental exposure, 129
- accumulation of contaminants by
 - plants, 21ff, 86, 89ff, 141ff, 159ff, 211
- acetotrophic bacteria, 72
- acoustic reflectance, 8
- activated carbon, 125
- Activated Sludge Equation, 200
- adaptation, 89
- adsorption, 103, 124, 180, 188
- Agent Orange, 121-122
- Agropyron repens*, 82
- Agrostis alba*, 82
- Agrostis tenuis*, 82
- allelic variation, 90
- Alnus glutinosa*, 152
- Alyssum* sp. (*murale*), 81
- Amanita* sp. (*muscaria*, *phalloides*), 23ff, 149
- Amanitopsis fulva*, 18
- Amaranthaceae, 85
- Amaranthus* sp. (amaranth) (*caudatus*, *paniculatus*, *tricolor*), 85, 150, 161ff
- aminodinitrotoluene (ADNT), 55, 103, 214ff
- ammunition, 45ff, 209ff
- Amorpha fruticosa*, 83, 169
- anoxia, 71
- aquifer, 6, 11, 61ff, 111ff
- Arabidopsis halleri*, 91-94
- Arabidopsis lyrata* ssp. *petraea*, 91-92
- Arabidopsis thaliana*, 91, 98-103, 164ff, 212
- arsenate reductase (arsC), 101
- arsenic, 87, 101, 121-122, 131, 179ff, 205, 246, 248-254
 - arsenate [As(V)], 74, 101
 - arsenite [As(III)], 74, 101
- Artemisia vulgaris*, 83
- Asteraceae, 80, 83, 149
- ASTM tests, 124
- Astragalus* sp. (*bisulcatus*), 83, 101
- AtNramp3 (metal transporter), 98
- ATP phosphoribosyl transferase (APRT), 99
- ATP sulfurylase (APS1), 99
- ATP-binding cassette (ABC) family, 100
- Atriplex* sp., 85, 172
- Autoradiography, 142ff
- baghouse system, 131
- Baseline, analysis, conditions, 112-116
- Batch tests, 70-74
- bedrock fracturing, 6
- Belarus, 135-136
- Bentonit, 53-54
- Betaceae, 80
- Betula pendula* (birch), 152
- Betula pubescens*, 18
- Betulaceae, 80
- bioassays, 159ff
- bioaugmentation., 61ff
- bio-availability, 65
- biocides, 121
- biodiesel, 81
- biofilm, 65, 75
- biomonitoring, 140, 155
- bioremediation, 46-52, 61ff, 112, 126, 203, 207
- biosparging, 69-70
- biostimulation, 61ff
- BOD, 57, 199, 204-207
- Boletus edulis*, 17
- Brassica juncea*, 81, 99-101
- Brassicaceae, 80-81, 91

- Brownfields program, 136
BTEX, 67ff, 247
- Cadmium, 74, 91-95, 98-102,
164-167, 205, 246-255
Cd hypersensitivity, 98-99
Cd-GSH complexes, 100
- Calcium, 64, 130-131, 142-144
Calluna vulgaris, 17-18
calmodulin, 97
- CaMV 35S promoter, 98-103
Canna x generalis, 86, 172
Cannabaceae, 86
Cannabis sp (indica, sativa), 86
Cannaceae, 86
Caragana arborescens, 83
Carex sp. (buxbaumii, gracilis, hirta), 85, 153, 213, 220
Caryophyllaceae, 80, 85
cash crops, 136
cDNA probes, 170
cell walls, 80, 101-102, 147, 212
cellulose, 64, 212
Cesium, 137, 15ff, 83, 139ff
chain of custody, 137
Chamaecytisus ruthenicus, 17
chelators, 96-99
chemical sludges, 131
chemical warfare agents, 121,
123
Chenopodiaceae, 85
Chernobyl, 15ff, 135, 140
chlorinated hydrocarbons, 63, 71,
111ff
chlorinated solvents, 68, 111ff,
121
chloroacetanilide herbicides, 100
chlorocatechol-1,2-dioxygenase
(cbnA), 103
chloroplasts, 99, 101
chlortoluron, 103
Chromium, 74, 121, 131, 246,
248, 255
cis 1,2-dichloroethylene, 116
Cladonia (mitis, rangiferina), 17
Cladonio-Pinetum ecosystem,
17ff
Cobalt, 246
COD, 57, 199, 203-207
colorimetric methods, 46
compartmentalization, 102
composite sample, 49
conductance, 115
conjugation, 102, 212
containment, 3ff, 235-237
Copper, 74, 99, 164, 205, 246,
249, 251, 252, 254, 255
Corioliolus versicolor, 103
Corynephorus canescens, 17
cost analysis, 3ff, 45-47, 61ff,
119ff, 177ff
crabapple, 80
crop plants, 102, 211
Cucumis sativum, 160
cuticular wax layer, 167
Cyperaceae, 85
Cyperus sp. (alternifolius, papyrus), 85
Cysteine, 99
cysteine synthase (CSase), 95, 99
cytochrome P450
monooxygenases, CYP450,
103
- dark respiration, 164
data loggers, 115
Daucus carota, 149
debromination, 103
decision-making, 4, 13, 129
degradation rate constants, 66
Dehalococcoides ethenogenes,
72-75
dehalogenation, 75, 112
de-icing salt (NaCl), 163ff
denitrification, 66, 203
Deschampsia caspitosa, 82
Desulfitobacterium sp., 72
detoxification, 79-80, 95, 101-
103, 147, 160, 172

- dichlorodiphenyltrichloroethane (DDT), 121-123, 245, 247, 248
- 2,4-dichlorophenoxyacetic Acid (2,4,D), 121
- Dicranum polysetum*, 17-18
- dioxins, 84-86, 131, 249, 252
- discharge standards (limits), 185-186, 191-194,
- DRUADAN software, 40
- dry deposition, 80
- EA2192 {S-[2(diisopropylamioethyl)ethyl] methylphosphonothioic acid}, 130
- Eichhornia crassipes* (water hyacinth), 87
- Elbe River, 111ff
- electrolyte leakage, 167
- electron acceptor, 61ff
- electron donors, 61ff
- emergency containment measures, 12
- endocrine disruptors, 121, 123
- endoplasmic reticulum, 101
- Enterobacter cloacae*, 102, 213
- environmental exposure criteria, 126
- environmental site characterization, 4ff
- ethene, 72-75, 112
- ethyl methyl phosphonic acid (EMPA), 130
- ethylene dibromide, 103
- Eucalyptus tereticornis*, 144
- evapotranspiration, 52
- excavation, 47ff, 124ff, 210
- explosives, 45ff, 102, 209ff, 230
- extracellular polymers, 75
- Fabaceae, 83, 149
- fermentation, 65, 71, 205-206
- Festuca* sp. (*arundinacea*, *ovina*, *rubra*), 82
- field analytical methods, 46
- firing range, 53ff
- flavonoids, 80, 83
- flax, 154-155
- fodder grasses, 82
- forest food, 15ff
- forests, 15ff, 83, 230, 234, 237
- Frangula alnus*, 18
- game animals, 16
- gamma-glutamylcysteine, 101
- gamma-glutamylcysteine synthetase, 99-101
- gasoline, 75, 120
- GC/MS, 137
- gene cloning, 104
- genetic analysis, 92ff
- genetic engineering, 89ff
- genetic variation, 84, 89ff
- genomics, 90, 94-95
- geo-diagnostic investigations, 4ff
- geo-electrical measurements, 5-7
- geological survey, 3ff
- geophysical investigations, 3ff
- Glomus intraradices*, 82
- glutathione synthase, 99-100
- glycerol dinitrate, 102, 213
- glycerol mononitrate, 102, 213
- glycerol trinitrate (GTN), 102, 210
- Gossypium arboreum*, 103
- grasses, 16, 82
- groundwater, 6ff, 48-52, 68ff, 111ff, 119ff, 197, 210-211, 232ff
- half-life, 40, 65, 122, 130
- halorespiration, 72
- Head Space Analysis (HSA), 9
- heavy metals (HMs), 62, 69ff, 79ff, 89ff, 121-123, 159ff, 250, 253
- Helianthus annuus* (sunflower), 83, 141-146, 155
- Helianthus tuberosum*, 83, 103
- Hemp, 154-155
- herbicide, 100-103, 121-123, 230

- hexachlorobenzene, 244, 248
 hexachlorohexane, 71,
 Hexogen, 45, 54, 56
 Histidine, 99
 HMA, family of transport
 proteins, 95, 98
Hordeum vulgare (barley), 82
 HPLC, 46, 146, 169, 214-215,
 244, 247
 HRC[®] Hydrogen Release
 Compound, 71-72
 Humidity, 65
 humus content, 255
 hydraulic flotation process, 135
 hydrocarbons, 3ff, 61ff, 80ff,
 111ff, 230, 244, 247, 255
 hydrogen peroxide, 70
 hydrogenotrophic micro-
 organisms, 71-72
 hydrological characterization,
 124
 hyperaccumulation,
 hyperaccumulator plants,
 80ff, 91ff, 139ff, 186
Hypogymnia physodes, 17-18
- immunological methods, 46
in situ chemical oxidation, 112
in situ metal bioprecipitation
 (ISBP), 72
in situ oxygen curtain (ISOC), 70
 incineration, 47, 52, 87, 126, 131-
 137, 210
 injection well, 75, 115-116
 inorganic contaminants,
 pollutants, 90ff, 125, 131,
 246
 Iodine, 125, 141ff
Iris pseudacorus, 153
 Iron, 48-56, 65-71, 98, 112, 179-
 184
 iron nano-particles see zero-
 valent iron particles,
- Juncus* sp. (*glaucus*, *inflexus*),
 153, 213, 220
- Kochia scoparia*, 85
- laccase (LAC1), 103
Lactarius rufus, 17
Lactuca sativa, 160
 land use, 76, 230ff
 law, legislation (Germany, Italy),
 4ff, 229ff
 leachate, 52-53, 240ff
 Lead, 74, 84, 91, 98-102, 121,
 164ff, 174, 205, 246, 248,
 250, 251, 253, 254, 255
 leaf hairs, 80
Lepidium sativum, 160
 Lewisite (L, 2-
 chlorovinyl dichloroarsine, 2-
 chlorovinyl arsonous
 dichloride), 122
 Lichens, 16ff
 lignin, 64, 147, 212
Liriodendron tulipifera (yellow
 poplar), 100
Lolium sp. (*multiflorum*,
 perenne), 82
 Lugeon permeability tests, 8
- manganese, 65-66, 148, 179-182
 mapping, genetic, 94
 mass spectrometry, 95, 168, 215
 Material Safety Data Sheet, 123
Medicago sativa, 83
Melampyrum pratense, 17
Melilotus officinalis, 83
Mentha arvensis, 149
 mercuric ion reductase (*MerA*),
 100
 Mercury (elemental, ionic,
 organic), 100, 121, 246, 248,
 250, 251, 253, 254, 255
 mercury volatilisation, 100
 metabolomics, 94
 metal tolerance protein 1
 (*MTP1*), 92, 94-95
 metallothionein, 80, 98-99, 170
 methane, 64, 68, 199, 205-206
 methanogenesis, 68-72, 205

- methanogenic bacteria, 66
methyl phosphonic acid (MPA),
130-132
methyl *tert*-butyl ether (MTBE),
70, 75
metolachlor, 103
micro-aerophilic conditions, 71
microarray technology, 94, 169-
170
microcosms, 68-73
migrating contaminants, 69
Military Agents, 121, 130
military sites, 45ff
mini-RIFS process, 125
Miscanthus sp. (*giganteus*), 82
Mn peroxidase (MnP), 103
Model plant systems, 91
Molinio-Pinetum ecosystem, 18ff
monitored natural attenuation, 67,
76,
monitoring wells, 5, 9, 11, 115
Moraceae, 80
mosses, 16ff
MRC[®] (electron donor), 72
mulberry, 80
multi-array tomography, 7
mushrooms, 16ff
Mustard, Bis(2-chloroethyl)
sulfide, 122
mycorrhizal fungi, 81, 85

natural attenuation, 67ff, 136,
210
nerve agents, 121
neurotoxins, 121
Nickel, 81, 246, 248, 249, 251,
252, 254, 255
Nicotiana tabacum (tobacco), 97-
103, 213
nicotianamine synthase, 95
nitrate ester explosives, 102, 210-
213
nitro-aromatics, 71
NtCBP4 (putative cation
channel), 97
nuclear power plants, 155

Nutrolase[®] (protamylase), 72
obligatory settling out zone, 17,
37
Octogen, 54-56
“omics” technologies, 96
organomercurial lyase (MerB),
100
organophosphides, 121
Oryza sativa (rice), 103
oxidation reduction potential
(ORP), 66, 75, 115, 199
oxygen-releasing compounds
(ORC), 70

P₁B-ATPase, 98
Papilionaceae, 80
Parathion (0,0-diethyl-0-p-
nitrophenylphosphorothioa
te), 121, 122
Pasture grasses, 82
Paxillus involutus, 17
pentachlorophenol (PCP), 103,
198, 244, 248
permeable reactive barriers, 63,
69, 112,
Persicaria amphibia, 149
personnel safety, 129
pesticides, 80, 121-123, 211
petroleum hydrocarbons, 67-68,
80-83, 247
pH, 21, 65, 199, 206, 243
Phalaris arundinacea, 82
Phaseolus vulgaris, 147, 150
phenols, 70, 247
phenotypic plasticity, 90
phenylmercuric acetate, 101
photometric tests, 49
Phragmites australis, 82, 86,
153, 213, 220-222
phytochelatin synthase (*AtPCS1*),
99
Phytochelatin (PCs), 80, 98-99,
170
phytoextraction, 52, 84, 90, 143,
151, 211

- phytomining, 81
 phytoremediation, 79ff, 89ff,
 123, 139ff, 159ff, 206, 209ff
 phytostabilization, 82, 143, 211
 piezometer tubes, 9
Pinus sylvestris, 17
 plant gas exchange, 163-164
 plant water status, 163-166
 plasma membrane, 97, 102
Pleurozium schreberi, 17
 Poaceae, 80, 82
 Pöhla wetland, 177ff
Pohlia nutans, 17
 polychlorinated biphenyls
 (PCBs), 80, 83-86, 121, 124,
 131, 245, 248, 251, 254, 255
 polycyclic aromatic
 carbohydrates (PAHs), 70,
 80-86, 167-168, 244, 247,
 255
 Polymerase chain reaction (PCR),
 95, 170
Polytrichum piliferum, 17
 Pontederiaceae, 87
Populus sp. (*poplar*) (*trichocarpa*
 x deltooides, *trichocarpa x*
 maximowiczii, *nigra x*
 deltooides), 52, 80, 84-85,
 100, 141, 216
 post-injection monitoring, short
 and long term, 112, 116
 potassium, 64
Potentilla reptans, 149
 proteomics, 94-95
Pseudoevernia furfuracea, 18
Pteridium aquilinum, 144
Pteris vittata, 87
 Pump-and-treat, 112

 quantitative trait loci (QTL),
 mapping, 90-94

 radioactive contamination, 16ff,
 119ff, 139ff, 177ff
 radionuclides, 15ff, 80-86, 139ff,
 189-190, 211

 Radium, 226, 179, 182, 186-188
Ralstonia eutropha, 103
 removal efficiency, 125
 resistivity profiles, 5, 7-9
 rhizome, 82, 172
 rhizosphere, 31, 41, 64, 80, 211
Robinia pseudoacacia, 83, 168
 Rosaceae, 80, 149
 rotary kiln, 131
Rozites caperata, 17
Rudbeckia sp., 83
Russula paludosa, 18,

 Salicaceae, 80, 84
 salinity, 82-86, 172
Salix sp. (*S. burjatica*, *S. caprea*,
 S. daphnoides, *S. pupurea*, *S.*
 smithiana, *S. viminalis*, *S.*
 viminalis x S. Caprea),
 (willow), 80, 84-85, 144
Sambucus nigra, 152
 sample collection, 9, 18, 46-51,
 112-116, 129, 137, 172
 sampling error, 45
 SCBA Chemical Suits, 132
 secondary destruction chamber,
 131
 seed germinability, 160-163
 seedling vigour, 160-161
 Selenium, 83, 101, 246
 Selenate, 101
 Selenite, 101
 volatilisation, 101
 selenocysteine (SeCys), 101
 selenocysteine lyase, 101
 selenocysteine methyltransferase
 (SMT), 101
 selenomethionine, 101
 Sequencing Batch Reactor
 (SBR), 202-203
Sinapis alba, 81, 160, 169
 site cleanup, 112, 125, 136, 138,
 178
 site closure, 178-181
 site hydrology, 7, 119, 124
 site investigations, 3ff, 47, 113

- sludge, 137, 148, 153, 193, 200ff, 245
 soil density, 124
 soil geology, 119
 soil grain particle size, 9, 113, 124, 243
 soil matrix, 8, 64-65
 soil physical parameters, 9, 124
 soil type, 21, 29, 31, 123, 125, 255
 soil washing, 135-136
Solidago sp., 83
 sorption, 16, 67, 185, 194
 sparging wells, 69
 specific activity of radionuclides, 16ff
 Stokes law, 135
 stratigraphic drilling, 5
 stripping, 70
 Strontium, 90, 83, 135, 141-145,
 sulphate-reducing bacteria, 66, 72-75
 sulphates, 65ff, 111ff, 179, 182
 surface water, 6, 53ff, 119, 211, 230, 232-233

Tanacetum sp., 83, 149
 tetrachloroethylene (PERC), 116, 122
 thermal desorption, 131
Thlaspi sp. (*arvense*, *caerulescens*, *calaminare*), 81, 91ff
Thymus serpyllum, 17
 tiered approach, 4-5, 14
 tomographic inversion, 7
 total nitrogen, 57
 total phosphate, 57
 toxicity, 65, 80, 98, 119ff, 139, 210
 transfer coefficients, 37
 transgenic plants, 95ff, 213
 transport proteins, 91ff,
 trichloroethylene (TCE), 75, 80-85, 103, 112, 116,
 trickling pond, 47-48

Trifolium spp. (*repens*), 83, 149
 trinitrotoluene (TNT), 45, 102, 209ff
Tripleurospermum inodorum, 149
Triticum aestivum (wheat), 38, 82, 146, 212
Typha sp. (*angustifolia*, *latifolia*), 86, 153, 213,
 Typhaceae, 86

 Ukraine, 16ff, 140
 underground storage tanks,, 62
 uptake
 mechanisms, 63, 172
 of metals and radionuclides, 81, 84, 86, 98, 140-145, 150-155, 169, 172
 of organic contaminants, 210, 214ff
 Uranium, 135, 140ff, 178ff, 205
 urban areas, 81-84, 160

Vaccinium sp. (*myrtillus*, *vitis-idaea*), 17ff
 Vacuole, 80, 100, 102, 211
 vacuolar sequestration, 100, 102, 211
 variation, genetic
 interspecific, 91
 intraspecific, 93ff
Vetiveria zizanioides, 82
 vinyl chloride (VC), 70, 116
 VX (O-ethyl-S-(2-isopropylaminoethyl) methyl phosphonothiolate), 121, 130

 waste water, 47, 155, 197ff, 210, 222, 233
 water holding capacity, 52
 wetland, constructed or artificial, 45ff, 137, 146, 153, 177ff, 222
 wild herbs, wild plants, 16, 37, 49

Xerocomus badius, 17, 31

Yeast cadmium factor 1 (YCF1),
100

Zea mays (maize), 82

zero-valent iron (ZVI) particles,
63, 111ff

Zinc, 74, 84, 91, 98, 102, 246,
249, 252, 255

Zn deficiency, 92

Zn tolerance, 92-94

Zn accumulation, 92-94

Zn transporters (ZNT1, ZNT2,
ZntA, ZTP1), 92
