

# Index

- $\delta$  rotor angle, 167
- $\omega$  rotor speed, 167
- $\omega_0$  synchronous speed, 167
- $H_\infty$  control, 351
- $H_\infty$  norm, 351
- $L_2$  -gain, 345
- $L_2$  -space 344
- $I_d$  d-axis current, 172
- $I_f$  excitation current, 174
- $I_q$  q-axis current, 172
- $V_d$  d-axis voltage, 172
- $V_q$  q-axis voltage, 172
- $E_q$  idling electrical potential, 174
- $D$  damping constant, 168
- $H$  inertia coefficient of a generator set, 168
- $M_m$  mechanical input torque, 167
- $M_e$  the electric output torque, 167
- $M_D$  damping torque, 167
- $\bar{V}_{REF}$  reference node voltage, 183
- $T_{d0}$  time constant of field winding, 186
- $\psi_{fd}$  total flux linkage of excitation winding, 177
- $E'_q$  transient electric potential, 175
- $P_e$  active electrical power, 169
- $P_m$  mechanical power, 169
- $P_D$  damping power, 169
- $Q_e$  reactive power, 177
- $V_f$  voltage of field winding, 185
- $V_s$  voltage of the infinite bus, 179
- $x_d$  d-axis synchronous reactance of a generator, 174
- $x_q$  q-axis reactance of a generator, 174
- $x'_d$  transient inductance of generator, 175
- AC and DC side filters, 191
- Admittance matrix, 182
- Advanced steam valving, 186
- Affine nonlinear control systems, 33
- Apparent output power, 177
- Armature reaction, 177
- Asymptotically stable, 93
- Brunovsky normal form, 62
- Closed loop system, 201
- Composite transformation, 85
- Computer simulations, 259
- Conditions of exact linearization via state feedback, 73
- Constant
  - DC current control, 196
  - extinction angle, 194
  - extinction angle control, 197
  - impedance, 181
- Control
  - strategy or control law, 187
  - valve (CV), 189
- Conventional control, 256
- Converter
  - station, 277

- transformer, 191
- circuit of inverter, 193
- process, 192
- Coordinate
  - Transformation, 25
  - mapping , 36
- Cylindrical rotor machine, 176
- $d, q$  coordinates of a synchronous generator
  - 27
- Damping
  - effects, 177
  - windings, 174
- DC
  - control system, 196
  - transmission, 191
- DDP, 109
- Dead band, 245
- Demagnetization, 177
- Derived mapping, 36
- Diffeomorphism, 25
- Dissipative systems, 348
- Disturbance decoupling, 61
- Dynamic
  - characteristic, 303
  - deviation, 93
  - equations, 247
  - performance, 205
  - response, 202
- Effective value, 170
- Effects of the valve opening limit, 188
- Electrical-hydraulic, 245
  - transducer, 187
- Electromagnetic
  - dynamic equation for field winding,
    - 185
  - transient process, 223
- Exact linearization, 26
  - via state feedback, 60
  - conditions, 87
  - design method, 59
- Excitation flux linkage, 178
- Exogenous disturbances, 109
- External dynamics, 91
- Fast valving, 188
  - controller, 187
- Feedback variable measurements, 217
- Field winding, 166
- Firing circuits, 196
- Flux linkage, 171
- Flyballs, 245
- Frobenius theorem, 60
- Hamiltonian
  - function, 64
  - Hamilton-Jacobi-Isaacs (HJI), 356
- High-pressure regulated valve or steam
  - controlled valve, 188
- High-pressure, medium-pressure and
  - low-pressure turbines , 187
- HVDC , 277
- Ideal generator, 171
- Impedance angle, 184
- Implementation of nonlinear excitation
  - control, 217
- Index number, 151
- Inductance, 170
- Initial steady state generator active power,
  - 220
- Instantaneous peak values of phase voltage
  - and current, 170
- Integral curves, 153
- Intercept valve, 247
- Internal dynamics, 91
- Inverse mapping or transformation, 38
- Inverter, 191
- Involutivity, 26
- Jacobian matrix, 31
- Large-capacity steam turbine generator set,
  - 187

- Large-disturbance stability, 222
- Lie-
  - bracket, 25
  - derivative, 25
- Limit block, 188
- Linear
  - multi-variable control, 205
  - Linear Optimal Excitation Controller (LOEC), 222
  - quadratic regulation (LQR), 63
  - linearized normal form, 50
  - linearly independent vector fields, 152
- Line-to-earth capacitance of DC
  - transmission line, 192
- Load compensator, 313
- Local diffeomorphism, 30
- Magnetic
  - circuits, 170
  - conductivity, 170
- Mathematical model of multi-machine
  - power systems, 223
- Mechanical power, 209
- Mechanical-hydraulic, 245
- medium-pressure regulated valve or fast
  - valve, 187
- MIMO affine nonlinear control systems, 121
- MKS units, 170
- Multiple inputs and multiple outputs
  - (MIMO), 121
- Mutual inductance, 170
- Natural power, 316
- Nominal operation state, 197
- Nonlinear
  - excitation control law, 217
  - optimal excitation control (NOEC), 223
  - state feedback, 209
- Normal affine nonlinear system, 209
- Normal opened contact, 188
- Oil-pressure control signals, 187
- Oil-servomotor, 247
- One inertia block, 189
- One-machine, infinite-bus system, 17
- Penalty function, 3428
- Performance index, 2
- Per-unit instantaneous output power, 170
- Phase controller, 196
- Physical dynamic simulations, 222
- PID (proportional integral differential), 200
- Power
  - fraction, 187
  - modulation, 284
  - Power System Stabilizer (PSS), 205
- Prime movers, 245
- $q$ -axis transient electric potential, 178
- Reactive
  - power compensation, 282
  - power flow, 310
- Reactor, 310
- Rectifier, 191
  - transformer, 193
- Reheater, 246
- Relative degree, 26
- Riccati algebraic equation, 65
- Robust control, 343
- Robustness, 343
- Rotor windings, 170
- Salient-pole generator, 183
- Self admittance, 182
- Self inductance, 170
  - inductive reactance , 174
- Servo
  - mechanisms, 245
  - systems, 245
- Signal amplifier, 196
- SISO (single input single output), 59

- affine nonlinear system, 59
- Small disturbance stability, 205
- Smoothing reactors, 191
- Speed resolution, 245
- State feedback, 59
  - law, 94
- Static reactive power compensator, 309
- Static Var system (SVS), 309
- Stator
  - current, 170
  - windings, 170
- Steady state, 196
- Steam
  - flow, 246
  - turbine, 187
  - turbine with reheater, 187
  - valving control system, 189
- Storage function, 348
- Surge-impedance loading(SIL), 316
- Swing equations, 166
- Symmetric three-phase system, 170
- Synchronous
  - operation, 176
- System compensator, 314
- Terminal voltage, 170
- Three-phase
  - controllable bridge-type circuit, 192
  - short circuit fault, 240
- Thyristor
  - switched capacitor (TSC), 325
  - controlled reactor (TCR), 319
- Time lags, 245
- Time scale of electromechanical transient
  - process of a power system, 189
- Transformation matrix, 107
- Transformer electric potential, 174
- Transient
  - state, 178
  - stability of power systems, 186
- Two-phase short circuit fault, 256
- Valve opening, 187
- Variational method, 63
- Vector
  - field, 26
  - field sets, 26
- Voltage
  - losses, 176
  - stability, 282
  - current characteristics, 278
- Water hammer, 245
- Whole region of generator operation state, 189
- Zero dynamics design method, 91
