

# Index

- Alpha Centauri 267, 287–289
- ASAP (Ariane structure for auxiliary payloads) 107–108, 231, 238
- Celestial races 6–7
- CFRP (carbon fibre reinforced plastic) 105, 107–108, 247
- Characteristic accelerations:
  - $a_0$  14
  - Earth, Mars, Mercury and Venus 200
  - Lagrange point equilibrium solutions 255
  - Type I, II and III orbits 177
- Clarke, Arthur C. 4
- CLCB (continuous longeron coilable boom) 69–70, 76, 108
- CNES (Centre National d'Etudes Spatiales) 6, 238
- Comet chasing 5–6
- Configuration, *see* Design
- Design:
  - case studies 99–109
    - CCL (Cambridge Consultants Ltd) 105–107
    - JHU (Johns Hopkins University) 103–104
    - MIT (Massachusetts Institute of Technology) 104–105
    - ODISSEE mission 107–109
    - U3P (Union pour la Promotion de la Propulsion Photonique) 102–103
    - WSF (World Space Foundation) 99–102
  - configurations 71–99
    - high-performance solar sails 95–97
    - micro-solar sails 97–99
    - optimum 72–76
    - solar photon thruster 91–95
    - spin-stabilised disc sail 89–91
      - control 91
      - design 89–90
      - sail shape 90–91
    - spin-stabilised heliogyro 81–89
      - blade shape 83–88
      - control 88–89
      - design 81–83
    - three-axis stabilised square sail 76–81
      - control 76–81
      - design 76
  - mass properties 100
  - parameters 57–60
  - performance estimates 100
  - sail films 60–69
    - coatings 62–64
    - design considerations 60–61
    - environmental effects 66–67
    - metallic 64–66
    - sail bonding, folding and packing 67–69
    - substrates 61–62
  - sensitivity functions 60
  - structures 69–71

- Disc solar sail, *see* Design; Practicalities of solar sailing
- Drexler, Eric 66
- Early optimism 3
- Earth–Mars spiral trajectories 134
- EDM (engineering development mission) 99
- Encke comet 23, 249–250
- Forward, Robert 24–25, 57, 91, 253, 271, 288
- Fresnel zone lens 272, 284–285, 287, 289, 292
- Future development:  
 autonomous explorers 27–28  
 near term 25–27  
 speculation 28–29
- Garwin, Richard 3–4, 10
- Geostorm mission, *see* Missions
- Halley's comet 5–7, 10, 23, 27, 46, 50–51, 53, 71, 76, 83, 249
- Hedgepath, John 5
- Heliogyro configuration, *see* Design; Practicalities of solar sailing
- History 1, 31  
 lessons 10–11
- HPSS (high-performance solar sail) 96
- IAE (inflatable antenna experiment) 8, 70, 233, 236–237
- Internet websites 31
- JPL (Jet Propulsion Laboratory) 5–6, 9, 23, 26–27, 46, 50–51, 53, 71, 76, 83, 239, 249
- Kapton 61–64, 68, 88, 95, 99, 103–104, 107–108, 233, 236, 241, 249, 289
- Kepler's third law 121, 131, 182
- Kepler, Johannes 20, 33, 121–124, 131, 183, 185, 194–195, 205
- Laser-driven light sails:  
 design 281–287  
 films 281–283  
 impact damage 285–287  
 interstellar drag 285–287  
 laser systems 283–284  
 optical collimating systems 284–285
- mechanics 274–281  
 classical 275–278  
 boost–coast 278  
 terminal speed 275–278  
 efficiency 274–275  
 relativistic 278–281  
 mission applications 287–291  
 interstellar precursor 287–288  
 interstellar probe 288–291  
 physics 272–274
- Lebedew, Peter 2, 34
- Lightness numbers:  
 Lagrange point equilibrium solutions 255  
 Type I, II and III orbits 177
- MacNeal, Richard 5
- Maxwell, James Clerk 2, 34, 36, 38
- MEMS (micro-electromechanical systems) 57, 99, 258
- Mercury orbiter missions, *see* Missions; Mission application case studies
- Micro-solar sail 57, 97–99, 109, 257–258
- Mission application case studies:  
 Geostorm 231–238  
 background 231–233  
 concept 233–234  
 orbit 234–235  
 solar sail design 236–238
- Mercury orbiter 243–247  
 background 243  
 concept 243–244  
 further reading 268  
 orbit 244–247  
 solar sail design 247
- micro-solar sail constellations 257–258  
 background 257  
 concepts 257–258
- non-Keplerian orbits 258–260  
 planet-centred 260  
 Sun-centred 258–260
- outer solar system 260–267  
 550 au and beyond 266–267  
 Aurora mission 266  
 background 260–262  
 orbit 262–264  
 outer planet 264–266

- Polar Observer 250–256
  - background 250–251
  - concept 251–254
  - orbit 254–256
- sample return 247–250
  - background 247–249
  - concepts 249–250
- Solar Polar 238–242
  - background 238–239
  - concept 239–241
  - further reading 268

  - sail design 241–242
- VIGIWIND 238
- Mission applications 19–25
  - inner solar system missions 21–23
  - non-Keplerian orbits 24–25
  - outer solar system missions 23–24
- Missions:
  - Geostorm 27, 230–231, 233–234, 236–238, 251, 254, 256, 267–268
  - Mercury orbiter 27, 230, 243, 245, 247, 267
  - Solar Probe 21
  - Ulysses solar polar 171, 239, 258
- Murray, Bruce 5
- Mylar 61–62, 66, 71, 238
  
- Newton's third law 1
- NOAA 232–234, 251
- Non-Keplerian orbits 19–20, 24, 171, 228, 258–260
  - effect of a real solar sail model 224–226
  - patched 195
  - planet-centred 196–213
    - control 206–209
      - by variable sail area 209
    - patched 211–213
    - to a Keplerian orbit 211
    - to a non-Keplerian orbit 211–213
  - solutions 197–203
    - Type I 199–200
    - Type II 201
    - Type III 202–203
  - stability 203–206
    - Type I 205
    - Type II 205–206
    - Type III 206
- restricted three-body systems 214–224
  - classical problem 214–215
  - equilibrium solutions 215–217
    - Earth–Sun system 219–220
    - regions of existence 218
    - stability 221–222
  - lunar Lagrange point 223–224
- Sun-centred 173–196
  - control 188–193
    - by fixed sail pitch 190–193
    - by variable sail elevation 190
  - patched 193–196
    - to a Keplerian orbit 194–195
    - to a non-Keplerian orbit 195–196
  - solutions 173–180
    - other orbit families 180
    - Type I 176–178
    - Type II 178–180
    - Type III 179
  - stability 180–188
    - levitated solar sail 185–188
    - linearisation 180–183
    - of orbit types 183–185
- ODISSEE solar sail 108
