

Index

A

Acetone, 117
Adhesion, 124
Air bubbles, 126
Air dried, 121
Anti-roll devises, 75, 76
Anti-roll guide, 4

B

Blade angle, 4, 184–185
Boats, 40
Book, 61
Brain blockers, 181
Brush-brush, 79

C

Chamber temperature, 1
Chatter, 98, 113–115
Chucks, 4, 38, 43
Chunked out, 48, 98
Common sense, 137–138
Compression artifacts, 146, 147
Compressor, 1
Coverslipping, 126–128
Crumple stage, 48, 98
Cryo-embedder, 160–161
Cryostat, 1, 182–183
 blade, 79
 maintenance, 10–11
Curling away, 60, 72, 86, 104, 108–110
Cytology preparations, 32–35
 crush prep, 33, 35
 scrape prep, 32, 34
 touch prep, 32, 33

D

Difficult cases, 136–138
Disinfection, 9

Dispensing Slides, 45
Dissecting, 24–26

E

Embedding, 37
Embedding shelf, 45
En face, 38
Ethanol, 117

F

Face down cryoembedding in well bars,
 45–48
Face down embedding, 40, 42
Face up embedding, 38–40
Fat gouge maneuver, 108
Fat, removing from lymph nodes, 24–26
Filling the well, 53, 54
Fixation, 117–121, 173, 186
Formalin, 117
Fredrick E Mohs, 152
Freezing artifacts, 5, 56, 144–148, 188
Frozen block cryoembedding, 66
 cutting board / freezing griddle, 66
Frozen section brush technique, 78–79
 body position, 80–82
 holding the brush, 81–83

G

Gelatin encasements, 180
Gouge, 74, 110
Gross examination, 14–35
Gross sectioning of tissue, 28–32

H

Handle, 72, 91, 103, 106
Heat extractor, 6
H & E stain, 123

I

- Ice crystals, 147
- Inking resection margins, application of ink, 16–20
- Isopentane, 187

K

- Knife holders, 2

L

- Launch pad, 48
- Liquid nitrogen, 187–188
- Liquids, 57
- Lympho-glandular bodies, 138

M

- Mature face, 84
- Methanol, 117
- Miami special, 159–160
- Microtome, 1
- Mohs surgery, 151–152
- Multiple sections, 31
- Multitudes, 50

N

- Notating the map, 155, 157
- Nuclear ice crystals, 148

O

- Observations on observation, 133–136
- Oil red O stain, 123
- On edge, 52–53
- On edge embedding, 38
- On point, 52–53
- Operative consultation, 131–133
- Organ orientation, 179
- Organ shrinkage, 177, 178
- Orientation, 9, 84–86
- Over-chuck freezing blocks, 43–44

P

- Paper embedding, 50, 61–65
 - book, 63
 - membrane rolls, 63, 64
- Parallel faces, 31, 54–55, 154, 157
- Peltier freezing stage, 2, 182–183
- Perfusion, 172–175

- Perpendicular margin sections, 30
- Plan for reading slides, 135–136
- Plastering, 43, 103, 108
- Plastering technique, 59–61
- Plastic molds, 165
- Poly-L-lysine slides, 8
- Precision cryoembedding system, 42–43
 - 163–165
 - freezing time, 47–48
- Pre freezing tissue, 40
- Premature face, 84

R

- Reading the block, 84
- Relaxation, 153
- Reporting the diagnosis, 148–149
- Resection margin, 15–16
 - false negative margin, 17–18
 - inking resection margins, 16–20
 - true margins, 17, 18
- Retrieving from the block, 72
- Rotating the block, 86–87

S

- Sampling errors, 31
- Scanning objectives, 136
- Sectioning, 182–183
- Shave margin, 29
- Slide technique, 158–159
- Sliding microtome, 182–183
- Snap freezing, 40, 187
- Specimen holders, 4
- Specimen stage, 38
- Staining, 121–122
- Super flat embedding, 49

T

- Tape transfer system, 182
- Temperature of the block, 75, 98–102
- The cut off technique, 57–59
- The Precision cryoembedding system, 42–43
- The “Sausage Trick,” 26
- Thick and thin sections, 112–113
- Thick sections of fat, 106–107
- Thinking of the diagnosis, 134–135
- Thin stripes, 113
- Toluidine blue stain, 123
- Trimming, 8
- Trimming minute specimens, 87–88
- Trimming the block, 83–88

W

Well bars, 43

X

X-Y axis, 84-86

X-Y orientation, 49

We must know what excellence looks like and sounds like in order to begin to approximate it.

We can only achieve excellence if we are aware of all the ways to make mistakes and are aware when we are making them.

Stephen Peters MD
