

# Index

10% rule, 149, 197, 259

## A

acoustic emission, 156, 163  
adhesion, 152, 261  
adhesive forces, 157, 239, 247  
apparent hardness, 62  
area function, 82, 85, 86, 89, 92, 183, 186,  
190, 191, 193, 194  
Auerbach, 8

## B

batch testing, 260  
Berkovich indenter, 5, 8, 22, 23, 27, 28, 31,  
34, 47, 52, 82, 86, 107, 156, 168, 169, 185,  
250  
Brinell hardness, 7, 21, 25  
Buckingham Pi theorem, 120  
Burgers vector, 92

## C

calibration, 85, 168, 182, 184, 186, 191, 192,  
194  
center of curvature, 2, 44  
chemical bond, 239, 241  
coefficient of friction, 156, 157, 248  
combined modulus, 2, 46, 50, 94, 148, 215  
compliance, 30, 33, 34, 81–83, 85, 130, 183,  
187, 190–193, 259  
compression, 4, 8, 9, 12, 54, 244  
conical indenter, 4–8, 12, 13, 22, 53, 85, 92,  
95, 109, 119, 122, 147, 165, 236–238  
constraint factor, 8, 9, 12–14, 90, 122  
contact stiffness, 68, 69, 89, 94, 127  
correspondence principle, 139  
crack tip, 92, 169  
creep, 15, 37, 77, 78, 122, 123, 136, 165, 183,  
187–189, 213, 219, 265

critical load, 156  
cube corner indenter, 22, 28  
cylindrical punch indenter, 39–41

## D

damping coefficient, 129, 130  
delamination, 32, 147, 154, 156, 163  
depth-sensing indentation, 14, 265  
Derjaguin approximation, 243, 244  
diamond, 216  
dimensional analysis, 56, 119, 120, 122  
dislocations, 15, 92, 93, 165  
distance of mutual approach, 3  
DMT theory, 247  
drift rate, 258  
dynamic hardness, 174, 222

## E

elastic constraint, 12, 24  
elastic recovery, 29, 30, 52–54, 77, 181,  
265  
energy, 265  
expanding cavity model, 12, 24, 28

## F

face angle, 6, 22, 47, 183, 185, 192  
feedback, 267  
Field and Swain method, 46  
flow stress, 8  
Fourier transform, 134  
fracture toughness, 8, 28, 166, 167, 213, 268  
friction, 10, 92, 94, 155–158, 240, 247–249  
friction coefficient, 260

## G

geometrical similarity, 6, 7, 42, 56, 108, 165  
geometry correction factor, 6, 108, 186

**H**

Hertz, 1, 2, 4, 5, 8, 10, 43–47, 79, 176, 236, 244–247  
 high temperature, 169, 170, 202, 261  
 hydrostatic core, 12, 148  
 hydrostatic pressure, 9

**I**

impact, 174, 222  
 indentation hardness, 8, 21, 24, 25, 30, 92, 182, 186, 187, 190, 191, 248  
 indentation modulus, 24, 187  
 indentation rate, 264  
 indentation size effect, 77, 91  
 indentation strain, 4, 7, 9, 11, 21, 25, 102, 176, 247  
 indentation stress, 4, 9, 92, 153, 154, 235  
 initial contact force, 14, 36, 79, 80, 214  
 initial penetration, 265  
 initial penetration depth, 79, 183–185, 214  
 instrument compliance, 83, 190, 192, 214  
 intermolecular forces, 239, 240  
 internal pressure, 12  
 ISO 14577, 181–183

**J**

JKR theory, 247

**K**

Kick's law, 63  
 Knoop indenter, 8, 22, 28, 29, 52–54, 182, 252

**L**

lateral cracks, 166, 167  
 law of mixtures, 150  
 Lennard-Jones potential, 240, 241, 247  
 linear elasticity, 9  
 loss modulus, 126

**M**

Martens hardness, 184–186, 189  
 Maxwell element, 126  
 mean contact pressure, 1, 4, 7–10, 12, 13, 24–27, 30, 45, 48, 62, 94, 98, 105, 106, 165, 176, 186, 237, 238  
 median cracks, 28, 167  
 Meyer, 8  
 Meyer hardness, 25, 186, 269  
 Meyer's index, 173  
 Meyer's law, 25  
 Mohs' hardness scale,

mounting, 264  
 multiple-point unload method, 45, 46, 49, 58

**N**

nanocomposite film, 216

**O**

Oliver and Pharr method, 16, 45  
 oscillatory motion, 31, 36, 67, 269

**P**

phase-transformations, 266  
 picoindenter, 17  
 pile-up parameter, 88  
 piling-up, 77, 88–90, 121, 156, 266  
 plastic zone, 7, 9–13, 24, 25, 35, 88, 92, 105, 150, 166  
 plasticity, 8, 11, 31, 34, 43, 106, 109, 147, 215  
 power law, 55, 109  
 pressure distribution, 8, 10, 11, 235, 236, 244, 245  
 principal stresses, 8, 237  
 projected area of contact, 22, 26, 28, 48, 50, 52, 77, 186, 191

**R**

radial cracks, 166–168  
 reaction forces, 33, 81, 190  
 reduced modulus, 2, 187  
 reference blocks, 182, 193, 194  
 relative radius, 2, 43, 46  
 relaxation, 30, 52, 54, 188, 247  
 representative strain, 7, 28, 34, 165  
 residual stress, 266  
 residual stresses, 8, 15, 92, 99, 152, 153, 175, 176, 213

**S**

scanning electron microscope, 16  
 scratch hardness, 155  
 scratch testing, 261  
 simulation, 98, 105, 113  
 single-point unload method, 45, 46, 51, 52, 58  
 sinking-in, 77, 88–90, 121, 266  
 slip lines, 11, 13  
 slip-line theory, 24  
 specimen positioning, 268  
 spherical indenter, 4, 21, 23, 25, 30, 45, 48, 84, 86, 95, 183, 236  
 stiffness, 21, 36, 67–69, 81, 125, 129–131  
 storage modulus, 126

strain gauge, 16  
strain gradient, 92, 93  
strain rate, 123, 165  
strain rate sensitivity, 165  
strain-hardening, 10, 15, 35, 88, 90, 114, 119, 165, 183, 213, 266  
strain-hardening exponent, 173  
stress intensity factor, 168  
stress trajectories, 237, 238  
stress-strain relationship, 4, 88  
superhard materials, 217  
surface modified layers, 268  
surface roughness, 68, 93, 94, 183, 185, 189, 247, 249, 267

**T**

tangential force, 155  
tension, 4, 245  
thermal contact resistance, 171  
thermal drift, 37, 77, 78, 183, 184, 188, 200, 201, 258  
thermoelastic contact, 171  
thin films, 31, 34, 95, 141, 147, 155, 163  
three-element model, 219  
tip rounding, 34, 95, 97  
transfer function, 127  
Tresca, 9, 13, 14

true hardness, 62

**U**

uniform pressure, 57  
Universal hardness, 184

**V**

van der Waals forces, 241, 242  
Vickers hardness, 26, 48, 269  
Vickers indenter, 5, 7, 8, 21, 22, 25, 26, 28, 34, 47, 169, 183, 190, 191, 251  
viscoelastic properties, 31, 218, 263  
viscosity, 133  
Voigt element, 126  
Voigt model, 139  
von Mises, 9, 13, 14

**W**

wear, 174  
work, 69, 121, 189, 240  
work hardening, 10  
work of adhesion, 243  
work of cohesion, 243  
work of indentation, 61

**Y**

yield stress, 9, 122, 151, 176
