

CONTRIBUTORS

- J. M. Aguirregabiria
Laboratoire de Physique Theorique, Institut H. Poincare, Paris, France
(pp. 259-268).
- V. Ambegaokar
Institute for Theoretical Physics, University of California, Santa
Barbara, California; and Laboratory of Atomic and Solid State Physics,
Cornell University, Ithaca, New York (pp. 231-239).
- A. Aspect
Institut d'Optique Theorique et Appliquee, Centre Universitaire
d'Orsay, Orsay Cedex, France (pp. 163-183, 185-189).
- L. Banyai
Institut fur Theoretische Physik der Universitat Heidelberg, West
Germany (pp. 241-257).
- A. O. Barut
Max-Planck Institut fur Quantenoptik, Garching, West Germany; and
Department of Physics, University of Colorado, Boulder, Colorado
(pp. 119-128, 139-143).
- L. Bel
Laboratoire de Physique Theorique, Institut H. Poincare, Paris, France
(pp. 259-268).
- G. P. Beretta
Massachusetts Institute of Technology, Cambridge, Massachusetts; and
Politecnico di Milano, Milano, Italy (pp. 193-204, 205-212).
- J. Bergou
Max-Planck Institut fur Quantenoptik, Garching, West Germany
(pp. 375-383).
- E. R. Caianiello
Dipartimento di Fisica Teorica e sue Metodologie per le Scienze
Applicate, Universita' di Salerno, Italy (pp. 453-464).
- L. Cohen
Hunter College of the City University, New York, New York (pp. 97-117).
- P. Dobiash
Max-Planck Institut fur Quantenoptik, Garching, West Germany
(pp. 385-408).

- A. Dorsel
Sektion Physik, Universitat Munchen, Garching, West Germany
(pp. 361-374).
- A. Elci
Institute for Modern Optics, Department of Physics and Astronomy,
University of New Mexico, Albuquerque, New Mexico (pp. 431-451).
- W. J. Firth
Department of Physics, Heriot-Watt University, Edinburgh, United
Kingdom (pp. 361-374).
- A. Guzman de Garcia
Max-Planck-Institut fur Quantenoptik, Garching, West Germany
(pp. 361-374).
- W. Guttinger
Institute for Information Sciences, University of Tuingen, West
Germany (pp. 57-82).
- F. A. Hopf
Optical Sciences Center, University of Arizona, Tucson, Arizona
(pp. 411-429).
- F. W. Hopf
Department of Biology, Cornell University, Ithaca, New York (pp.
(pp. 411-429).
- E. T. Jaynes
St. John's College and Cavendish Laboratory, Cambridge, United Kingdom;
and Department of Physics, Washington University, St. Louis, Missouri
(pp. 33-55).
- M. Kleber
Institute for Theoretical Sciences, University of New Mexico,
Albuquerque, New Mexico; and Physik Department, T. U. Munchen, West
Germany (pp. 213-220).
- W. E. Lamb, Jr.
Department of Physics and Optical Sciences Center, University of
Arizona, Tucson, Arizona, 85721 (pp. 3-23).
- G. Leuchs
Joint Institute for Laboratory Astrophysics, University of Colorado and
National Bureau of Standards, Boulder, Colorado (pp. 329-360).
- R. L. Liboff
Schools of Applied Physics and Electrical Engineering, Cornell
University, Ithaca, New York (pp. 221-229).
- F. Marquis
Max-Planck Institut fur Quantenoptik, Garching, West Germany
(pp. 361-374).
- J. D. McCullen
Department of Physics, University of Arizona, Tucson, Arizona,
(pp. 361-374).
- P. Meystre
Max-Planck Institut fur Quantenoptik, Garching, West Germany
(pp. 139-143, 361-374).

- M. M. Nieto
Theoretical Division, Los Alamos National Laboratory, Los Alamos, New Mexico (pp. 287-307).
- D. P. J. O'Brien
Max-Planck-Institut fur Quantenoptik, Garching, West Germany (pp. 361-374).
- R. F. O'Connell
Department of Physics and Astronomy, Louisiana State University, Baton Rouge, Louisiana (pp. 83-95).
- A. Rieckers
Institute for Theoretical Sciences, Department of Physics and Astronomy, University of New Mexico, Albuquerque, New Mexico; and Institute for Theoretical Physics, University of Tübingen, West Germany (pp. 483-492).
- G. Reiner
Max-Planck-Institut fur Quantenoptik, Garching, West Germany (pp. 361-374).
- V. E. Sanders
Rockwell Int. A.M.S.D. Anaheim, California (pp. 385-408).
- M. Sargent III
Max-Planck Institut fur Quantenoptik, Garching, West Germany; and Optical Sciences Center, University of Arizona, Tucson, Arizona (pp. 361-374).
- W. Schleich
Max-Planck Institut fur Quantenoptik, Garching, West Germany; and Center for theoretical Physics, University of Texas at Austin, Austin, Texas (pp. 385-408).
- J. F. Scott
Condensed Matter Laboratory, Department of Physics, University of Colorado, Boulder, Colorado (pp. 465-472, 473-481).
- M. O. Scully
Max-Planck Institut fur Quantenoptik, Garching, West Germany; Center for Advanced Studies and Institute for Modern Optics, University of New Mexico, Albuquerque, New Mexico (pp. 131-138, 375-383, 385-408).
- K. Ujihara
Max-Planck-Institut fur Quantenoptik, Garching, West Germany; and University of Electro-Communications, Chofu, Tokyo, Japan (pp. 361-374).
- E. Vignes
Department of Physics, UCSD, La Jolla, California (pp. 361-374).
- D. F. Walls
Institute for Theoretical Physics, University of California, Santa Barbara, California (pp. 309-328).
- H. Walther
Sektion Physik, Universitat Munchen and Max-Planck-Institut fur Quantenoptik, Garching, West Germany (pp. 271-285, 361-374).
- J. A. Wheeler
Center for Theoretical Physics, Univ. of Texas at Austin (pp. 25-32).

E. M. Wright

Max-Planck-Institut für Quantenoptik, Garching, West Germany
(pp. 361-374).

W. H. Zurek

Theoretical Astrophysics, Los Alamos National Laboratory, Los Alamos,
New Mexico; and Institute for Theoretical Physics, University of
California, Santa Barbara, California, (pp. 145-149, 151-161).

INDEX

- Absorption
 - coefficient, 448
 - multiphoton, 343, 354
 - two-photon, 332, 333, 345
 - Doppler-free, 276
- Aharonov and Bohm effect, 27, 28, 170
- Allotropic forms, 47
- Attenuation, linear, 341
- Autocovariance, 48
- Averaging, method of, 396, 401
- Bayes' theorem, 40
- BBKGY hierarchy, 221, 223
- Bell inequalities, 34, 38, 119, 131, 139, 163, 168, 185, 309, 315
- Benard problem, 81, 468
- Bifurcation
 - diagram, 373
 - geometry, 57
 - Hopf, 60, 78, 490
 - phenomena in neurons, 80
 - pitchfork, 59
 - theory 57
- Birefringence, 473, 477
- Black-body radiation, 273
- Blackman-Tukey method, 48
- Bogolubov transformation, 302
- Boltzmann equation, 241
- Boltzmann model, charged, 253
- Broadening, inhomogeneous, 413, 427
- Brownian motion, 23, 146, 231, 234
- Catastrophe theory, 53, 59, 60
 - cusp catastrophe, 61, 63,
- Cauchy-Schwartz inequality, 309, 314
- Cerenkov radiation, stimulated, 468
- Chapmann-Enskog conjecture, 257
- Chaos, 259, 361, 367, 373
- Characteristic function, 101, 110, 114
- Chirality, 477, 479
- Clausius-Mosotti formula, 252
- Clonal populations, 421
- Coarse graining, 9
- Coherent states, 88, 287, 309, 312
 - minimum-uncertainty, 299
 - two-photon, 289, 302
- Collisions, inelastic, of heavy ions, 432
- Communication
 - theory, 289
 - optical, 356
- Continued fractions, 396
- Cooper pair, 483, 487
- Coordinates, intrinsic, 215
- Copenhagen interpretation, 34
- Correlation functions, 310, 331
 - Debye-Huckel, 223
 - intensity, 332
 - spatial, 221
 - two time, 318
- Correspondence rules, 108, 109
- Cosmology, 466
- Cramer-Rao inequalities, 460
- Cross-entropy, 454
- Decorrelation timescale, 145
- Darwinian evolution, 411
- Debye length, 222, 244
- Density matrix, 7, 22, 133, 146, 156, 158, 194, 209, 231, 234, 325, 338, 353, 431
 - diagonal elements, 16, 22
 - non-diagonal elements, 14, 21
- Detailed balance, 247, 250, 253
- Diamagnetic interaction, 272
- Diffusion, 242, 249
 - phase, 20, 22, 333, 393
- Dissipative structures, 59
- Distribution functions, 83
 - Cahill-Glauber, 86
 - coherent state representation, 310
 - generalized P function, 314
 - Glauber-Sudarshan, 89, 309
 - Husimi function, 83, 87
 - Joint quantum, 97
 - Kirkwood, 83, 92
 - positive, 98, 113
 - quantum, 83
 - truncated Poisson, 16

Distribution function (continued)
 Wigner distribution, 99, 100,
 83, 84, 99, 100, 104, 133,
 141, 181, 219, 310, 314,
 433
 Dithering, 387
 Dominant reduction, 260
 Dressed atom picture, 277
 Echogram, 67
 Ehrenfest's principle, 213, 219
 Einstein A coefficient, 273
 Einstein relation, 243, 254
 Electron,
 theory of, 123
 Dirac electron, 123, 126
 Entropy, 453
 principle of maximum, 45, 46
 EPR problem, 119, 122, 132, 139,
 163, 185
 Equilibrium
 approach to, 11, 14, 193
 thermodynamic, 3
 Ergodic principle, 331
 Ergodic theorems, 45
 Evolution equation, nonlinear,
 193, 201
 Excitation, two-photon, 175
 Feigenbaum number, 373
 Field ionization, 281
 Fluctuations, 392
 Fokker-Planck equations, 316, 320,
 321, 365, 395, 403, 432,
 434
 Four mode fields, 315
 Four-wave mixing, degenerate, 253,
 361, 367
 Frank-Hertz experiment, 356
 Free-electron laser, 355
 Friction, 234, 238
 Gauge transformations, 484
 Generating function, 262
 Goldstone boson, 474
 Gram determinant, 199
 Gravitational waves, 304, 309, 356
 Ground noise, 365
 Gyroscope steps, 397
 Hanbury-Brown-Twiss effect, 311,
 329, 335
 Harmonic generation, 343, 345,
 353, 355
 Harmonic potential
 classical, 298
 quantum, 298
 Hidden variables, 35, 119, 131,
 139, 165, 316
 Holstein-Primakoff transformation,
 288
 Hopping model
 charged, 250
 neutral, 247
 Hyperfine structure, 173
 Hysteresis, 379, 473, 475
 Ikeda instabilities, 373
 Image reconstruction, 49
 Interferometry, very long baseline,
 385
 Inverse problem, generalized, 43,
 48, 50
 Information, 151, 158, 195, 453
 metric, 455, 458
 Kullback-Leibler, 455
 Irreversibility, 205, 241, 246
 Irreversible act of amplification,
 25, 29
 Ising model, 5, 473
 extended, 477, 478
 Jaynes-Cummings model, 353,
 Jeffreys divergence, 455
 Johnson noise, 22
 Josephson junctions, 468, 483, 490
 Lamb shift, 128
 Landau potential, 468
 Langevin equation, 236, 241, 316,
 364, 387, 393, 395, 402
 quantum, 318
 Laplace-Jeffreys method, 42
 Laser
 dye lasers, 465, 466, 470
 He-Ne, 466, 468
 quantum theory, 10, 16, 316
 two-photon laser, 314
 with injected signals, 470
 Lense-Thirring effects, 386
 Likelihood function, 42
 Locality, 120
 Lock-in effect, 387, 390
 Louville equations, 435
 Lyapunov functional 468
 Lyapunov-Schmidt reduction, 75
 Markoff approximation, 393, 448
 Maser, 271
 Ammonia beam, 6
 Rydberg, 279
 Mass renormalization, 127
 Master equations, 241, 316, 325
 Maxwell-Bloch equations, 432
 Maxwell's demon, 151, 155
 quantum, 157
 Maxwell equations, 243
 Mean field theories,
 self-consistent, 431
 Meaning circuit, 25, 26
 Metric gravitation theories, 386
 Missing links, dilemma of 411, 416
 Morse singularity, 60
 Multistability, 381, 382, 449
 Natural selection, 411
 Negative temperature, 16
 Neoclassical theory, 35
 Ni cosmology, 386
 Nonlocal theory, 137,
 OPIC approximation, 215

Optical activity, 473, 477
 Optical bistability, 354, 361, 379, 382, 450, 466
 self-pulsing, 77
 Optical nutation, 271, 284
 Optical phase conjugation, 353, 361
 mirror, 361, 367
 Optical resonators, nonlinear, 361
 Optical susceptibility, 448
 Optics, nonlinear, 309, 375
 Oscillator, simple harmonic, 6
 Parametric amplifier
 degenerate, 313, 354
 non-degenerate, 314
 Parametric oscillator, degenerate, 309, 321
 Partition function, 5, 365
 Path integral methods, 231
 Period doubling, 361, 367, 373
 Perturbation theory, 217
 Phase gratings, 368
 Phase transitions, 465
 incommensurate, 473
 Phonons, 474
 Phonon focusing, 71
 Photon
 antibunching, 304, 309, 311, 329, 336, 339, 340, 346
 processing, 418
 statistics, 309, 329
 sub-Poissonian, 347
 Pippard relations, 471
 Planck length, 30
 Planck's radiation formula, 274
 Plasma parameter, 222
 Plasmas, strongly coupled, 221
 Pointer basis, 146
 Poisson distribution, 21
 Polarizability, 272
 Prior probabilities, 44
 Probability amplitudes, 27, 458
 Probability theory, 38
 Quantization equation, 111,
 Quantum electrodynamics, 271
 Quantum geometry, 453
 Quantum limit, standard, 357
 Quantum noise, 387, 391
 in ring laser gyroscope, 385
 Quantum non-demolition, 305, 356
 Quantum phenomenon, elementary, 25
 Quantum trajectories, 213
 Quasilocal algebra, 485
 Rabi nutation, 283
 Rabi oscillation, 277, 347
 Radiation Pressure, 362
 Raman-Nath approximation, 368
 Rankine-Hugoniot jump condition, 75
 Relativity, general, 386
 Renormalization group, 373
 Representability, 113
 Resolvent operator, 255
 Resonance fluorescence, 311, 329, 346, 352
 Response function, linear, 438
 Retarded systems, 259
 Reversibility, 241
 Riemann tensor, 459
 Rydberg states, 271, 272
 Sagnac effect, 385, 389
 Saturable absorber, 343, 424, 465, 468
 Scale projection, 245
 Scaling, 241, 242, 247, 250, 253
 Schrodinger equation, nonlinear, 439
 Schrodinger's paradox, 36
 Self-focussing, 379, 381
 Semiconducting medium, 243
 Sexual organisms, 423
 Spacetime, 30
 Spectrum analysis, 48
