

Acknowledgments

I am grateful to Tim Gwinn, Roberto Poli, and Margaret Schaeken for their critical reading of the manuscript. My thanks are also due to them and to George Klir, Donald Mikulecky, and Mihai Nadin, for their continuing encouragement and motivation.

I thank George Klir for receiving this work with enthusiasm and for including it with alacrity in his *International Federation for Systems Research: International Series on Systems Science and Engineering*. My thanks are also due to Meredith Rich and Vaishali Damle, editors at Springer US, for their efforts in the publication process.

I would like to express my appreciation of my wife Margaret, without whose patience and understanding in difficult circumstances, this book would not have been written.

It is a pleasure for me to acknowledge the stalwart support of my friend I. W. Richardson.

I should have liked to have shown this book to Robert Rosen.

A. H. Louie
14 August, 2012

- Power set, 1, 3–5, 16–17, 21, 30, 35, 42, 50, 52, 62, 155, 157
- Power submonoid, 58–59, 64, 102–103
- Preorder, 8–10, 69. *See also* Proset
- Prion, 197, 200, 219–221
- Probability, 141, 143, 145–146, 150, 207–210, 231
 function, 143, 145
 space, 143–147
- Product, 15–17, 25, 32, 45, 49, 87, 118–119, 121, 132
 over **OC**, 117, 119, 172
 relative, 51, 53, 58
 square (*see* Square product)
- Property, 3, 63, 145–148
 monotone, 145–147
- Proset (= preordered set), 8–9
- R**
- Random graph, 143, 145–148
- Random variable, 143–144, 146–147
 indicator, 143–144, 146
- Range (= $\text{ran}(\cdot)$), 6, 8, 16–20, 31–37, 44, 54, 56, 67, 73–74, 88–90, 92, 100–101, 120–121, 133–135, 154, 160, 171–175, 187–192, 204, 214, 216, 223, 230–232
 host, 213, 216
- Rashevsky, Nicolas, 114, 126, 151, 208, 234
- Reachability, 68–69, 71, 103–106, 157–159
- Reductionism, 150, 205, 208–209, 217, 224
- Relation, 2, 5, 8–10, 16–17, 24–25, 29–34, 36, 44, 51–54, 56, 60, 63, 68–69, 71, 82, 88, 90, 92, 129
 antisymmetric, 8, 55, 61–62, 67, 98
 binary, 8, 52, 54
 containment (*See* Relation, inclusion)
 empty, 16, 32, 55–56, 58, 99 (*see also* Set-valued mapping, empty)
 equality, 55, 97
 equivalence, 2, 8, 10, 34, 56–57, 61, 65, 71
 inclusion (= containment), 1, 2, 22, 34, 38–39, 42, 44, 52, 77, 156, 204
 inverse, 26, 36, 44, 58
 reflexive, 8, 10, 54–57, 61, 63, 66–67, 69, 75–76, 98
 symmetric, 2, 8, 54–56, 61, 63–64, 66–67, 73, 98
 transitive, 8, 10, 55–56, 61, 63, 66–67, 69, 98
 universal, 16, 32, 56–58, 61, 63, 99
 on X , 54–59, 73 *et seq.*, 97–99
