

INDEX

- Acidity-basicity, 70
 of organosilicon amines, 55
 of organosilicon ethers,
 70, 81
 quantum chemical calculations, 271
- Affinity chromatography, 23
- Agents
 coupling, 10
 derivatizing, 9
 silylating, 9
- AJCP method, 125
- Alpha effect, 261, 265, 271
- Anchimeric assistance
 heterolysis of Si-C bond,
 63, 89
 ionization of C-SO₂Cl bond,
 60
 ionization of C-X bond, 75
 trans elimination, 76
- Approximation, Born-Oppenheimer, 234
- Atomic orbitals, classification of, 235
- Back-bonding, 141, 213, 265
- Back-donation, 141, 269
- Basis set
 extent of, 248
 flexibility of, 248
- Beta effect, 265
- Biological activity, 1, 2, 9,
 18
- Bond angles
 SiOSi, 248
- Bond, Si-C, 4
 cleavage of, 4, 264
- Bridging interaction, 77, 78
- Carbon-functional compounds
 aliphatic, 122, 142
 aromatic, 122, 196
- Charge-transfer spectra, 251
- Chemical reactivity, classification of, 277
- Chemical shift
²⁹Si, general trends, 129
²⁹Si, theory, 132
- Chromatographic purification
 of antithrombin, 24
 of carboxypeptidase, 24
 of heparin, 24
- Composite material, 11, 14
- Conformation, 144, 196
 effect on basicity, 274
 effect on reactivity, 53, 63
- Coupling constants, 125, 142,
 144, 197
- CP method, 125
- DEPT method, 125
- Diamagnetic shielding, 133
- Dihedral angle, 145
- Dipole moments, 253
- Direct synthesis, 2
- Disilene, quantum chemical calculations of, 287
- Dissociation of organosilicon
 benzoic acids, 50, 67
 carboxylic acids, 54
 cyanohydrins, 53
- d orbitals
 contraction of, 246
 diffuseness of, 245
 energetic aspects of
 participation of, 246

- d orbitals (continued)
 hybridization of, 241
 neglect of, 233, 265
 participation of, 244, 245
 at silicon, 248
 transformation properties
 of, 237
- Double bond polarity, 195
- Dual polar effects, 59
- DSPI method, 125
- Edman degradation, 25
- Effect of substituent, 153, 264
- Elasticity modulus, 18
- Electron capture detection, 9
- Electronic density, 153
- Electronegativity, 138, 259
 correction for, 145, 148
 global atomic, 262
 orbital, 262
 Pauling, 261
- Enantioselective reactions
 hydrogenation, 324
 hydrosilylation, 324
- Engelhardt-Radeglia-Wolff
 (ERW) shielding theory,
 134, 155
- Ethylchlorosilanes, 3
- Fillers of polymers, 11, 17
- Functional group, 1, 4
- Gated decoupling, 124
- Ground state O-Si coordination,
 105
- Group I derivatives, NMR
 spectra of, 161
- Group II derivatives, NMR
 spectra of, 161
- Group IV derivatives, NMR
 spectra of, 161
- Group V derivatives, NMR
 spectra of, 166
- Group VI derivatives, NMR
 spectra of, 174
- Group VII derivatives, NMR
 spectra of, 184
- Hybrid orbitals, 241
- Hybridization, 238, 241
 sp^3 , sd^3 , 242, 244
- Hydrogenation, enantioselective,
 3, 24
- Hydrolysis, 1, 9, 10
- Hydrosilylation, enantioselective,
 3, 24
- Hyperconjugation, 141, 234,
 250, 253, 257, 291
 experimental evidence of,
 241
 extent of, 247
 HMO model of, 241
 theoretical aspects of,
 244, 247
- Ionic character, 138
- Immobilization of
 cysteine, 22, 23
 enzymes, 18, 21
 lysine, 21
 metal complex catalysts,
 2, 25
 pepsin, 21, 22
 peptides, 18, 21
 proteins, 18
 tyrosine, 21, 22
- INADEQUATE method, 125, 143
- INEPT method, 125
- Interaction, bridging, 77, 78
- Interaction, intramolecular
 between Si and C, 83, 93,
 98, 107
 between Si and N, 85, 94,
 100
 between Si and O, 86, 94,
 101, 108
 between Si and halogen, 91,
 98, 106, 110
- Interaction
 (p-d) π , 141, 190, 208, 219,
 233, 249, 250, 252, 264

- Interaction (continued)
 (p-d) σ , 233, 249, 250
Internal rotation, 146
 Fourier component analysis
 of, 266
Isodesmic reactions, 266, 276

Kaolin, treatment of, 18
Karplus equation, 145

LCAO approximation, 235,
 247, 249
LFER, 205, 263
Liquid crystals, 152

Maximum overlap criterion, 243
Merrifield resin, 24
Methylchlorosilanes, 3
Methylsilylene, stability of,
 285
Molecular properties
 acidic-basic, 271
 collective, 255
 one electron, 255
NMR, ^{29}Si , 120, 155
 measurements of, 123, 124
 solvent effect, 128

NQR spectra, 261
Nuclear Overhauser effect,
 123, 150

One-center calculation, 247,
 249
Orbital
 angular part of, 235
 concept of, 234
 Gaussian type, 245
 hybrid, 241
 localized, 255
 radial part of, 235
 Slater type, 136, 244
 strictly localized, 255, 257
Oriented molecules, 151

Paramagnetic shielding, 133

Phenylchlorosilanes, 2
Photoelectron spectra, 251
Polarizability of silicon, 276
Polysilanes, aromatic behavior,
 259
PREP method, 125
Propylchlorosilanes, 3
Proton, diastereotopic, 198
PSSPI method, 125

Reactions
 isodesmic, 266, 276
 of organosilicon acetals,
 hydrolysis, 67
 of organosilicon alcohols, 59
 acid-base equilibria, 70
 acid-catalyzed rearrange-
 ment, 60
 addition to carbonyl bond,
 59
 cleavage of benzyl-silicon
 bond by base, 62
 displacement of hydroxyl
 by halogen, 60
 of organosilicon alkenes, 40
 free-radical additions, 43
 heterolytic additions, 41
 of organosilicon alkyl
 acetates, 63
 acid hydrolysis, 66
 alkaline hydrolysis, 63
 of organosilicon alkyl
 halides, 73
 acid-base equilibria, 81
 carbonium ion forming
 reactions, 74
 Friedel-Crafts alkylation,
 81
 hydrolysis of Si-H bond, 80
 reaction with Grignard
 reagent, 80
 reaction with sodium atoms,
 79
 $\text{S}_{\text{N}}2$ displacement reactions,
 76

- Reactions (continued)
- of organosilicon alkyl sulfonates, acetolysis, 63
 - of organosilicon amines, acid-base equilibria, 55
 - of organosilicon aromatic compounds, 46
 - dissociation of benzoic acids, 50
 - electrophilic substitutions, 46
 - solvolysis of cumyl chlorides, 52
 - of organosilicon carboxylic acids, dissociation, 54
 - of organosilicon esters, hydrolysis, 54
 - of organosilicon ethers, 67, 68
 - acid-base equilibria, 70
 - hydrolysis, 67
 - methanolysis, 68
 - of organosilicon ketones, dissociation of cyanohydrins, 53
 - of organosilicon thiols, heterolytic addition, 72
- Reference, NMR, 126, 128
- Relaxation reagents, 124
- Relaxation time, 124
- Resonance, 256
- Retention time, 9
- Rotational potential, analysis of, 267
- Shielding
- diamagnetic, 133
 - paramagnetic, 133
 - theory (ERW), 134
- Shielding constant, relative, 137
- Shift reagent, 151
- Silabenzene, quantum-chemical calculation, 288
- Silaethene, geometry of, 285
- Silanone, quantum-chemical calculation, 287
- Silicenium ion, calculated stability, 276
- Silicon
- multiple bonded, 282
 - reactivity of, 283
 - stability of, 284
 - polarizability of, 276
- Silicon directed migrations, 60, 61
- Silyl anion, stability of, 277
- Silyl substituent, electronic effect, 263
- Slater orbitals, 136, 244
- Solid state synthesis of peptides, 24
- Spacers, 25
- Spectra
- charge-transfer, 241
 - NQR, 251
 - photoelectron, 232
 - of silaethene, 285
 - UV, 253
- SPI method, 125
- SPT method, 125
- Stability
- increased
 - of α -silyl anions, 277
 - of α -silylated compounds, 39
 - of β -silylated compounds, 40
 - of multiple bonded silicon, 284
 - of silyl anion, 277
- Stabilization
- of carbanion, 40
 - of carbonium cation, 62
 - of oxonium ion, 67
 - of radical, 43, 44
- Stationary phases, 9
- Steric hindrance
- to aromatic ortho substitution, 50
 - of coordination site, 2
 - to nucleophilic displacement at silicon, 39

- Steric hindrance (continued)
 of reaction center, 63, 64
 of solvation, 56, 64
Substituent chemical shift,
 SCS, 140, 154
Substituent classification,
 129
Substituent constants, 203
 of silyl groups, 51, 69, 71,
 80, 81, 215, 264
Substituent effect, 39, 203
 additivity of, 153, 218
 transmission, 208
Surface tension, 11
Surface treatment, 10, 17
Symmetry, 249
- Tensile strength, 18
Thermal expansion
 of glasses, 11
 of polymers, 11
Thermosets, 16
Thermostability, 9, 14
Thixotropy, 11
Trisyl group, 39, 40
- UV spectra, 253
- Valence shell expansion, 233,
 243
Valence states
 sd³, 242, 244
 sp³, 242, 244, 262
- Wettability, 11
