

INDEX

- A.c. micro flame ionization detector, circuit, 91
- Ageing of the liquid phase film, 53, 55
- Aluminium capillaries, 32
- Amplifiers, 74
 - calculation of sensitivity of, 79
 - noise, 77
 - sensitivity of, 76
- Analytical task and operating conditions, 14
- Argon, 23
- Auxiliary solvents for coating, 46, 54

- β -ray ionization detector, 95
 - connection to the recorder, 100
 - principle of, 97
 - sensitivity of, 97
 - sensitivity to disturbance, 100
 - triode form, 99
- Bibliography
 - on apparatus and methods, 101
 - on applications, 116
 - on theory, 21

- Capillaries, 30
 - cleaning of, 43
 - cleanliness of, 42
 - coating of, 45
 - materials for, 30
 - production of, 34
 - smallest possible length, 20
 - testing, 38
- Carrier gases, 12, 23
 - purification of, 24
 - and viscosity, 16
- Cleaning the capillary, 43
- Coating the capillary, 45
 - auxiliary solvents for, 46, 54
 - evaporation method, 54
 - plug method, 45
 - rate of, 47, 55
 - temperature for, 55
- Coating solution
 - concentration, 54
 - quantity required, 52
- Column performance, 2
 - and capillary diameter, 8, 9
 - factors for production of high, 11 required, 16
- Copper capillaries, 32, 34
- Correction factors for detectors, 84
- Cross section factor, 42

- Detectors, 67
 - calibration of, 83
 - sensitivity stability in FID, 95
 - sensitivity testing, 80
- Diameter
 - determination of, 41
 - gas dynamic, 41
 - mechanical, 42

- Earthing, 88
- Evaporation of the solution film, 53
- Evaporation method for coating, 54

- FID—*see* Flame ionization detector
- Film thickness, 11
 - and coating rate, 49
 - control of, 45
- Flame, ignition of, 90
- Flame ionization detector, 68
 - a.c. arrangement, 91
 - base line stability, 93
 - constructional details, 85
 - electrodes, 87
 - heating of detector chamber, 90
 - jet form, 85
 - optimization of operating conditions, 91
 - principle of, 68
 - theory, 70
- Flow rate meters, 24

- Gas flow in the capillary, 39
- Gas flow rate, 24
 - high precision measurement, 28

Index

- Gas flow rate for coating, 49
 optimum, 14
 reduction to column conditions, 27
Gas purification, 24
Glass capillaries, 31, 35
- Helium, 23
HETP, 3
 definition of, 4
 equation for, 5
 minimum, 8
- Identification of components by comparison with test substances, 105
 methods, 103
 physical, 107
 with preliminary chromatographic separation, 105
 by synthesis, 108
Injection conditions, summary of factors for, 67
Injection of gases, 56
Injection of liquids, 59
Injection of solids, 62
- Linear gas velocity, optimum, 9
Load capacity, 9
- Mass transfer, resistance to, 12
Microelectrolytic cell, use in coating, 50
Micro flame ionization detector, 68, 85
 (*see also* Flame ionization detector)
- Number of theoretical plates, 3
 formulae for, 17
 required, 17
- Plastic capillaries, 33
Plug method for coating, 45
Pressure injection, 61
- Qualitative analysis, 103
 use of literature data, 110
Quantitative analysis, 113
- Rapid analyses, 19
Resistance to mass transfer, 12
Resolution, 17
Retention time
 adjusted, 2, 15
 and carrier gas, 15
Retention time (uncorrected), 16
 shortest possible, 19
Retention values, factors affecting, 112
Retention volume, and partition coefficient, 7
- Sample injectors, 56
Screening of the detector-recorder connection, 88
Separation process, 1
Soap film flowmeter, 25
 modified, 26
Split stream process, 56
Splitters, 62
Steel capillaries, 31
- Temperature, effect of, 21
Theory, 1
- Van Deemter equation, 6
Van Deemter-Golay equation, 4, 8
Viscosity of the carrier gas, 23
