

INDEX

- Adsorbed hydrocarbons, 251
- Adsorption, 164
 - at a mercury surface, 61
 - of quinoline and pyridine, 61
- Alumina, Al₂O₃, 266, 388
- Angular distribution, 293
 - of photoelectrons, 244
- Atomic and molecular scattering
 - from surfaces, 135-194
- Atomic beam apparatus, 153-156
- Atomic beam detection, 155
- Atomic beam sources, 155
- Attenuated total reflection (ATR)
 - 358-361, 364
- Auger spectroscopy, 153, 161, 241

- Back donation, 251
- Band binding, 2, 6
- Band structure effects, 316,
 - 145-150
- Bimolecular reactive scattering,
 - 135, 156, 161, 164
- Bonding site geometry, 243
- Bound surface states, 136,
 - 141-145
- Bronsted acid sites, 386, 388

- Calcium, Ca, 265
- Carbon monoxide oxidation, 161,
 - 165-169, 173-192
- Catalysis, 135, 156, 161, 164,
 - 261-288
 - activity, 263
 - heterogeneous, 373
 - hydrogen reforming, 265
 - poisoning, 273
 - promoter, 263
- Catalysis (cont'd)
 - reorientation, 265
 - selectivity, 263
 - steam reforming, 271
- Catalytic reaction studies,
 - 169-192
- Charge separation, 310A, 321, 322
- Chemical shift, 230
- Chemisorption, 164, 225, 373, 386
- Chemisorption kinetics, 238
- Cleaved GaAs, 315
- Cleaved Ge, 312
- Cleaved Si, 312, 313
- Close packed layer, 64
- Close-packed non-registered
 - layer, 64, 67
- CO adsorption, 243, 250
- CO/Ru, 240
- CO/W(110), 238
- Coherence length, 151-153
- Core level binding energies, 230
- Core level spectra, 225
- Core level spectroscopy, 230
- Correlation diagram, 242
- Correlation effects, 227
- Cross correlation function, 192
- Crystal growth, 46

- Dangling bond, 312, 313
- Debye model, 141
- Debye-Waller factor, 136
- Deposition of
 - lead onto copper, 64
 - lead onto single crystal silver
 - electrode, 64

- Deposition of (cont'd)
 - metals
 - overpotential, 63
 - underpotential, 63
 - ruthenium on a mercury surface, 69
 - silver on dislocation free single crystal silver, 49
- Desorption, 165
- Difference spectra, 243
- Diffraction, 135, 140-141, 151
- Dipole selection rules, 247
- Dissociative adsorption, 295
- Elastic intensity, 140
- Elastic scattering, 135-159
- Electrochemical oxidation of chemisorbed carbon monoxide on platinum, 70
- Electrochemistry in
 - deposition of metallic layers, 34
 - emission photoholes, 41
- Electrode-electrolyte, 376
 - interface, 393
- Electrode surfaces, 393
- Electron energy analyzers, 226
- Electron energy loss spectroscopy
 - 292, 294
 - cross section, 293
 - Co/Ni, 300, 302
 - CO/w, 304, 305
 - D₂/Ni, 295
 - HD/Ni, 295
 - H₂/Ni, 295
 - O/Ni, 299
 - O/W, 300
- Electron mean free path, 228
- Electrostatic potential (of the solid) in the surface region, 230
- Electron transfer
 - at semiconductor electrodes, 13
 - of excited molecules, 21
- Eley-Rideal mechanism, 165, 169-192
- Emission threshold, 30
- Energy bands in semiconductor, 2, 7
- Energy loads
 - in electrolytes, 10
 - in semiconductor, 2
- Epitaxial layers, 64, 319
 - doping of, 319
- ESCA, 161
- Exchange, hydrogen-deuterium, 164
- Excited molecules
 - reaction of, 21
- Extrinsic processes, 229
- Fermi level
 - of electrolyte, 10
 - of semiconductor, 2
- Final state effects, 230
- Fluctuation in the conductance of a lipid bilayer, 61
- Fluorescence, 380
- Formaldehyde on W(100), 236
- Formation of
 - amalgam, 47
 - indium oxide on indium, 47
 - mercuric oxide on mercury, 47
 - monolayers of calomel on mercury, 47
 - single layer plane, 47
- Free electron hole pairs, 310A
- Gas-surface interaction, 136, 161
- Graphite, 266
- Growth forms
 - right circular cones, 50
- H₂S adsorption, 319
- Helium scattering, 168
- Hexadinediol-bis-(p-toluene sulphonate)
 - crystal structure, 123
 - polymerization, 122, 123
- Holes
 - excitation of in metals, 31
 - photoemission of, 31, 41
- Hydrocarbons, 265, 271-278
- Hydrogen, 271
- Hydrogen bonding, 386
- Hydrogen bonded species, 396
- Hydrogen evolution, 69
- Image charge screening, 232
- Inelastic processes, 140, 150-151

- Infrared absorption, 166, 374
Interaction, chemical, 136
Interaction, physical, 136
Interaction potential gas-surface, 135-140
Intrinsic processes, 229
Ion surface scattering
 angular distribution
 calculated and measured, 217
 Li⁺ from nickel, 197
 Li⁺ from tungsten, 197
 Li⁺ from W(110), 203
 calculated energy spectrum, 211
 calculated spatial distribution, 212
 calculated trajectories, 210
 computer simulation, 207
 differential cross sections, two particles-high energy, 203
 double collision
 influence on energy loss, 204
 influence on scattering behavior, 204
 energy spectra, 198
 influence of interaction potential, 209
Ion surface scattering (cont.)
 Monte Carlo calculations, 213
 rainbow scattering, 205
 scattering models, 200
 binary collision model, 201
 modified binary collision model, 202
Ionization potential, 227
Isomerization, 390

K is a frequency factor, 46
Kinetics of lattice formation, 59
Koopman's theorem, 227, 232
Knudsen cell, 155
Kossel kink sites, 53

Langmuir-Blodgett techniques, 121, 360, 366
Langmuir-Hinshelwood mechanism, 165, 169-192
Laser Raman spectroscopy, 376
Lead electrode, scavenger effects 38
Lewis acid sites, 390

Linear sweep voltammetry, 55, 56
Lithium ions, 195
Long chain diacetylenes, 122
Low energy electron diffraction (LEED), 153, 161, 165, 264

Many-body effects, 233
Mass spectrometry, 156
Mean free path, 227
Metal carbonyls, 240
Metallic reflection, 338
Micelles of
 cetyl trimethyl ammonium bromide(CTAB) 104, 106-108
 copper lauryl sulfate (CuLS), 106
 cosurfactant, 105
 detergents, 104, 106
 potassium oleate, 105
 sodium lauryl sulfate (NaLS), 104, 106, 111, 118, 119
 surfactant, 105, 113, 117
Molecular beam surface scattering 135-194
Molecular crystals, 332-360
Molecular orientation, 243
Monolayers of
 arachidic acid, 77-79, 83, 80, 84, 87
 azo dyes, 82, 83, 96
 bipyridium ion, 90
 cyanine dyes, 78-87, 89-100
 donor-acceptor dyes, 84-86, 88-93
 interlocking molecules, 82
 J aggregates, 93-96
 myristic acid and cholesterol, 99
 ocladecylamine, 77
 palmitic acid, 99
 stearic acid, 77
 viologen, 90-92
Molecular vibrations, 374
Monomolecular layers, 360-369
 cadmium arachidate, 336-368
 deposition techniques, 366
Monomolecular multilayers
 polymerization, 126
 preparation, 126
 crystallinity and order, 132

- Morse potential, 137
- Nickel, Ni, 195, 264
- Non-metallic catalyst systems, 281-285
 CoMo catalysts, 281
 NiW catalysts, 283
 Phillips catalysts, 283
- Nucleation, 46
 instantaneous, 46
 progressive, 46
- Nucleative mechanism, 67
- Olefins, 264
- Optical spectroscopy, 329-372
- Orbital assignment, 245
- Orbital relaxation, 227
- Organic semiconductors, 310, 324
 thin films of, 310A, 322, 325
- Oxidation, 161, 225
- Oxidation kinetics, 238
- Oxide catalysts, 285-288
 electron pair acceptor (EPA), 286-287
 electron pair donator (EPD), 286-287
 magnesium compounds, 287
- Oxide film formed on platinum anodes, 61
- Oxide surfaces, 390, 391, 392
- Oxygen, 271
- Oxygen adsorbed on aluminum, 232
- Oxygen adsorption, 319
- Palladium, 161
- Paraffins, 265
- Phase transformations, 61
- Photoelectron spectroscopy, 225
 binding energy, 227
 reference level, 227
 relaxation energy, 227
- Photoionization, 226
- Photolysis, laser
 apparatus, 106
 chlorophyll-a in NaLS, 111-112
 effect or pyrocyanine, 112
 electron transfer reactions, 109, 110, 113, 117
 N,N,N',N'-tetramethyl benzidine (TMB) in NaLS, 113-115
- Photolysis, laser (cont'd)
 pnenothiazine in solution, 115-117
 photoionization in micelles, 112, 115
 polymerization of vinyl carbazol (VC) in micelles, 117-120
 storing light energy, 126
- Photoyields from
 Au(111), 33, 40
 Cu(111), 32
 Cu faces at normal incidence, 34
- Phthalocyanine films, 324
 inelastic electron tunneling, 324
 optical absorption of, 324
- Plasma resonance
 in electrodeposited Ag layers, 35
 in Cu and Ag on Au(111), 36
- Plasmon satellite lines, 229
- Platinum, Pt, 161, 265
- Polariton, 333, 334, 357
- Polymerization
 of acetylene over alumina and zeolites, 392
 topochemical, 121-123
- Polymerization of diacetylenes, 121-134
- Potential barriers, 300
- Precursor state, 169
- Preparation of monolayers, 73-93
 coating techniques, 84-86
 hexadecane, influence, 77, 78, 80
 manipulating technique, 86-89
 self assembly, 76-84
 solvents, 78, 80
 substrates, 76-78, 86, 87
- Properties of micelles
 catalytic properties, 105, 107
 electrical charged interfaces, 105, 109
 hydrophobic regions, 105, 109, 113
 potential drop from interior of micelle to exterior, 105, 106
 stern layers, 113

- Properties of monolayers
 electrical capacitance and configuration, 78
 electron tunneling and transfer, 78, 92, 96, 99, 100
 energy transfer, 84, 96, 100
 fluorescence, 85, 86, 88, 100
 hydrophobic/hydrophilic interaction, 76, 77, 84, 87-89
 organization, 75, 76, 80, 82, 94
 photoconduction, 96-100
 photographic process, 88
 photosynthetic membrane, 75
 surface pressure-area isotherms, 77-84
- Pyridine, 386
- Radiation sources, 226
- Radiolysis, pulsed
 apparatus, 106
 disproportion kinetics of bromide anion in CTAB, 107-109
- Raman spectroscopy, 373-403
- Reactive scattering, 161-194
 residence time, 163-164
 resistance measurements, electrical, 166
- Recombination and trapping, 310A, 322, 325
- Reflection spectra
 anthracene, 341-346, 352
 9,10 dichloroanthracene, 336, 338
 phenanthrene, 336, 337
 polydiacetylene, 336, 338
 survey, 335-338
 tetracyanoquinodimethane (TCNQ^o), 338, 340
- Satellite peaks, 231
- Scavengers
 and collection efficiency, 31
 and reaction with solvated electrons, 30
 protons as, 38
- Secondary negative ions, 180
- Semiconductor electrodes
 electron transfer reactions at, 1, 13
 energy bands in, 2
- Semiconductor electrodes (cont'd)
 Fermi level of, 2
 photoeffects on, 17
 space charge in, 2
- Semiconductor surfaces, 310
- Shake-up peaks, 231
- SIMS, 161
- Site shift surface exciton, 338-355, 359-360
- Sodium, Na, 266
- Solar energy, 19
- Solid state chemistry, 121
- Space charge, 2
- Steam reforming catalysis, 271-281
 gasification, 271
 hydrogenolysis, 271
 methanation, 272
 reaction sequences, 272
 surface physics techniques, 274-280
 white gas shift, 271
- Sticking probability, 166
- Stopping band, 334-335
- Structure of p(2x2)H/Ni, 296
- Substituted diacetylenes
 force-area curves, 124, 125
 formulas, 122
 monomolecular films, 124
- Substituted diacetylenes (cont.)
 polymerization mechanism, 130
 polymerization of multilayers, 126-128
 UV-spectra of polymer, 128
 Visible spectra of polymer, 128
- Sulfur, S, 264
- Supersonic nozzle, 155
- Surface cleaning, 175
- Surface analysis equipment, 153
- Surface free energy, 46
- Surface electromagnetic waves, 355-356
- Surface exciton, 338-355, 359-360
- Surface phonons, 135
- Surface photoconductive spectroscopy, 310-312
- Surface photovoltage spectroscopy, 309
- Surface plasmon
 effects on Ag(100) and Ag(111), 36, 37

- Surface plasmon (cont'd)
 - excitation, 30, 36
- Surface polaritons
 - exciton surface polariton, 355-360
 - phonon surface polariton, 356
 - plasma surface polariton, 360-369
- Surface preparation, 156
- Surface recombination, 164
- Surface sensitivity, 227
- Surface states, 310
- Surface topology, 135
- Symmetry analysis of adsorbate
 - photoemission, 248
- Synchrotron radiation, 242
- Thermal expansion, surface, 136
- Three dimensional growth, 50
- Translational-rotational energy transfer, 136
- Tungsten, 195
- Valence level spectroscopy, 225, 242
 - of adsorbate layers, 242
- Velocity distribution, 163
- W(100)C(2x2)H, 298
- Weak chemisorption systems, 234
- White noise, 59
- X-ray photoelectron spectroscopy (XPS), 264
