

About the Author

David J. Shernoff Ph.D. is an associate professor of educational psychology at Northern Illinois University and visiting associate professor at Rutgers University. He received his doctorate in education from the University of Chicago in 2001. His dissertation work applied Mihaly Csikszentmihalyi's theory of flow and experience sampling methodology to the examination of student engagement in high school. From 2001 to 2003, he served a postdoctoral fellowship at the University of Wisconsin-Madison, where he co-managed a grant-funded research project on middle school students' engagement in school-based after-school programs. While at Northern Illinois University, he has taught courses on adolescent development, educational psychology, and motivation in the classroom to graduate and undergraduate students. His research interests include student motivation and engaging learning environments, engagement in educational video games, and mentoring. His grant-funded empirical work and journal articles related to the topic of engagement have focused on (a) contextual, student, and school, influences on student engagement in high school and the effects of student engagement on short-term and long-term outcomes; (b) the influence of school-based after-school programs on middle-school students' engagement, engaging and disengaging after-school program activities, and engagement in after-school programs as a predictor and mediator of social and academic outcomes; (c) the impact of a video-game approach to mechanical engineering education on student engagement and learning; and (d) the impact of teacher behaviors and motivational dimensions of the learning environment on student engagement in high-school classrooms. His other book titles include *Good Mentoring* (Jossey-Bass 2009, with Jeanne Nakamura), *The Individual-Maker* (William and Sons 2001), and the forthcoming volume *Engaging Youth in Schools: Evidence-based Models to Guide Future Innovations* (Teachers College Record, coedited with Janine Bempechat). He has served as a reviewer for the National Science Foundation and serves on the editorial boards of *The Journal of Youth and Adolescence* and *Afterschool Matters*. He has been featured in *Newsweek*, *Education Week*, UC Berkeley's *The Greater Good*, and other print and online magazines.

He has provided a variety of keynote addresses and workshops nationally and internationally. He received the 2010 award for Exceptional Contributions to Scholarly and Creative Activity from Northern Illinois University's College of Education, and the 2013 "Best Paper" award (with Brianno Coller) by the Applied Research in Virtual Environments for Learning Special Interest Group (ARVEL SIG) of the American Educational Research Association (AERA).
