# Index

## A

Absolute error, 25  
Achilles and the Tortoise, 298  
Ackermann numbers, 268–272  
Ackermann’s function, 306  
Algorithm, 4, 398  
Antecedent, 85  
Antisymmetric, 235  
Approximation errors, 23–26  
Arcs, 214  
Argument, 89  
Arithmetic sequence, 107  
Asymptotically dominated, 251  
Asymptotically equivalent to, 256  
Asymptotic dominance, 250–255  
Asymptotic ranking, 259–260  
Average-case complexity, 316, 325, 335, 367, 384–390

## B

Back-tracking, 201  
Bad Banana Theorem, 60–61  
BetterBubbleSort, 154  
Bi-conditional operator, 87  
Big-Oh notation, 250–255  
Big-Theta notation, 256–258  
Binary search, 134  
Binary system, 27  
Binary tree, 139, 157  
Binomial coefficients, 60  
Binomial distribution, 373–374  
Binomial experiment, 370  
Binomial theorem, 60, 124  
Bisection algorithm, 37–41  
Bounded, 70  
Branching diagram, 139, 155  
Breadth-first traversal, 202–208  
Bridge, 230  
BubbleSort, 150–153

## C

Call frame, 168  
Cantor’s diagonalization process, 100–102  
Cardinality, 47  
Cartesian product, 48  
Casting out nines, 7–8, 119  
Center, 230  
Characteristic equation, 291  
Characteristic sequence, 53  
Church-Turing Thesis, 405  
Circuit, 191  
Clay Mathematics Institute, 190  
Closed, 191  
Common difference, 108  
Common ratio, 110  
Comparability property, 235  
Components, 230  
Compound interest, 276–277  
Conclusion, 89  
Conditional  
  expectation, 382–384  
  operator, 85  
  probability, 359  
  syllogism, 91  
Conjunction, 82  
Connected, 191  
Consequent, 85  
Contrapositive, 85  
Converges, 69  
Converse, 85  
Cookie problems, 77–82  
Cycle, 215

## D

Decreasing, 69  
Degree, 188  
De Morgan’s Laws, 84  
Depth-first search, 195  
Depth-first traversal, 195–202

- Derangements, 266–268  
 Diagnostic test, 361–365  
 Diameter, 230  
 Digraph, 214  
 Dijkstra's algorithm, 217–224  
 Dipath, 214  
 Directed graph, 214  
 Directed graph representation, 235  
 Directed path, 214  
 Direct proof, 96–97  
 Disjoint, 47  
 Disjunction, 83  
 Disjunctive syllogism, 94  
 Distance function, 216  
 Dominated by, 245
- E**
- Edges, 187  
 Edge-weighted graphs, 209–214  
 Element, 43  
 Ellipses, 106  
 Empty set, 45  
 Equally likely, 354  
 Equivalence class, 237  
 Equivalence relation, 236  
 Equivalent, 84  
 Euclid's algorithm, 19, 287–290  
 Euler circuit, 188  
 Eulerian graphs, 188–189  
 Euler tour, 188  
 Events, 353  
 Exchange sorts, 150–152  
 Exclusive or, 83  
 Existential quantifier, 88  
 Expected frequency, 366  
 Expected value, 367  
 Experiment, 352
- F**
- False positives, 362  
 Fibonacci sequence, 278–290  
 Finish-end, 214  
 First order linear recurrence equations, 272–277  
 Forest, 230  
 Full binary tree, 145  
 Full permutations, 57  
 Full permutations of  $\{1..n\}$ , 333–337  
 Function, 51
- G**
- Generalized conditional syllogism, 96–97  
 General solution, 265  
 General solution of the Fibonacci RE, 283–285  
 Geometric distribution, 374–377  
 Geometric sequence, 68, 110  
 Golden ratio, 282–283  
 Graph, 187  
 Gray code, 319  
 Greatest common divisor, 18–21  
 Greedy algorithm, 78–82
- H**
- Halting problem, 406–409  
 Hamilton circuit, 189  
 Hamiltonian graphs, 189–190  
 Hamilton tour, 189  
 Harmonic sequence, 303  
 Hasse diagram, 241  
 Height of the tree, 157  
 Hilbert's problems, 397  
 Homogeneous, 290
- I**
- Implies, 86  
 Inclusive or, 83  
 Increasing, 69  
 Independent events, 360  
 Indirect proof, 97–98  
 Infinite series, 298–305  
 In-neighbours, 214  
 InsertionSort, 180, 393  
 Internal vertices, 139, 157  
 Intersection, 47  
 Inverse, 85
- K**
- Key, 131  
 Knapsack problem, 311  
 Konigsberg Bridge Problem, 184  
 K-permutation, 56  
 K-permutations of  $\{1..n\}$ , 338–343  
 K-sequences on  $\{1..n\}$ , 316–320  
 K-subsets of  $\{1..n\}$ , 322
- L**
- Leaf, 157  
 Leaves, 139  
 Lemma, 121  
 Lexicographic first, 313  
 Lexicographic next, 313–314  
 Lexicographic order, 247, 313–315  
 Linear search, 132, 384–385  
 Little-Oh notation, 260–262

- Logarithm, 17  
 Loop invariant, 115  
 Lower order, 259
- M**
- Mathematical induction, 102–113  
 Matrix representation, 234  
 Maximal/Maximum, 242  
 Minimal/Minimum, 242  
 Minimum connector problem, 209  
 Minimum-cost spanning tree, 209  
 MinSort, 149–150  
 Missionaries and Cannibals Problem, 183–184  
 Modus Ponens, 90  
 Modus Tollens, 90–91  
 Monotone, 69  
 Mutually disjoint, 48  
 Mutually exclusive events, 360
- N**
- Nearest integer, 268  
 Negation, 82  
 Neighbours, 188  
 Newton's method for square roots, 35–37  
 N-factorial, 57  
 Nonincreasing, 69  
 N-sequence, 52  
 N-set, 47  
 Numerical solutions, 35–41
- O**
- One-to-one, 51  
 Onto, 51  
 Ordered pair, 48  
 Order of the Fibonacci sequence, 286–287  
 Order relation, 240  
 Out-neighbors, 214
- P**
- Palindrome, 400  
 Parallel, 188  
 Partial order, 240  
 Particular solution, 274, 294  
 Partition, 48  
 Partition sorts, 165–171  
 Path, 188  
 Permutation, 56  
 Pigeonhole principle, 49  
 Polygon, 192  
 Post-condition, 40
- Power set, 45  
 Preconditions, 39  
 Predicate, 88  
 Premises, 89  
 Prime, 9  
 Prime factorization, 14–16  
 Prime testing, 9–11  
 Probabilistic model, 352  
 Probability
  - distribution, 368
  - function, 353
 Product rule, 49  
 Proof, 93  
 Proof by Cases, 94
- Q**
- QuickSort, 165–173, 385–390  
 QuickSort2, 173–177  
 Quintuples, 398
- R**
- Radius, 230  
 Random, 354  
 Random variable, 365  
 Rational number, 24, 44  
 Reachable, 215  
 Recurrence equation, 108, 110, 265  
 Recursive algorithm, 165  
 Recursive calls, 171  
 Reflexive, 235  
 Relation, 234  
 Relative complement, 59  
 Relative error, 25  
 Ringing the changes, 347  
 Root, 157  
 Rooted, 139  
 Rounding, 25  
 Round-off errors, 296–297  
 Russian Peasant Multiplication, 1–2, 115
- S**
- Sample space, 352  
 Searching, 131  
 Second order linear recurrence equations, 290–297  
 Selection sorts, 147–150  
 Sensitivity, 361  
 Sequence, 52  
 Series, 52  
 Set, 43  
 Set-difference, 47

Sigma-notation, 53  
Simple digraph, 214  
Simple dipath, 215  
Simple graph, 188  
Simple path, 191  
Sorting, 147–179  
Spanning sub-graph, 192  
Specificity, 362  
Start-end, 214  
Strictly-parallel, 214  
Strong induction, 113  
Strongly asymptotically dominated by, 260  
Strongly-connected, 215  
Subset, 45  
Subsets of  $\{1..n\}$ , 320–330  
Symmetric, 235

**T**

Tartaglia's Pouring Problem, 183  
Telescoping series, 121  
Theorems, 93  
Total order, 240  
Towers of Hanoi, 70–73, 274  
Transitive, 235  
Traveling salesman's problem, 312  
Tree, 194

Tree diagrams, 64  
Tree of Recursive Calls, 280  
Trivial path, 191  
Truncation, 24  
Truth table, 82  
Turing machine, 398

**U**

Uniform distribution, 369–373  
Union, 47  
Universal quantifier, 88  
Universal Turing machine, 406

**V**

Valid, 90  
Vertices, 187

**W**

Weight of a path, 213  
Well-Ordering Principle, 102

**Z**

Zeno's paradoxes, 298–299
