

## Subject index

- Accelerators 148, 160 ff.  
A.C. polarography 80 ff., 107  
Activation analysis, see Neutron-activation analysis  
Amplitude-to-time conversion 158  
Analytical methods, types 3 ff.  
Applied potential 25, 35  
Argon ionization 28, 46  
*Artemia salina* 11  
Attenuated total reflectance 135  
AutoAnalyzer 139 ff.  
Automatic chloride analyzer 58 ff.  
Automatic wet chemical analysis 139—147
- Beta counting 153  
Bioassay, see Biological test methods  
Biological test methods 3, 8, 10  
Brine shrimp 11  
Bromine residues by neutron activation 169  
Butterfat 52
- Carbamate methods 6, 123  
Carrier gas flow rates, see Flow rates  
—, nature of 36, 41  
Cathode-ray polarograph 80 ff.  
Cavity cells 134  
Chemical group analyses 3 ff.  
Chlorinated pesticide methods 8, 21 ff., 32 ff., 45 ff., 57 ff., 129 ff., 170  
Cholinesterase 9, 139 ff.  
Cholinesterase techniques 9, 139 ff.  
Chromatographic methods, general 3 ff.  
—, see also Gas chromatography, Paper chromatography, Thin-layer chromatography  
Cleaning glassware 24  
Colorimetry 131  
Column bleed 40, 62  
Combustion titration methods 45, 57 ff.  
Compton continuum 157  
Compton effect 155, 157  
Compton interaction 155  
Compton scattering 156, 157  
Concentration quenching 120
- Daphnia magna* 10  
D.C. and pulse systems 41  
D.C. polarography 80 ff., 107  
Depolarization 82  
Derivative polarography 81  
Derivative wave 81  
Detector temperature 25, 34  
Deuteron accelerators 148, 160  
Dialysis 140  
Diffusion current 80 ff., 107  
Digestion 141  
Direct wave 81  
Dropping mercury electrode 80, 108  
Drop time 81  
Drugs 92
- Electromagnetic spectrum 130  
Electron absorption coefficients 27—28  
— detector 20—30, 32—43  
— detector, see also Electron affinity detector  
— process 21  
Electron affinity cell 20  
— detector 20—30, 32—43
- Fast neutrons 160  
Feed additive chemical methods 99  
— colorimetric methods 93  
— instrumental methods 100, 107  
Feed additives 92  
Fenac 73  
Flame ionization detector 73—79  
—, sensitivity 75  
Florisil cleanup 52  
Flow rates 25, 34, 36, 76  
Fluorescence assay 119—128  
— intensity 120  
— sensitivity 120  
Fluorescent chelates 121, 126

- Fluorescent derivatives 121—125  
 Food control 1—17  
 Frustrated multiple reflection 136
- Gamma-ray spectra 168  
 — spectrometry 155  
 Gas chromatographic solvents 23  
 Gas chromatography 3, 21—30, 32—43,  
 45—55, 57—71, 100, 119, 136  
 —, columns 25, 33, 34, 46, 65, 74, 100  
 —, instrument parameters 24  
 —, temperature effects 25, 34, 37
- Half-life values 15, 16, 152 ff.  
 Half-wave potential 82, 107  
 Herbicide residues 73  
 HETP 27  
 High-energy neutrons 163  
 Hydrogen-flame electrical detector  
 47—55
- Infrared assay 100, 130—138
- Lower limit of detection 14
- Maximum tolerances 2  
 Mercury by neutron activation 170  
 Microcoulometric titrating system 58  
 Microcoulometry 46, 57—71  
 Microspecular reflectance 53, 136  
 Multisweep method 81
- Neutron activation 45, 148—174  
 — sensitivities 165, 166  
 Neutron generators 148 ff.  
 Neutron sources 160  
 Nuclear reactors 163
- Organochlorine pesticides by neutron  
 activation 170  
 Organophosphate methods 5, 8, 80, 139  
 Oscillographic polarography 80—90,  
 108  
 Oxygen flask method 45
- Paper chromatography 7, 46, 88,  
 107—109, 124  
 Parallel screening 11  
 Phosphorus methods 5, 8  
 Photopeak region 157  
 Physical group analyses 3 ff.  
 Polarographic solvents 83  
 Polarography 80—90
- Polarography of feed medicaments  
 91—118  
 — of pesticide residues 80—90  
 —, precautions 84  
 Polarotrace 81, 88  
 Potassium bromide pellets 102 ff., 133,  
 134  
 Precision, injection of sample 34  
 —, column stability 34  
 —, column temperature control 34  
 Pre-harvest intervals 2  
 Programmed temperature 64, 100  
 Pulse-height analyzers 148  
 Pulsed operation 33, 36  
 Purge gases 25, 27
- Radioactive decay 150  
 Regular wave 81  
 Relative retention times 66  
 Residue life 50 percent 15, 16  
 Resolving power, polarography 81  
 Rest mass 156
- Saturation level of activity 152  
 Scintillation counter 155  
 Sensitivity, electron absorption 26—28,  
 38, 39  
 Single sweep method 80 ff.  
 Small residues approaching control  
 values 12  
 Solid supports 24  
 Solution conductivity detector 47—55  
 Streaming mercury electrode 82  
 Sweep time 81  
 Swimming pool reactors 163
- Thermal conductivity 46, 100  
 Thermal neutrons 161  
 Thin-layer chromatography 7, 88,  
 107—109, 136  
 Tolerances, maximum 2  
 —, various countries 1—2  
 Toxicity values 10—13  
 Triga reactor 162  
 Tritium foil contamination 24
- Ultraviolet assay 101, 130—138  
 Unpermitted residues 2
- van Deemter plot 27  
 Voltage-response 25, 35
- Warburg technique 9—10  
 Zero residue 12
