

Index

A

Arrhenius kinetics, 5
Artificial compression, 70

B

Balance law, 1
Breakdown of smooth solutions,
13, 31
time, 13
Burgers' equation, 2

C

Chapman-Jouget theory, 8
Combustion theory, 2
inviscid, 5
Condition E, Oleinik's, 117
Conservation law, 1
Continuation principle, 31, 65
sharp, 46

Convective derivative, 4

D

Detonation fronts, 8
Diffusion mechanisms, 7
Dissipative mechanisms, 7
Dissipative mixed problems, 139

E

Elasticity, nonlinear, 2, 7
Energy of formation, 6
Energy principle, 11
Entropy condition, 3, 8
inequality, Lax's geometric, 112,
117
Entropy waves, 11
Euler equations, 2
compressible, 3
Eulerian coordinates, 34
Existence theorem, classical, 30

F

Flame front, 8
Flux function, 1
Free boundary problem, 11

G

γ gas law (gamma gas law), see ideal
gas
Gas dynamics, 2
Genuine nonlinearity, 15
Geometric optics, 21
nonlinear, 16
Geometric shock inequalities, 115

H

Heat conduction, 7
 Huyghen's principle, 83

I

Ideal gas, 4, 5
 Incompressible combustion, 77
 Incompressible limit, 32
 Initial boundary value problem,
 stability, 138
 Interval of existence, maximal,
 33
 Isentropic gas dynamics, 5
 linearized shock fronts for,
 137

L

Lagrangian coordinates, 34
 Linear acoustics, 67
 Linearly degenerate systems, 14,
 98, 103
 Linearized shock fronts, 113, 132
 estimates for, 147
 for isentropic flow, 137
 regularity of, 148
 Local existence, 33
 Lopatinski condition, uniform,
 143
 Low Mach number combustion, 72

M

Mach number, 52
 Mach stem, 126
 Magneto fluid dynamics, 2
 Mass coordinate, 6
 Maximal interval of existence, 33
 Mixed hyperbolic problems, 138
 Moser calculus inequalities, 43
 Multiple scales, method of, 16

N

Non-Hookian material, 7
 Nonlinear geometric optics, 16
 Nonlinear plane waves, 13
 Nonlinear structural conditions, 57
 Nonlinear wave equation, 6
 Normal Mach number for shocks, 115
 Normal mode analysis, 141
 Numerical methods, 3

P

Petroleum reservoir modelling, 2
 Plane waves, 12, 88

R

Rankine-Hugoniot conditions, 3
 Reaction diffusion equations, 34
 Riemann invariants, 95

S

Shallow water theory, 2, 5
 Sharp continuation principle, 46
 Shock formation, 32, 81
 for periodic data, 105
 Shock front, 3
 existence of, 124
 initial data, 117
 stability of, 111, 135
 Shock inequalities, Lax's geometric,
 115
 Simple waves, 13
 Singular limits, 32
 Small Diffusion approximation, 23
 Smooth solutions, breakdown of, 3, 11
 existence of, 30
 Sound waves, 10
 Source term, 1
 Species diffusion, 7

- Stability estimate, 11
 of shock fronts, 111
- State space, 1
- Stress strain relation, 7
- Symmetrizer, 9
- T
- Thermodynamics, 4
- U
- Uniformly local Sobolev spaces,
 48
- V
- Virtual work, principle of, 1
- Viscosity, 7
 criterion for shocks, 116
- Vortex sheet, 3
- Vorticity waves, 11
- W
- Weak solution, 1
- Weakly nonlinear acoustics, 16
- Well posedness of shock front problems,
 111, 133
- Z
- Zero Mach number limit, 34
