

## SUBJECT INDEX

- Action spectra  
  cell killing 73, 85, 92  
  chromosome aberrations 92
- Aging  
  alterations in chromatin 464  
  chromatin  
    alkali lability 547  
    cross-linking 462, 467  
    extractability 462, 467  
    template capacity 474  
    thermal stability 469  
  chromosome aberrations 464  
  collagen cross-linking 458  
  cross-linkage hypothesis 443  
  disease and lifespan 450  
  DNA repair 416, 537  
  environmental factors 446, 519  
  genetic complexity of 453  
  lifespans of primates 447  
  lipid peroxidation 457, 520  
  neoplastic disease 449, 505  
  pathology 448  
  primary aging process 451  
  radiation-induced  
    duration of life exposure 501  
    fractionated exposure 505  
    lymphoma 505  
    single dose 496  
  radical-induced 456, 458, 519  
  sex differences 496  
  survival and lifespan 444  
  vitamin E 519  
  WI-38 cells 519
- Alkylation  
  attachment sites on DNA 290, 343
- carcinogenesis 288, 341  
  DNA-protein cross-links 198, 287  
  mutagenesis 288  
  repair of adducts 294, 304
- Amino acids  
  as photosensitizers 159  
  bound to DNA (natural)  
    growth conditions 33  
    nature of attachment 45  
    tumor vs normal 38  
  viruses 43  
  cross-linking with nucleic acids  
    ionizing radiation 165  
    UV radiation 78, 207  
  cross-linking with proteins 176  
  mechanism of adduct formation 207
- Aminoacyl tRNA synthetase  
  cross-linking with tRNA 131
- Amino group substitution reactions 225
- Aromatic polycyclic hydrocarbons  
  reactions with DNA 288, 341, 373  
  role in carcinogenesis 288, 341, 373
- Bacteria  
  amino acids bound to DNA 33  
  bromouracil substitution 73  
  cell fractionation 2

- DNA attached to membrane 3
  - DNA-protein cross-links 67
  - origin for DNA replication 4
  - photosensitized killing 75, 151
  - thymine starvation 69
  - UV radiation studies 67
  - X-ray studies 76
- Bacteriophage
- cross-linking of gene 5 protein and DNA 131
- Benzpyrene
- carcinogenesis 373
  - cross-linking of DNA and protein 153
- Bisulfite
- addition reactions 225
  - carcinogenesis 235
  - catalysis 227, 231
  - mutagenesis 234
- Bovine serum albumin
- cross-linking with DNA
  - photosensitized 151
  - UV radiation 125, 132
- Bromouracil substitution
- enhancement of cross-linking 73, 99, 124, 154, 277
- Carcinogenesis
- activation of carcinogens 345
  - age specific incidence 505
  - alkylation 287, 343
  - amino acids bound to DNA 38
  - aromatic polycyclic hydrocarbons 288, 341, 373, 411
  - benzpyrene 153, 200, 351, 373
  - DNA-protein cross-links 153, 200
  - electrophilic agents 345
  - gene derepression 62
  - genetic basis of 407
  - metabolic activation of carcinogens 345
  - nucleophilic agents 235
  - polycyclic hydrocarbons 288, 341, 373, 411
  - radiation induced 505
  - radicals and 373
  - relationship to mutagenesis 357, 407
  - repair of DNA adducts 294, 355, 399
  - structural alterations in DNA 290, 352
- Cell fractionation 2
- Chemically-induced cross-links
- activated intermediates 194, 200, 208
  - alkylating agents 198
  - cytotoxic agents 198
  - mechanisms of formation 194
  - nucleophilic agents 197
- Chromatin (see DNA)
- Chromosomes (see DNA)
- Derepression 59
- DNA
- amino acids bound
    - natural 33
    - radiation-induced 78, 165, 207
  - alkali-labile bonds 17
  - alkylation 287, 343
  - aromatic polycyclic hydrocarbons 288, 341, 373, 411
  - attachment to membranes 3, 44
  - v bodies 16
  - chromosome segregation 4
  - cross-linking with protein
    - in vitro* 123, 232
    - in vivo* 67, 83
  - gene derepression 59
  - helix openings 54
  - isolation techniques 33
  - linkers (mammalian) 11, 38
  - mitochondrial 22
  - nuclear gels 15, 39
  - photochemistry 67, 83, 149, 207

- radiation chemistry 165, 263
  - radiation on linkers 25
  - repair 78, 99, 294, 304, 355, 399, 416, 537
  - replication 5
  - residual protein 12, 33
  - structure alteration by carcinogens 352
  - subunit hypothesis 17, 23
  - UV radiation 67, 83, 149, 207
  - X-irradiation 165, 263, 511
- DNA polymerase
- UV cross-linking with DNA 125
- DNA-protein cross-links
- aging 443
  - bacteria 67
  - biological importance 68, 92, 106
  - bovine serum albumin 125, 132, 151
  - chemical nature of 78, 87, 182, 207, 225, 243, 261, 287, 315
  - DNA polymerase 125
  - DNA replication and 75
  - gene 5 protein 131
  - lac* repressor 127
  - mammalian cells 83
  - methods of detection 67, 84
  - nucleophilic catalysis 225
  - photosensitized reactions 75, 149
  - repair of 78, 99
  - RNA polymerase 127
  - UV-induced 67, 83, 125, 149, 207, 232, 243, 315
  - X-ray-induced 76, 165, 212, 219, 261
- Dry cells
- enhancement of cross-links 72
  - increased UV sensitivity 72
- Frozen cells
- enhancement of cross-links 70
  - increased UV sensitivity 70
- Gamma-ray (see Ionizing radiation)
- Gene
- derepression 59
  - regulation 53
  - 5-protein cross-linked to DNA 131
- Gompertz function 445, 494
- Histones
- cross-linking with DNA 83, 154
  - gene regulation 57
- 5-Iodo-2'-deoxyuridine
- cross-link with thymidine kinase 157
- Ionizing radiation
- aging 493
  - cross-linking with DNA
    - alcohols 269
    - amines 271
    - amino acids 174, 214, 272
    - DNA 180, 274, 276
    - formate 268
    - inhibition of by O<sub>2</sub> 180
    - protein (*in vitro*) 165, 180
    - protein (*in vivo*) 76, 165
    - tables of adducts 219, 266, 272, 275, 278
    - water 266
  - cross-linking with protein
    - amino acids 176
    - DNA 76, 165, 180
    - nucleic acid bases 180
  - cross-linking with RNA
    - amino acids 177
  - mechanisms of nucleic acid protein binding 182
  - radiation chemistry of DNA 212, 263
  - uracil radiation products 212
- lac* repressor

- cross-linking with DNA 127, 154
- Linkers in DNA 11
- Mammalian cells
  - aging 443, 493, 519, 537
  - amino acids bound to DNA 33
  - alkylation 287
  - carcinogenesis 341, 377
  - cell fractionation 2
  - chromosomal linkers 11
  - chromosome segregation 4
  - DNA attachment to membranes 3
  - DNA-protein cross-links (UV) 83
  - DNA subunit hypothesis 17, 23
  - gene regulation 53
  - mutagenesis 399
  - oxygen toxicity 530
  - radiation studies
    - DNA linkers 25
    - DNA-protein cross-links 165
    - life shortening 493
  - repair of DNA 294, 355, 399, 537
  - WI-38 cells and aging 519
- Membranes
  - attachment to DNA
    - normal 3, 43
    - radiation-induced 151
  - role in chromosome segregation 4
  - site of DNA replication 5
- Messenger RNA synthesis 54
- Mutagenesis
  - anti-mutagenic drugs 422
  - alkylating agents 288
  - genetic basis of 407
  - nucleophilic agents 234
  - relationship to carcinogenesis 357, 407
  - role of DNA repair 399
  - somatic (evolutionary perspective) 426
- Nucleophilic reagents 197, 225
- Photoaffinity labeling
  - antibodies 325
  - chymotrypsin 326
  - protein-nucleic acid interactions 330
  - reagents 316
  - ribosomes 156, 327
  - techniques 316
  - topological probes 334
- Photoreactivation of RNA viruses 113
- Photosensitized reactions
  - adducts to nucleic acid 253
  - bacteria 75, 151
  - DNA-protein cross-links
    - in vitro* 149
    - in vivo* 75, 151
  - mammalian cells 531
  - photodynamic action 75, 150, 531
  - self-photosensitization 159
  - triplet-state energy transfer 151
- Polycyclic aromatic hydrocarbons
  - reactions with DNA 341, 373
  - role in carcinogenesis 341, 373
- Protein
  - capsomer proteins (virus) 105
  - photooxidation 151
  - see DNA-protein cross-links
  - see RNA-protein cross-links
- Purines
  - alkylation 287, 343
  - carcinogens 341, 388
  - photochemistry 243, 330
  - radiation chemistry 165, 261
- Pyrimidines
  - alkylation 287, 343
  - carcinogens 341

- photochemistry 78, 149, 207, 243
- radiation chemistry 165, 261
- Radicals
  - role in carcinogenesis 373
  - scavenging and aging 519
- Repair of DNA
  - alkylation 294, 304
  - carcinogens 355
  - DNA-protein cross-links 78, 99
  - excision repair 294, 541
  - postreplication repair 304
  - role in
    - aging 537
    - carcinogenesis 399
    - mutagenesis 399
- RNA
  - cross-linking to protein 105, 131
  - hydrate formation 245
- RNA polymerase
  - addition of thiouridine triphosphate 157
  - cross-linking with DNA 127
- RNA-protein cross-links
  - tRNA and aminoacyl tRNA synthetase 131
  - virus 105
- Substitution reactions leading to cross-links 225
- Thiouridine adducts 156
- Thymidine kinase
  - 5-iododeoxyuridine adduct 157
- Thymine starvation
  - enhancement of cross-links 69
- Tocopherol (see Vitamin E)
- Transcription 54
- tRNA
  - base sequences 134, 140, 354
  - cross-linking with aminoacyl tRNA synthetase 131
  - structure (three dimensional) 141, 142
  - thiouridine adducts 156
- UV radiation
  - amino acid-nucleic acid adducts 78, 207, 243
  - DNA-protein cross-links
    - bacteria 67
    - in vitro* 123
    - mammalian cells 83
    - viruses 105
  - protection by viral capsomer proteins 111
  - reactions of nucleic acids 243
  - sensitization by
    - bromouracil substitution 73, 99
    - drying 72
    - freezing 70
    - thymine starvation 69
    - viral capsomer proteins 115
  - table of nucleic acid adducts 218
- Viruses
  - bound amino acids 43
  - oncogenic (effects on cellular transcription) 60
  - protein-nucleic acid cross-links (UV) 105
- Vitamin E
  - protection of human cells in culture 519
- X-ray (see Ionizing radiation)
