A

- Absorption & elimination, bioconcentration theory, 19
- Acyltransferases, aquatic organisms, 79
- Advanced glycation end products, α -dicarbonyl species, 142
- Age-dependence, pesticide bioconcentration, 14
- Aquatic organism
 - acyltransferases, 79
 - conjugation reactions (diag.), 74
 - glutathione-S-transferases, 75
 - growth, bioconcentration effects, 14
 - hydrophobicity effects, 8
 - metabolism
 - organo- & organo-phosphorus pesticides, 85
 - pesticide
 - bioaccumulation, 1 ff.
 - bioconcentration, 1 ff.
 - metabolism, 1 ff.
- Aquatic species
 - BCF (bioconcentration factor), pesticide clearance times, 23
 - BCF vs. $\log K_{ow}$ (diag.), 41
 - bioconcentration
 - humic acid effects, 18
 - lipid-content effects, 9
 - organochlorine pesticides (table), 24
 - organophosphorus pesticides (table), 30
 - pesticides (table), 35
 - pyrethroid insecticides (table), 34
 - bioconcentration theory, 19
 - chemical metabolism (table), 80
 - differences, pesticide metabolism, 90
 - lipid content (table), 10
 - lipid content variability, 11
 - metabolism

- glucose & glucuronic acid transferases, 72
- organochlorine pesticides (table), 86
- pesticides (table), 67
- pesticides, 89
- pesticide
 - bioaccumulation (table), 43
 - biota-sediment accumulation factors (table), 46
 - metabolic pathways (table), 53
 - pesticide metabolism
 - enzymes, 54
 - esterases, 63
 - regulatory testing, 2
- Aquatic system, chemical flow (diag.), 3

B

- Bacterial cell signaling, chemical exposure, 140
- BAF (bioaccumulation), controlling factors, 42
- BCF (bioconcentration factor)
 - defined, 4
 - effect
 - pesticide class, 42
 - pesticide clearance times, 23
 - physico-chemical effects (table), 5
 - vs. $\log K_{ow}$, pesticides in aquatic species (diag.), 41
 - vs. $\log K_{ow}$, pesticides in fish (diag.), 7
- Bioaccumulation
 - description, 2
 - dietary route, 47
 - ecological effects, 45
 - effects, dissolved organic carbon, 47
 - flow in aquatic system (diag.), 3
 - metabolic effects, 48
 - of pesticides, 1 ff.
 - aquatic species (table), 43

- Bioaccumulation (*cont.*)
 theory, 49
 sediment effects, 44
- Bioaccumulation factor (BAF), controlling factors, 42
- Bioactive α -dicarbonyls, examples, 143
- Bioconcentrated pesticides, organ distribution, 15
- Bioconcentration
 in aquatic species
 organochlorine pesticides (table), 24
 organophosphorus pesticides (table), 30
 pesticides (table), 35
 pyrethroid insecticides (table), 34
 controlling factors, 3
 description, 2
 dissolved organic carbon effects, 18
 effects
 biological factors, 14
 humic acids, 18
 environmental effects, 16
 flow in aquatic system (diag.), 3
 illumination effects, 16
 isomerism effects, 9
 lipid-content effects, 9
 metabolism effects, 14
 pesticides, 1 ff.
 pH-dependency, 17
 potential, test regulations, 2
 theory, 19
 absorption & elimination, 19
- Bioconcentration factor (BCF), defined, 4
- Biological factors, bioconcentration effects, 14
- Biomagnification, description, 2
- Biota-sediment accumulation factors (BSAF) for pesticides, aquatic species (table), 46
- Bio-uptake by aquatic species, metabolic effects, 51
- Bronchiolitis obliterans, lung disease, 133
- C**
- Carbamate pesticides, chemical structures (illus.), 102
- Cell signaling
 chemical exposure, 140
 electron transfer & reactive oxygen species, 140
- Chemicals
 exposure, cell signaling effects, 140
 flow, aquatic system (diag.), 3
 hydrophobicity, BCF effects, 8
 metabolism, aquatic species (table), 80
 physico-chemical effects on BCF (table), 5
 uptake, aquatic organism growth effects, 14 (various), structures (illus.), 99
- Conjugation reactions, aquatic organisms (diag.), 74
- Cytochrome P450, reaction scheme (diag.), 54
- D**
- Diacetyl
 connection, ethanol metabolites, 140
 electron affinity, 138
 enzyme activator, 145
 genotoxicity, 144
 mechanism of action, 136, 139
 mechanism of action, electron transfer, 139
 molecular electrostatic potential, 139
 and other α -dicarbonyls, protein glycation, 142
 ROS (reactive oxygen species) production, 135
 structure (illus.), 137
 toxic effects, metabolite vs. parent, 136
 toxicity
 caused by electron transfer, 133 ff., 135
 lung effects, 134
 oxidative effects, 134
- α -Dicarbonyls
 bioactive examples, 143
 diacetyl relationship, 137
 species
 advanced glycation end products, 142
 reactive oxygen & carbonyls, 142
