

Index

- Ackermann numbers, 60
Adams, J. F., 235
Addition
 associative law of, 216
 by geometry, 215
 in Hackenbush game, 287
 of numbers, 293
Additive pattern, 74
Aleph zero (\aleph_0), 25, 278
Algebra
 geometry and, 27-62
 shuffles and, 167
Algebraic equations, 194
 for girls and boys, 205-206
Algebraic numbers, 23, 189-190
 in arithmetic problems,
 202-205
 of degree three, 190-191
 of degree two, 190
 geometry and, 181-210
"Ambi," "amphi-" words, 6
Angle(s), 195-197
 bisectors of, 199, 202
 neusis trisection of, 195
 trisectors of, 198-199
Apéry's number, 261-262
Arabic number system, 18,
 20-21
Archimedean solids, 53
Archimedes
 neusis trisection of angle, 195
 and pi (π), 238
Arithmetic, geometry and, 27-62
 modulo p , 130-132
 problems, algebraic numbers in,
 202-205
 progression, 35-38
Arrangement numbers, 66
Arrow notation, 60
Artin, Emil, 170
Associative law
 of addition, 216
 of multiplication, 216
Astronomy, 17-18, 175
Axiom of choice, 274-275
Axis, 199
Babylonian cuneiform, 173-174,
 181-182
 numerals, 17, 20-21
Baker, Alan, 224
Baker's theorem, 254, 261
Bases, numbers in, 21
Bell, Eric Temple, 91
Bell numbers, 91-93
Berlekamp, Elwyn, 288
Bernoulli, Jacob (James), 107
Bernoulli numbers, 107-109

- Bifurcating trees, 98
Bifurcation points, 208
Billion, use of term, 13–16
Binary numbers, 21
Binary trees, 98
 exponentiations and, 103
Binomial theorem, 43, 73
Bisectors, 199, 202
“Bi-” words, 5
“Bootstrapping” rule, 85–86
Bouton, C.L., 291
Brent, Richard, 139
Brillhart, John, 139
Brown, J., 136
Buds, *see* Phyllotaxis
Bushes
 exponentials and, 103
 mountains and, 104
- Calabi, Eugenio, 206
Calabi’s triangle, 206
Calendar, 175
Cantor, Georg, 25; *see also* Cardinal numbers; Ordinal numbers and aleph zero (\aleph_0), 25 and cardinal numbers, 25 counting cards and, 279–282 infinite numbers and, 25 ordinal numbers of, 25, 266–271, 275–276
Cardinal numbers, 25, 277–279
 counting cards and, 279–282
 first infinite (\aleph_0), 278
Cards, *see* Shuffles
Carmichael numbers, 142
“Casting out the nines,” 28–29
Catalan numbers, 101
 mountains and, 105–106
Cayley, Arthur, 234
Cayley numbers, 234–235
Centred cube numbers, 52
Centred square numbers, 41, 42
“Cent-” words, 12
Chain, Hackenbush, 286, 287, 289
Choice numbers, 67–68
 as binomial coefficients, 72–74
 with repetitions, 70
- Chuquet, N., 13, 14
Circle
 degrees of, 17
 squaring of, 191
Classes, ordinal and cardinal numbers
 in, 277–278
Clausen, 109
Coefficients, 72
Cohen, Paul, 282
Colors, patterns and, 29–30
Combinations, 67
Comma of Pythagoras, 257
Compass, Euclid and, 191–192
Complex numbers, 23, 214
Composite numbers, 127
Compositions, 95
Computers, very large numbers and, 59–60
Congruence, “casting out the nines” and, 28–29
Congruent modulo n , 28
Congruent to 1 modulo 3, 28
Constructions, of Euclid, 191–192
Continued fractions, 175–179
 harmony, logarithms, and, 257
Continuum hypothesis, 282
Convergents, 178
Countable set, 278–279
Counting, *see also* Ordinal numbers of same set in different ways, 275–276
 from zero, 265–266
Counting cards, 279–282
Counting numbers, 69
Cube numbers, centred, 52
Cubes, 42
 sums of, 57–58
 tesseract as, 55
 very large numbers and, 59
Cuneiform script, 17, 173, 174, 181–182
Cycle, Metonic, 175
- Decimals, fractions and, 157–163
Decimal system, 21
De Divina Proportione (Pacioli), 184
“Dec-” words, 9, 10

- Degree(s)
 algebraic numbers and, 189
 of circle, 17
- De la Roche, Emile, 14
- De la Vallée Poussin, Ch.-J., 260
- Delian number ($\sqrt[3]{2}$), 193-194
- De Moivre, Abraham, 226
- De Moivre numbers, 227, 228
 circle cutting, 226-228
 seventeenth-order, 229
- Denominator, 151
 of fractions, 157-160
 "Di-," "dis-" words, 4-6
- Diaconis, Persi, 165
- Difference table, 80; *see also* Patterns;
 Sequences
- Differencing, sequences and, 79-81
- Dimensions
 fourth, 55-59
 third, 42-44
- Diogenes, 255
- Diophantus of Alexandria, 172
- Dirichlet, G.I., 260
- Distance 3, 296, 297
- Division, by geometry, 215
- Dubois-Raymond, Paul, 299
- e*, powers of, 251-254
- Egyptian number system, 18, 19-20
- Eighty, words for, 12
- Eisenstein integers & units, 205,
 220-221, 222, 223
- Elements of Geometry, The* (Euclid),
 132
- "Eleven" through "twenty," use of
 words for, 10-11
- Empty set, 266
- Equations
 algebraic, 194
 linear, 192
 Pell, 204
 quadratic, 192
- Equilateral triangle, 206
- Eratosthenes, 127-128
- Euclid
 Mersenne primes and, 137
 number theory and, 132-133
 perfect numbers and, 139
 ruler and compass constructions,
 191-192
- Euclidean numbers, 192-193
- Euler, Leonard, 137
 prime numbers and, 225
 totient numbers of, 154-156, 167, 198
 transcendental numbers and, 253,
 254-256
- Eulerian number, $A(n, k)$, 111
- Euler-Maclaurin sum formula, 260-261
- Euler-Mascheroni number (γ), 25, 260
- Euler numbers, 110-111
- Euler's formula, for partition numbers,
 95
- Even numbers, 27
- Exponentials, bushes and, 103
- Exponentiations, trees and, 103
- Exponents, laddered, 98-100
- Factorial n , 65
- Factorial numbers, 64, 65-66
- Factors, prime, 132-133
- Factor Table for the First Ten Million*
 (Lehmer), 129-130
- Families, of numbers, 91-126
- Farey series, 152-154, 156
- Faulhaber, Johann, 106
- Faulhaber's formula, 106; *see also*
 Bernoulli numbers
- Feigenbaum's numbers, 24, 25, 208
- Fermat, Pierre de, 138
 Little Theorem of, 109, 164
 prime numbers and, 220
 prime of, 197
 sum of two squares theorem, 221
 test for primes, 141-143
- Fermat numbers, 137-141
- Fibonacci numbers, 85, 111-113,
 202-203; *see also* Phyllotaxis;
- Plants
- Fifth (interval), 256
- Finite set, 278
- "Five," use of word, 8-9
- Flowers, *see* Phyllotaxis
- Ford, Lester R., Farey series and,
 153-154

- “Four,” use of word, 8
- Four-square formula, 232
- Fourth dimension, 55-59
- Fractions, 23, 151-179
 - Babylonian table of Pythagorean, 173, 174
 - continued, 175-179
 - decimals and, 157-163
 - and gear trains, 178, 179
 - harmony, logarithms, and, 256-257
 - for irrational numbers, 186
 - long primes and, 169-171
 - prime numbers and, 147-148
 - Pythagorean, 171-173
 - as rational numbers, 151, 183
 - Roman, 22, 23
 - shuffling and, 163-168
 - Wilson’s theorem and, 168-169
- Fractions modulo p , 130-132
- Freiman, G. A., 188
- Freiman’s number, 188
- Frequency, of prime numbers, 143
- Frieze patterns, 74-76, 96-97
 - polygons and, 101
- Games
 - Hackenbush, 284-291; *see also* Green Hackenbush; Neutral Hackenbush
 - Nim, 291-298
- Gardner, Martin, 41, 225-226
- Gauss, Carl Friedrich, 11, 28
 - prime and, 139-140, 144, 146
 - regular polygon and, 193
- Gaussian integers, 217-223
- Gauss’s numbers, 244-245
- Gear trains, fractions and, 178, 179
- Generalized continuum hypothesis, 282
- Geometry
 - adding and multiplying by, 215
 - and algebraic numbers, 181-210
 - arithmetic and algebra figured with, 27-62
 - of physics, 213
 - polygons and, 198-202
- Gnomon, 32, 42
 - bending nexus numbers and, 55
 - defined, 33
 - and sums of cubes, 57-58
- Gödel, Kurt, 282
- Golden number (τ), 25, 112, 123, 184
- Golden rectangle, 184
- Golden rule, for fractions, 151
- Graham, Ron, hexagon of, 206-207
- Graham’s number, 61-62
- Greece, algebraic numbers and, 190-191
- Greek number system, 18
- Green Hackenbush, 297
- Gregory, David, 242
- Gregory numbers, 241-243, 244-245, 246, 247
- Hackenbush game, 284-291
 - Green Hackenbush, 297
 - Neutral Hackenbush, 291-292, 297, 298
- Hadamard, Jacques, 143-144
- Hamilton, William Rowan, 231, 234
- Handshakes
 - without crossing, 100
 - parentheses and, 104
- Hardy G.H., 95
- Harmonic numbers, 143, 258-259
- Harmony, fractions, logarithms, and 256-257
- “Hec-” words, 12-13
- Heegner, 224, 225
- Heilbronn, H.A., 224
- Heptadecagon, 229-230
- “Hept-” words, 10
- Hexadecimal system, 21
- Hexagon
 - folding, 185
 - Graham’s, 206-207
- Hexagonal number, 39
- Hex numbers, 41
- Hex pyramids, as cubes, 43
- Hindu-Arabic number system, 18, 20-21
- Hundred, words for, 12-13

- Hurwitz, A., 235
Hypercomplex numbers, 230–232
- “-illion” words, 13–16
Imaginary numbers, 211–214
Incommensurable numbers, 213
Infinite and infinitesimal numbers, 25, 265–299
 Cantor’s ordinal numbers, 266–271, 275–276
 counting cards and, 279–282
 Hackenbush game and, 284–291
 multiplying ordinal numbers, 271–276
 numbers and game of Nim, 291–298
 orders of infinity, 299
 Sierpiński and, 265–266
 surreal numbers and, 283–284
Infinitesimal numbers, *see* Infinite and infinitesimal numbers
Infinity, orders of, 299
Information sources, on number sequences, 89
In shuffle, 163, 164
Integers
 Gaussian, 217–223
 unique factorization into primes, 223
Integral lexicographic code, 296
Internet, number checker on, 26
Inverse Symbolic Calculator, 25, 26
Irrational numbers, 23
 continued fractions for, 186
 Pythagoras and, 257
- Jackson, Robert, sequences and, 84–85
Japanese, words for powers of ten, 16
- Kepler J., 51, 112
Khayyám, Omar, 68
Klostermark, Bernt, 248
Knuth, Donald, 15n, 60
Kulik, J. P., 130
- Laddered exponents, 98–100
Lagrange numbers, 187–189
Lagrange spectrum, 188
Lambert H., 239
Landry, F., 139
Large numbers, 59–62
Legendre, Adrienne Marie, logarithmic law of, 143–144, 146
Lehmer, Derrick Norman, 129, 130
Lehmer, Dick, 170
Leibniz’s formula, 242–243
Leonardo of Pisa, *see* Fibonacci numbers
Lindemann, Ferdinand, 25, 191, 194
 pi (π) and, 25, 239
Lindemann’s theorem, 254, 261
Linear equations, 192
Linfoot, E.H., 224
Liouville, J., 239, 241
Liouville’s number, 239–241
Littlewood, John Edensor, 145
Logarithmic law, of Legendre, 143–144
Logarithms, 248–251
 harmony, fractions, and, 256–257
Long primes, 161, 169–171
Look and say sequence, 208–209
Lowest terms, 151
Lucas, Edouard, 135
Lucas numbers, (L_n), 112, 202–203
Ludolph’s number (π), 25, 238–239
Lunnon, Fred, 87
- Machin, John, 243
Maclaurin, *see* Euler-Maclaurin sum formula
Magicians, *see* Shuffles
Markov numbers, 187–188
Markov spectrum, 189
Mascheroni, *see* Euler-Mascheroni number
Mediant fraction, 152
Meeting point, for set of numbers, 76–78
Mersenne, Marin (Father), 135
Mersenne numbers, 135–136
Metius, Adrian, 239
Metonic cycle, 175
Million, use of term, 13–16

- “Mille-” words, 12, 13–14
- Möbius number, 145
- Modulus, 30
- Moessner’s magic, 63–65
- Monge, Gaspard, shuffle of, 165
- “Mono-” words, 4
- Monster simple group, 62
- Month(s), 175
 - naming of, 9–10
- Morgan, Augustus de, 238
- Mountains, 99
 - bushes and, 103
 - Catalan numbers and, 105–106
 - parentheses and, 104
- Multiples, 27
- Multiplication
 - associative law of, 216
 - by geometry, 215
 - of numbers, 294
 - of ordinal numbers, 271–276
- Multiplication table, 30–31
 - and tetrahedral numbers, 46
- Multiplicative pattern, 75, 76
- Murray J.A.H., 14

- Names, of months, 9–10; *see also*
Words
- Napier’s number e , 25
 - continued fractions and, 186
- Negative, of Hackenbush game, 286
- Negative numbers, *see also* Gaussian integers
 - discriminants and, 224–226
 - square roots of, 211–213
- Negative remainders, 219
- Net, *see* Internet
- Neugebauer, Otto, 173
- Neusis constructions, 195
- Neutral Hackenbush, 291–292, 297, 298
- Newton, Isaac, 226
- Newton’s formula, sequences and, 81–83
- Nexus numbers, 53–54, 55
- n factorial, 65
- Nim, game of, 291–298
- Nimbers, and game of Nim, 291–298

- Nineteen, word for, 11
- Ninety, word for, 12
- Nonprime, shuffles and, 168
- “Non-” (nine) words, 10
- Norm, 232
- Notation, *see also* Number system
 - arrow, 60
 - place, 17
- “Nov-” words, 9, 10
- n th Bell number, 93
- n th harmonic number, 258–259
- n th hex number, *see* Hex numbers
- Number(s), *see also* Irrational numbers; Rational numbers
 - algebraic, 23, 181–210
 - arrangement, 66
 - cardinal, 25, 277–279
 - centred square, 41, 42
 - complex, 23
 - composite, 127
 - even, 27
 - factorial, 64, 65–66
 - golden, 184
 - hex, 41
 - hexagonal, 39
 - hypercomplex, 230–232
 - imaginary, 211–214
 - infinite, 25
 - infinite and infinitesimal, 265–299
 - irrational, 23
 - Lagrange, 187–189
 - Markov, 187–188
 - nexus, 53–54, 55
 - octahedral, 50–52, 53
 - odd, 27
 - online, internet-based checker, 26
 - ordinal, 25, 266–276
 - pentagonal, 39
 - pentatope, 55–57, 70
 - polygonal, 38–42
 - prime, 127–149
 - pronic, 34
 - rational, 23
 - rhombic dodecahedral, 53–54
 - root of word, 1
 - samples of favorite, 24
 - singly even, 30

- square, 30–33
- square pyramid, 47–49
- surreal, 25, 283–284
- tetrahedral, 44–46, 70
- transcendental, 23–25, 237–263
- triangular, 33–38, 39, 70
- use of word, 1
- very large, 59–62
- whole, 22
- word systems for, 2–16
- writing of, 17–22
- Number families, 91–126
 - Bell numbers, 91–93
 - Bernoulli numbers, 107–109
 - Catalan numbers, 101
 - Euler numbers and zigzag arrangements, 110–111
 - Faulhaber’s formula, 106
 - Fibonacci numbers, 111–113
 - laddered exponents, 98–100
 - partition numbers and compositions, 94–98
 - phyllotaxis, 113–121
 - Stirling set numbers, 92–94
- Number sequences, 63
- Numbers modulo p , 130
- Number system
 - bases of, 21
 - Egyptian, 18, 19–20
 - Greek, 18
 - Hindu-Arabic, 18, 20–21
 - Roman, 19
 - Seleucid, 18
- Number walls, 85–87
 - windows in, 87–89
- Numerals, 17–22
- Numerator, 151
- Octahedral numbers, 50–52, 53
 - truncated, 52
- Octal system, 21
- Octave, 256–257
- Octonions, 234
- “Oct-” words, 9, 10
- Odd numbers, 27
 - tetrahedral, 46
- “One,” use of word, 3–4
- One hundred and sixty-three,
 - importance of, 25
- One-to-one correspondence, 277
- Online resource, number checker as, 26
- Orders, 66
- Ordinal numbers, 25
 - Cantor’s, 266–271, 275–276
 - multiplying, 271–276
- Out shuffle, 163, 164, 165
- p , *see* Arithmetic modulo p
- Pacioli, Luca (Fra), 184
- Parabolas, 32
- Parentheses, 100
 - and shaking hands, 104
- Partial quotients, 178
- Partition numbers and compositions, 94–98
- “Par-” words, 6
- Pascal, Blaise, 68
- Pascal’s triangle, 63, 67, 68–70, 94
 - Catalan numbers and, 101
 - coefficients and, 72, 73
- Patterns
 - arrangement numbers, 66
 - choice numbers, 67–68
 - choice numbers as binomial coefficients, 72–74
 - choice numbers with repetitions, 70
 - colors and, 29–30
 - factorial numbers, 65–66
 - frieze, 74–76
 - guessing next term in sequence, 79–89
 - Moessner’s magic, 63–65
 - number of regions, 76–79
 - Pascal’s triangle, 63, 67, 68–70
- Pell equation, 204
- Pentagon, folding, 185
- Pentagonal numbers, 39, 96–97
- Pentatope numbers, 55–57, 70
- “Pent-” words, 9, 11
- Perfect numbers, 136–137
- Periodic points, 207–209
- Permutations, 66
- Phyllotaxis, 113–121
- Physics, geometry of, 213

- Pi (π), 25, 194
 - as number, 237–239
- Pitch, 257
- Place notation, 17–18
- Planck length, 213
- Plants
 - bud arrangement and, 122–124
 - phyllotaxis and, 113–121
- Platonic solids, 53
- Plimpton 322, 17, 174, 176
- Plouffe, Simon, 25
- Poker hands, 70–71
- Pollard, John, 139
- Polygon(s)
 - Catalan numbers and, 101–102
 - constructing regular, 197–202
 - seventeen-sided, 25
 - and trees, 103
 - as triangles, 97–98
- Polygonal numbers, 38–42
 - building, 42
- Polynomials, of degree two, 32
- Powers
 - of e , 251–254
 - of ten, 16
- Primality, Wilson’s test for, 220
- Prime denominator, 161
- Prime numbers, 127–149
 - arithmetic modulo p and, 130–132
 - defined, 127
 - discriminants and, 224–226
 - Fermat, 137–141
 - Fermat’s test for, 141–143
 - fractions, 147–148
 - frequency of, 143–145
 - guesses and, 145–146
 - Mersenne’s, 135–136
 - news, 133–135
 - prime factors and, 132–133
 - sum of two squares, 146–147
- Primes
 - Gaussian, 218, 219
 - integers and, 223
 - long, 169–171
- Primitive n th roots of unity, 227
- Projections, 42
- Pronic number, 34
- Pyramid numbers, square, 47–49
- Pyramids, hex, 43
- Pythagoras, 23, 213
 - fractions and, 152
 - geometric problems and, 182
 - number ($\sqrt{2}$) of, 25
 - theorem of, 182–183, 192
- Pythagorean fractions, 171–173, 256, 257
 - Babylonian table of, 173, 174
- Pythagorean triples, 173
- “Quad-,” “quar-,” “quat-” words, 8, 11
- Quadratic equations, 192, 211
- Quadratic expressions, 32
- Quadratic residues, 31
- Quadratic surds, 190
- Quaternions, 231–232
 - machine for, 232–234
- “Quin-” words, 9, 11
- Quotient-difference table, 86–87
- Quotients, partial, 178
- Rademacher, H., 95
- Ramanujan, Srinivasa, 95
- Ramanujan numbers, 96
- Ratio, golden number and, 184
- Rational numbers, 23, 151, 183
- Rational triangle, 228
- Ratios, 183
 - harmony, fractions, and, 256–257
- Regions, patterns and, 76–79
- Regular polygon, constructing, 197–202
- Regular solids, 53
- Remainder, 28
- Residue(s)
 - colors, patterns, and, 29–30
 - quadratic, 31
- Residue classes, 28
- Rhind papyrus, 23, 237
- Rhombic dodecahedral numbers, 53–54
- Riemann, Georg Friedrich Bernhard, 144–145, 146
- Riemann hypothesis, 145
- Rodriguez, 234

- Roman number system, 19
fractions in, 22, 23
- Rooted plane bushes, 99
- Rulers, Euclid and, 191-192
- Scalar part, 231
- "Score," use of word, 11
- Secand numbers, 110-111
- Seleucid number system, 18
- Semiregular solids, 53
- "Sept." words, 9-10, 11
- Sequences, *see also* Patterns; Shuffles
guessing next term of, 79-89
look and say, 208-209
- Sets
countable, 278-279
counting in different ways, 275-276
empty, 266
finite, 278
- Seventeen-sided polygon, 25
- "Seven" through "ten," use of words,
9-10
- "Sex-," "ses-" words, 9, 11
- Sexagesimal system, 21, 183
- Shaking hands, *see* Handshakes
- Shifts, 215-216
- Shuffles, 163-168
cycle length and base, 166-168
Monge's, 165
periodic points and, 207-209
riffle, 163-165
Sharkovsky's, 208
- Sierpiński, Waclaw, 265-266
- Sieve, of Eratosthenes, 128-129, 130
- Singly even number, 30
- "Six," use of word, 9
- Sixty, words for, 121
- Skewes's number, 61, 62
- Sources of information, *see*
Information sources
- Square(s), 39; *see also* Triangular
numbers
quaternions and, 232
sums of two, 146-147
very large numbers and, 59
- Square numbers, 30-33
- Square pyramid numbers, 47-49
- Square root, 182-186
of negative numbers, 212-213
- Squaring the circle, 191
- Stark, Harold, 224-225
- Stella octangula number, 51
- Stirling cycle numbers, 93
- Stirling set numbers, 92-94
- Stirling's formula, 260-261
- Størmer, Carl, 244-248
- Størmer's numbers, 245-248

- Sumerian numerals, 17
- Sums
of cubes, 57-58
of two squares, 146-147
- Superscripts, very large numbers and,
59-60
- Surreal numbers, 25, 283-284
- Surreal values, of Hackenbush chains,
289
- Sweet Seventeen* hand, in poker, 71
- Table of Constants, 25
- Taine, John, *see* Bell, Eric Temple
- Tangent numbers, 111
- Ten, powers of, 16
- Terms, lowest, 151
- Tesseract, 55
- Tetrahedral numbers, 44-46, 70
truncated, 46, 47
- Third dimension, 42-44
- Thirteen, word for, 11
- "Three," use of word, 7-8
- Time, measurement system for, 17
- Totient numbers, 154-156, 167
- Trains, gear, 178, 179
- Transcendental numbers, 23-25,
237-263
Apéry's number, 261-262
Euler's relation, 254-256
Gregory's numbers, 241-243,
244-245
logarithms, 256
Liouville's number, 239-241
logarithms, 248-251
pi (π), 237-239
powers of e , 251-254

- Transcendental numbers (*continued*)
Stirling's formula, 260–261
Størmer's numbers, 245–248
- Trees
bifurcating and binary, 98
and exponentiations, 103
polygons and, 103
- Triangle(s)
Calabi's, 206
Pascal's, 63, 67, 68–70
polygons as, 97–98
rational, 228–229
sequences and, 83–84
zigzag, 110
- Triangular numbers, 33–38, 39, 70
- Trisectors, 198–202
- “Tri-” words, 7–8
- Truncated octahedral numbers, 52, 53
- Truncated tetrahedral numbers, 46, 47
- Tsu Ch'ung-chih, 238
- Twenty, word for, 11
- Twirls, 215, 216
- “Two”
as number, 25
use of word, 4–6
- Uncountable sets, 278
- Unit, 127
- “Un-” words (for “one”), 4
- Upside-down copy, 75
- Upstairs-Downstairs rule, 37, 49, 58
- Vallée-Poussin, Charles-Jacques de la,
143–144
- Value, in Hackenbush game, 286, 287
- Van Ceulen, Ludolph, 238–239
- Vector, 231
- Very large numbers, 59–62
- Vieta, 238
- Vogeler, Roger, 173
Pythagorean fraction finder of, 172
- Von Staudt, 109
- Watkins, William, 140
- Wechsler, Allan, 15
- Welsh language, number words in, 3
- Whole numbers, 22
- Wilson, John, 142–143, 168–169
- Wilson's test, for primality, 220
- Wilson's theorem, 168–169
- Words, as number systems, 2–16
- Written numbers, 17–22
- Year, 175
- Yorke, James, 208
- Zag numbers, 111
- Zermelo Ernst, 274–275
- Zero, 18, 23
counting from, 265–266
- Zigzag arrangements, 110–111
- Zigzag triangle, 110
- Zillion, use of term, 13–16
