Subject Index

- A**
Achondroplasia 25–29
Acrocephalopolysyndactyly (Carpenter syndrome) 77–78
Acrocephalosyndactyly (Apert syndrome) 75–77
Albers-Schönberg disease 56–60
Apert syndrome (acrocephalosyndactyly) 75–77
- B**
Brachydactyly 92–93
- C**
Caffey disease (infantile cortical hyperostosis) 70
Camurati-Engelmann disease (diaphyseal dysplasia) 69
Carpal and tarsal synostosis 87–89
Carpenter syndrome (acrocephalopolysyndactyly) 77
Chondrodysplasia punctata 20
Chondro-ectodermal dysplasia (Ellis-van-Creveld syndrome) 132
Chromosome 1
Cleidocranial dysplasia 125–128
Conradi-Hunerman syndrome 21
Costovertebral segmentation anomalies 80–83
Craniodiaphyseal dysplasia 73
Cranio-facial dysostosis (Crouzon syndrome) 74
Cranio-metaphyseal dysplasia 65
Cranio-stenosis 74
Crouzon syndrome (cranio-facial dysostosis) 75
- D**
Diaphyseal aclasia (multiple exostoses) 106–108
Diaphyseal dysplasia (Camurati-Engelmann disease) 69
Diastrophic dysplasia 41–44
Digital anomalies 89–94
Dyggve-Melchior-Clausen syndrome 46
Dyschondrosteosis 134–136
Dysplasia epiphysealis hemimelica 22–23
- E**
Ectrodactyly 93
- E**
Ellis-van-Creveld syndrome (chondro-ectodermal dysplasia) 132
Enchondromatosis (Ollier disease) 109–111
Endosteal hyperostosis 71
- F**
Fibrous dysplasia 114–116
Fibrodysplasia ossificans progressiva 116–119
Foetal warfarin syndrome 21
Frontometaphyseal dysplasia 72
- G**
Gaucher disease 102–104
Gene disorders 2
- H**
Homocystinuria 129
Humero-radial synostosis 87
Hypochondroplasia 29
Hypophosphataemia 33
- I**
Idiopathic osteolysis 54
Infantile cortical hyperostosis (Caffey disease) 70
- K**
Klippel-Feil syndrome 79
Kniest disease 46
- L**
Larsen syndrome 130
Leontiasis ossium 73
Limb reduction defects 87
- M**
Madelung deformity 134
Marfan syndrome 128
McCune-Albright syndrome 115
Melorheostosis 122
Metaphyseal chondrodysplasia 30
Schmid type 30
Jansen type 32
McKusick type 32
Metaphyseal dysplasia (Pyle disease) 68
Metatropic dysplasia 44
Mesomelic dysplasia 136
Mucopolysaccharidoses 96
Hurler syndrome 97

- Hunter syndrome 97
 Morquio syndrome 99
 Multiple epiphyseal dysplasia 19
 Multiple exostoses (diaphyseal aclasia) 106

Neuromatosis (von Recklinghausen disease) 111

Ollier disease (enchondromatosis) 109–111
 Osteodysplasty 73
 Osteogenesis imperfecta 48
 congenita type 48
 tarda type 49
 Osteolysis, idiopathic 54
 Osteopathia striata 124
 Osteopetrosis 56
 Osteopoikilosis 121

Parastremmatic dysplasia 45
 Polydactyly 90
 Polyostotic fibrous dysplasia 114
 Polysyndactyly 90
 Pseudoachondroplasia 38
 Pycnodysostosis 61
 Pyle disease (metaphyseal dysplasia) 68

Radio-ulnar synostosis 87
 Rickets–differential diagnosis 33

Schwartz syndrome 133
 Sclerosteosis 71
 Spondylocostal dysostosis 80
 Spondylo-epi-metaphyseal dysplasia 45
 Spondyloepiphyseal dysplasia 38
 Spondylometaphyseal dysplasia 44
 Spondylothoracic dysostosis 81
 Sprengel deformity 83
 Stippled epiphyses 21
 Symphalangism 92
 Syndactyly 90
 Synostosis syndrome 86

van Buchem disease (endosteal hyperostosis) 71
 Vitamin D-resistant rickets 33–35
 von Recklinghausen disease (neurofibromatosis) 111

Worth type of endosteal hyperostosis 71

Bone Dysplasias of Infancy

A Radiological Atlas

Foreword from R. O. Murray
1978. 55 figures in 124 separate illustrations,
4 tables. XIII, 109 pages
ISBN 3-540-08816-4

Contents: Clinical and Genetic Evaluation of the Neonate with Skeletal Dysplasia. – Radiographic Techniques. – Achondrogenesis. – Thanatophoric Dysplasia. – Asphyxiating Thoracic Dysplasia. – Chondroectodermal Dysplasia. – Lethal Short Rib-Polydactyly Syndromes. – Chondrodysplasia Punctata. – Campomelic Dysplasia. – Achondroplasia. – Diastrophic Dysplasia. – Metatropic Dysplasia. – Spondyloepiphyseal Dysplasia Congenita. – Mesomelic Dysplasia. – Larsen Syndrome. – Cleido-Cranial Dysplasia. – Osteogenesis Imperfecta Congenita. – Hypophosphatasia. – Osteopetrosis and Other Sclerosing Bone Dysplasias.

from the reviews:

“The recent explosion of publications on general skeletal dysplasias is continued in this admirable and profusely illustrated little book emanating from the Departments of Radiology and of Human Genetics in the University of Cape Town. Its origins set the tone, the main emphasis falling on the radiological appearances, these being the most important diagnostic feature in infancy, and on the prognosis, especially the genetic prognosis, so that whenever possible the parents may receive suitable counselling. The book is especially directed towards those in training in the radiology of the newborn, but is of equal importance to obstetricians and paediatricians, and also to orthopaedic surgeons whose opinion may be sought... a most successful venture and a useful reference book on a subject uncommonly seen outside specialist units; we look forward to further contributions from this very progressive school.”

The Journal of Bone and Joint Surgery

“The authors point out the field has not as yet been completely explored. But what they do present not only indicates the value of many new diagnostic techniques in the early recognition of these disorders, but offers an accurate prognosis for many of these affected children.”

Orthopaedic Review

Springer-Verlag Berlin Heidelberg New York

P. Beighton, B. J. Cremin

Sclerosing Bone Dysplasias

Foreword by H. G. Jacobson

1980. 62 figures in 218 separate illustrations.
IX, 191 pages
ISBN 3-540-09471-7

Contents: Introduction. – History and Nomenclature. – Clinical and Genetic Aspects. – Radiologic Considerations. – Osteopetrosis. – Pycnodysostosis. – Metaphyseal Dysplasia (Pyle Disease) – Craniometaphyseal Dysplasia. – Craniodiaphyseal Dysplasia. – Frontometaphyseal Dysplasia. – Osteodysplasty (Melnick-Needles Syndrome). – Dysosteosclerosis. – Endosteal Hyperostosis. – Sclerosteosis. – Diaphyseal Dysplasia (Camurati-Engelmann Disease). – Osteopathia Striata. – Osteopoikilosis. – Melorheostosis. – Osteoectasia with Hyperphosphatasia. – Infantile Cortical Hyperostosis (Caffey Disease). – Oculodento-Osseous Dysplasia. – Miscellaneous Sclerosing Dysplasias. – Differential Diagnosis: Other Sclerosing Disorders. – Subject Index.

from the reviews:

“Professors Beighton and Cremin have done it again! The University of Cape Town team of medical geneticist and radiologist have produced another excellent book, which is a worthy successor to their *Bone Dysplasias of Infancy* published in 1978 and widely acclaimed. No fewer than 17 sclerosing bone dysplasias are treated in separate chapters under the headings historical and nosological considerations, clinical features, radiographic manifestations, and comment. At the end of each chapter there is a list of useful references as well as a number of illustrations of high-quality radiographs and, where appropriate, clinical photographs. Some chapters contain tables which will prove extremely useful in distinguishing one disease from another, or even the autosomal dominant form of a condition from the recessive type.”

South African Medical Journal

“Beighton and Cremin have combined their skills in genetics and radiology to write a fascinating book on sclerosing bone dysplasias. The area is small, and so is the book (191 pages). However, the coverage appears to be complete and the discussions are concise and easy to read. The illustrations are of excellent technical quality and include both radiographs and pertinent clinical photographs. The references are more than adequate.”

The Journal of Bone and Joint Surgery

“...for the person who is interested in the less common orthopedic disorders, and particularly for the pediatric orthopedist, this volume represents a quantum leap in clarity and well-organized content.”

Orthopedics

F. Schajowicz

Tumors and Tumorlike Lesions of Bone and Joints

1981. 948 figures, 2 color inserts.

XIV, 581 pages

ISBN 3-540-90492-1
