Index

A

Articulated rigid-body systems
- collision detection, 268
- collision response, 270
- constraint function, 248
- cylindrical joints, 261
- dynamic equations, 246
- overview of multiple joint systems, 265
- overview of single joint systems, 252
- prismatic joints, 263
- revolute joints, 258
- rigid joints, 264
- single or multiple external collisions, 271
- single or multiple external contacts, 273
- spherical joints, 255
- state-vector representation, 246
- universal joints, 256

Axis-Aligned Bounding Box Tree (AABB), 32, 33

B

Bisection method, 18
Bounding rotation sphere, 20
Bounding Sphere Tree, 36–38
Box
- continuous intersection with box, 84
- intersection with box, 56
- intersection with line segment, 69
- intersection with sphere, 64
- intersection with triangle, 65

C

Closest point between a line and a line segment, 284
Closest points between convex objects
- using the Gilbert–Johnson–Keerthi (GJK) algorithm, 196
- using the Voronoi Clip algorithm, 177

Collision detection
- between convex rigid bodies, 176
- between non-convex rigid bodies, 171
- between thin or fast moving convex rigid bodies, 177
- between thin or fast moving non-convex rigid bodies, 174
- building hierarchical representations, 31
- collision time between convex objects, 21
- collision time between non-convex objects, 16
- collision time between thin or fast moving convex objects, 22
- collision time between thin or fast moving non-convex objects, 18
- computing collision or contact frames, 286
- for articulated rigid bodies, 268
- for particle–particle, 104
- for particle–rigid body collisions, 106
- Gilbert–Johnson–Keerthi (GJK) algorithm, 196
- hierarchical representations for continuous collisions, 43
- intersecting different hierarchies, 53
- overview, 14
- using signed distance fields, 361
- Voronoi Clip algorithm, 177

Collision or contact frame computation, 286
Collision response
- computing collision or contact frames, 286
- for articulated rigid bodies, 270
- for articulated rigid-body collisions, 271
- for articulated rigid-body contacts, 273
- for multiple particle–particle collisions, 120
- for multiple particle–particle contacts, 132
- for multiple rigid body–rigid body collisions, 217
- for multiple rigid body–rigid body contacts, 231
- for particle–particle collision, 112
- for particle–particle contact, 124
- for particle–rigid body collision, 139
- for particle–rigid body contact, 140, 236

M.G. Coutinho, *Guide to Dynamic Simulations of Rigid Bodies and Particle Systems*, Simulation Foundations, Methods and Applications,
DOI 10.1007/978-1-4471-4417-5, © Springer-Verlag London 2013

Collision response (*cont.*)
for rigid body–rigid body collision, 205
for signed distance fields, 362
for single rigid body–rigid body contact, 223
overview, 23
partitioned-matrix representation, 119, 122, 216, 220
Collision time
between convex objects, 21
between non-convex objects, 16
between thin or fast moving convex objects, 22
between thin or fast moving non-convex objects, 18
Conservative time advancement
overview, 365
time estimate, 367
Constrained force fields
applied to particles, 99
Constraint function
for articulated rigid-body systems, 248
Constraint system
force-based, 250
impulse-based, 250
position-based, 249
Contact force computation
contact with friction, 379
for a single particle–particle contact, 124
for articulated rigid-body contacts, 273
for multiple particle–particle contacts, 132
for multiple rigid body–rigid body contacts, 231
for particle–rigid body contact, 140, 236
for single rigid body–rigid body contact, 223
frictionless contact, 371
Continuous collisions
box–box, 84
building hierarchical representations, 43
sphere–sphere, 82
triangle–triangle, 76
Convex decomposition
computation using Joe's algorithm, 343
finding cut planes, 344
introduction, 341
termination conditions, 348
tracing cut faces from cut planes, 346
Convex hull, 39–42
Covariance matrix, 34, 36
Critical coefficient of friction, 117, 211
Cross-product
matrix–vector representation, 287
Cylindrical joints, 261

D

Damped springs
connecting particles, 97
connecting rigid bodies, 168
Divergence theorem, 321
Dynamic simulation
collision detection, 14
collision response, 23
collision time between convex objects, 21
collision time between non-convex objects, 16
collision time between thin or fast moving convex objects, 22
collision time between thin or fast moving non-convex objects, 18
design principles, 9
interfacing with renderer, 9
numerical integration, 12
overview, 5

E

Emitter
of particles, 141
user-definable parameters, 143
Euler integration
explicit, 294
implicit, 295

F

For particle–rigid body collision, 139
Force fields
applied to particles, 99, 100
Force-based constraint system, 250
Friction
critical coefficient, 117, 211

G

Gilbert–Johnson–Keerthi (GJK) algorithm, 196
Gradient
from signed distance at a point, 360
Gravitational force
applied to particles, 96
applied to rigid bodies, 167
Green's theorem, 325
Grid cell size
computation for multi-level grids, 49
computation for signed distance field grids, 353
computation for uniform grids, 46

H
Hierarchical representations
Axis-Aligned Bounding Boxes (AABB), 32
Bounding Spheres (BS), 36
convex hull, 39
for continuous collisions, 43, 53
intersecting different hierarchies, 53, 54
multi-level grid, 48
of the simulated world, 44
Oriented Bounding Boxes (OBB), 33
overview, 29
self-intersection, 55
uniform grid, 45

I
Impulse-based constraint system, 250
Impulsive-force computation
for articulated rigid-body collisions, 271
for multiple particle–particle collisions, 120
for multiple rigid body–rigid body collisions, 217
for particle–particle collision, 112
for rigid body–rigid body collision, 205
partitioned-matrix representation, 119, 122, 216, 220
Inclusion test
point-in-object, 74
point-in-triangle, 72
vertex-in-object, 75
Interpolation of positions and orientations, 288
Intersection
between different hierarchies, 54
between same hierarchy, 55
box–box, 56
box–line segment, 69
box–sphere, 64
box–triangle, 65
continuous box–box, 84
continuous sphere–sphere, 82
continuous triangle–triangle, 76
edge–edge, 72
plane–line segment, 283
point-in-object test, 74
point-in-triangle test, 72
sphere–line segment, 67
sphere–sphere, 59
sphere–triangle, 66
triangle–line segment, 68
triangle–triangle, 61
vertex-in-object test, 75

J
Joints
cylindrical, 261
prismatic, 263
revolute, 258
rigid, 264
spherical, 255
universal, 256

L
Lagrange multipliers, 252
Line segment
closest point to a line, 284
intersection with box, 69
intersection with line segment, 72
intersection with plane, 283
intersection with sphere, 67
intersection with triangle, 68
Linear complementarity
computation using Baraff's algorithm, 379
computation using Dantzig's algorithm, 371
contact force in particle systems, 128
contact force in rigid-body systems, 227
introduction, 369

M
Mass properties
computation using Mirtich's algorithm, 318
computing line integrals, 327
of rigid bodies, 317
projected surface to line integral reduction, 325
surface to projected surface integral reduction, 322
volume to surface integral reduction, 321
Matrix representation
of cross-product, 287
of multiple particle–particle collisions, 122
of multiple rigid body–rigid body collisions, 220
of particle–particle collision, 119
of rigid body–rigid body collision, 216
Mean vector, 34, 36
Multilevel-grid decomposition, 48–52
Multiple joint systems, 265

N
Numerical integration
overview, 12

O
Ordinary differential equations
Euler method, 294

Ordinary differential equations (*cont.*)
introduction, 291
Runge–Kutta method, 298
using adaptive time steps, 13, 302
using fixed time steps, 13
Oriented Bounding Box Tree (OBB), 33–36

P
Parallel-axis theorem, 320
Particle emitter
overview, 141
user-definable parameters, 143
Particle system
critical coefficient of friction, 117
Particle systems
detecting particle–particle collisions, 104
detecting particle–rigid body collisions, 106
dynamic equations, 91
introduction, 89
Linear Complementarity Problem with friction, 379
Linear Complementarity Problem without friction, 371
multiple particle–particle collisions, 120
multiple particle–particle contacts, 132
overview of Smoothed Particle Hydrodynamics, 148
particle emitter, 141
particle–particle collision response, 111
particle–particle contact, 124
particle–rigid body collision, 137
particle–rigid body contact, 140, 236
simulation overview, 92–95
state-vector representation, 92
time derivative of normal vector at particle–particle contact, 330
time derivative of tangent vector of a collision or contact, 333
user-definable parameters, 143
user-interaction force, 103
using damped springs with, 97
using gravity with, 96
using spatially dependent forces with, 98
using viscous drag with, 97
Plane
intersection with line segment, 283
Position-based constraint system, 249
Prismatic joints, 263
Projections
point on line, 282
point on plane, 282

Q
Quaternions
addition, 308
advantages over rotation matrices, 313
conjugate, 310
dot product, 308
introduction, 307
inverse, 310
module, 310
multiplication, 308
time derivative, 335
unit quaternions representing rotations, 311

R
Ray
closest point to a line segment, 284
intersection with box, 69
intersection with plane, 283
intersection with sphere, 67
intersection with triangle, 68
Revolute joints, 258
Rigid joints, 264
Rigid-body system
critical coefficient of friction, 211
Rigid-body systems
collision detection, 169
collision detection between convex bodies, 176
collision detection between non-convex bodies, 171
collision detection between thin or fast moving convex bodies, 177
collision detection between thin or fast moving non-convex bodies, 174
detecting particle–rigid body collisions, 106
dynamic equations, 158
impulsive-force for rigid body–rigid body collision, 205
interaction forces, 166
Linear Complementarity Problem with friction, 379
Linear Complementarity Problem without friction, 371
mass properties, 317
multiple rigid body–rigid body collisions, 217
multiple rigid body–rigid body contacts, 231
particle–rigid body collision, 137
particle–rigid body contact, 140, 236
simulation overview, 163–166
single rigid body–rigid body contact, 223
state-vector representation, 162

time derivative of a vector, 329
time derivative of normal at rigid body–rigid body contact, 331
time derivative of tangent vector of a collision or contact, 333
user-interaction force, 169
using damped springs with, 168
using gravity with, 167
using viscous drag with, 167
Rotation-matrix representation
time derivative of, 334
Rotation-matrix representation of unit quaternions, 311
Runge–Kutta integration
of fourth order, 300
of second order, 298

S

Scanline rasterization, 354
Separating-axis theorem, 56
Signed Distance
at a point, 358
at grid vertices, 356
Signed Distance Fields
closest point to zero iso-contour, 361
collision detection, 361
collision response, 362
computing grid cell size, 353
gradient at a point, 360
memory efficient representation, 352
overview, 351
scanline rasterization, 354
signed distance at a point, 358
signed distance at grid vertex, 356
Single joint systems
overview, 252
Smoothed Particle Hydrodynamics, 148
Sphere
continuous intersection with sphere, 82
intersection with box, 64
intersection with line segment, 67
intersection with sphere, 59
intersection with triangle, 66
Spherical joints, 255
State-vector representation
for articulated rigid-body systems, 246
for particle systems, 92
for rigid-body systems, 162

T

Time derivative
of a rotation matrix, 334
of a unit quaternion, 335
of a vector attached to a rigid body, 329
of normal vector at particle–particle contact, 330
of normal vector at rigid body–rigid body contact, 331
of tangent plane of a collision or contact, 333
Triangle
continuous intersection with triangle, 76
intersection with box, 65
intersection with line segment, 68
intersection with sphere, 66
intersection with triangle, 61
point-in-triangle test, 72

U

Unconstrained force fields
applied to particles, 100
Uniform-grid decomposition, 45–48
Universal joints, 256
User interaction
with particles, 103
with rigid bodies, 169

V

Viscous drag
applied to particles, 97
applied to rigid bodies, 167
Voronoi Clip algorithm, 177
