SUBJECT INDEX

A

- adiabatic rotation, 119
- Adler-Bell-Jackiw anomaly, 315, 316, 318
- α -particle binding energy, 253
- Altarelli-Parisi evolution kernels, 37
- anomalous dimensions, 23, 37, 41, 42, 45, 48
 - anomalous dimension mixing matrices, 38, 43, 48, 49
- anomalous magnetic moment, 346
- anomaly
 - ABJ, 345
 - (*See* Adler-Bell-Jackiw ...)
 - baryon, 345, 346
 - chiral, 345, 346
 - triangle, 345, 346
- anyon, 331, 332, 337, 341
- Appell's polynomials, 49
- asymmetry in quasi-elastic electron scattering, 266
- asymmetry parameters, 169, 173
- axial gauge, 54, 59
- axial Ward-Takahashi identity, 148

B

- background-field method, 38
- background gauge, 40

- baryon asymmetry of the universe, 316, 327
- baryon mass spectrum, 104, 105
- baryon number violation, 315, 316, 318, 319, 327, 328, 329
- baryon operator, 38
- baryons as solitons, 79
- B decay, 194
- beta function, 3
- Bethe Salpeter equation, 92
- bifurcation, 321, 322, 323
- bisphaleron, 316, 320, 321, 322, 323, 324, 325, 327
- Bloch function, 144
- Borel mass, 23
- Borel transformation, 22
- bosonization, 130
- bosonization procedure, 111
- boson mappings, 274
- Braid group, 331, 332, 338, 339
- break-up process, 248, 249
- Brodsky-Lepage potentials, 37, 38
- brown-muck, 177, 178
- C
- Chern-Simons number, 316, 318

319, 320, 322, 324, 325

Chern-Simons theory,
331, 333, 337, 341

chiral angle, 91

chiral anomaly, 128

chiral perturbation theory, 125, 208

chiral symmetry, 109

coherent pion decay, 229, 231, 323, 237

collective Lagrangian, 100

collective quantization, 110

collective subspace, 271, 272

Compton scattering, 346

condensate parameters, 21

condensates

- gauge-dependent, 57
- in QCD, 51

confinement, description by no-pole propagators, 67, 74

confinement mechanism, 139, 143

confinement, weak-coupling description of, 63-75

conformal invariance, 38

- conformal operator, 38

constituent quark mass, 92

continuation by rational approximants, 67

correlation function, 111

Coulomb gauge, 4

counterterms (CT) into the Hamiltonian, 6

cranking, 99

D

decay rates, 168, 169

Δ excitation, 229

- in nuclei, 229
- in the proton target, 229

dimensional regularization, 4, 6, 41

diquark, 151, 312

- as a bound object, 153
- as a mathematical tool, 152
- as a temporary qq cluster, 152
- as the rest of a baryon after knockout, 153
- Stockholm model, 153

Dirac sea, 90

- contribution to the energy functional, 94, 95

disconnected insertion, 9, 11

Drell-Yan model, 166

dynamical fermion calculation, 15

Dyson boson mapping method, 272

Dyson mapping, 274, 275

Dyson-Schwinger equations, of QCD, 63, 70, 73

E

electric dipole amplitude, 346

electric transition, 134

electroweak phase transition, 328, 329

elementary excitations, short-lived, 67, 74

Euclidian Dirac operator, 93

exclusive processes, 37

extended perturbative solution, for QCD, 65

external-field method, *see* background-field method

F

factorization, 127

Faddeev equation, 244

fermion level crossing, 319, 327

flavor rotating frame, 100

flavor-singlet axial charge, 14

Fock Schwinger gauge, 41, 53

Fock space, 37
 form factors, 165, 166, 172, 173
 fractional statistics, 331
 $f_0(1400)$, 219
 $f_0(975)$, 219

G

γ^5 -invariance, 300
 gap equation, 92
 g_A sum rule, 23
 gauge phase factor, 40
 Gaussian noise, 10
 Gegenbauer polynomials, 49
 Gell-Mann, Oakes, Renner relation, 148
 Gell-Mann Okubo relation, 120
 ghost propagator, 59
 gluon condensate, 22
 gluon propagator, 58
 gluon propagator, nonperturbative, 67, 68, 74
 Goldberger-Treiman relation, 19, 148

H

hadronic current tensor, 257
 half off-shell nucleon, 204
 hard scattering scheme, 171
 heat kernel approach, 42
 heavy-flavor-conserving, 182
 heavy quark effective theory, 175
 heavy quark symmetry, 177, 178
 hedgehog, 93
 hedgehog ansatz, 112
 Higgs mass, 317, 321, 322, 323, 324, 325, 326, 327, 329
 high-energy scattering processes, 37

higher-order chiral Lagrangians, 126
 Holstein-Primakoff boson mappings, 275
 Holstein-Primakoff mapping, 274

I

imaginary part, 80
 inclusive processes, 37
 instanton, 287, 314, 315, 319
 instanton condensation, 297, 298
 instanton density, 300
 instanton induced quark force, 299, 302, 309, 310, 312
 instanton interaction, 295
 interpolating field method, 180
 Isgur-Wise function, 164, 169, 182
 isobar-hole model, 229, 231, 234

K

Kaon-pion scattering, 221
 $K\bar{K}$ bound state, 219, 222
 Kobayashi-Maskawa matrix elements, 169
 Kogut Susskind Hamiltonian, 6
 $K \rightarrow 3\pi$, 127
 $K \rightarrow \pi\gamma\gamma$, 133
 $K \rightarrow \pi\pi\gamma$, 134

L

Lagrangian quark mass, 11
 Landau-Migdal parameter, 234
 lattice gauge theories, 51, 52, 60
 lattice regularization, 4, 6
 local operator, 37
 logarithms, in perturbative QCD, 66
 logarithms, nonperturbative, in QCD, 72

Lorentz gauge, 53
 Lorentz group, 38
 Low-Gell-Mann-Goldberger theorem, 346
 Lüscher's Yang Mills theory, 4

M

magnetic transition, 133
 mass-shell approximation, 179
 Maurer Cartan form, 113
 maximal-decoupling principle, 271, 272, 282
 mechanism of nonperturbative logarithms, 72
 meson-baryon vertex form factors, 234
 meson decay constants, 92, 105
 meson exchange currents, 203
 meson exchange model, 218
 meson operator, 38
 MIT bag model, 139
 modified minimal subtraction scheme, 43
 monopole pairing model, 277
 multipole-form boson Hamiltonian, 279
 multipole-form boson image, 275, 277

N

Nambu-Jona-Lasinio model, 79, 109, 139, 288, 298
nd cross section, 244
 negative mode, 323, 328
 neutron case, 29
 neutron-proton mass difference, 26
 NJL model, 90
 Noether charges, 103
 non-analyticity in coupling constant, 65
 nondegenerate multi-*j* pairing interactions, 283
 nondegenerate multi-*j* pairing model, 280
 nonet symmetry, 134
 non-Hermitian Hamiltonians, 272
 non-integrable phases, 332, 335, 341
 non-local Lagrangian, 140
 nonlocal light-cone expansion, 37
 nonlocal operators, 37
 nonperturbative solutions, for QCD, 65
 non-spectator (W-exchange) model, 193
n-p mass difference Δm_{np} , 156
 nuclear quark model, 310, 312
 nucleon axial coupling constants, 19
 nucleon scalar form factor, 225
 nucleon scalar radius, 227
 nucleon's charge RMS radius, 154
 nucleon sigma-term, 225

O

one loop model, 205
 operator product expansion, 18, 37, 51
 operator-product expansion, of QCD vertices, 66
 optimal auxiliary boson Hamiltonian, 279
 optimal auxiliary Hamiltonian, 273, 283
 overlap, 166, 170, 173

P

pairing-form Dyson boson image, 275
 pairing-form Holstein-Primakoff boson image, 275

Park operator, 278
 partitions, 252
 Pauli-principle constraints, 272, 278, 282
 PCAC, 349
pd cross section, 244
 photoproduction, 350
 physical projection operator, 277, 281
 $\pi - a_1$ mixing, 93, 95
 $\pi - \rho - a_1$ soliton, 96
 $\pi - \omega$ soliton, 98
 pion Compton scattering, 128
 pion decay constant, 148
 pion electromagnetic form factor, 220
 pion-pion scattering, 219
 pion scalar form factor, 225
 plane wave impulse approximation in
 inelastic electron scattering, 259
 (*p, n*) reaction, 229, 231
 pole-free quark propagator, 143
 propagator, nonperturbative, of gluon
 field, 67, 68, 74
 propagator, nonperturbative, of quark
 field, 69, 75
 propagators, 80
 proper time regularization, 91, 94
 proper vertices, of QCD, 63, 64
 proton spin crisis, 9, 15
 P-wave mesons, 304

Q

QCD, 139
 QCD at finite temperature, 52
 QCD Hamiltonian, 3
 QCD scale parameter, 301
 QCD sum rules, 17, 51, 52, 55
 QCD sum rules for the proton mass, 28
 QCD vacuum, 287
 quantum chromodynamics, 37, 287
 quark condensate, 21, 92
 quark-diquark structure, 151
 - application to nucleon's
 RMS radius, 154
 quark loop, 80
 quarkonium, 75
 quark pole mass, 54, 57
 quark propagator, 56
 quark propagator, nonperturbative,
 69, 75
 quasifree electron-nucleus scattering,
 203, 213
 quasi-free electron scattering, 213
 quenched QCD, 9

R

Rarita-Schwinger vector spinor field, 183
 rational approximants, for QCD
 vertices, 67-69
 regularization, 3, 111
 renormalization, 3, 37
 wave function renormalization,
 42
 renormalization-group invariant mass
 scale, in QCD, 57
 response function, 229, 230
 Rosenbluth formula, 347

S

scalar charge, 11
 scalar form factors, 225
 Schwinger-Dyson equations, of QCD,
 52, 60, 63, 70, 73
 Schwinger-Fock gauge, 292
 sea-quark contribution, 9, 14

selfconsistency, 81
 semiclassical quantization, 99
 semileptonic $\bar{B} \rightarrow D(D^*)$ transitions, 164
 semileptonic $\Lambda_b \rightarrow \Lambda_c$ transitions, 165, 166
 sigma-term, 225
 Skyrme model, 110, 346
 Slavnov-Taylor identities, 52, 59
 S-matrix, unitarity of, 74
 solitonic solutions, 82, 110
 spectator model, 193
 sphaleron, 315, 316, 319, 320, 321, 322, 323, 324, 325, 326, 327, 328, 329
 spin content of nucleon, 110
 spin-dependent amplitude, 346
 spin-flavor symmetry, 177
 spin observables, 236
 spinor calculus, 38
 spin-transfer-coefficient, 247, 248
 spontaneous breakdown of chiral symmetry, 288
 spontaneous breaking of chiral symmetry, 92, 110
 spontaneous mass scale, of QCD, 65
 spreading potential, 233
 string operator expansion, 37
 strong and weak πNN coupling constants, 32
 superficially divergent vertices, of QCD, 64
 SU(3), 99
 SU(3)-symmetry, 109
 sum rule for g_A^S , 24
 Sutherland-Veltman theorem, 349

T

tensor analyzing power, 233, 237, 246
 θ -angle symmetry, 7
 't Hooft's Lagrangian, 301
 three-gluon vertex, nonperturbative, 68, 69
 topologically inequivalent vacua, 315, 316, 317, 318, 319, 324, 325
 trace variational principle, 272
 tree approximation, 295, 297
 trinucleon spin-dependent spectral function, 261
 trinucleon spin structure functions for quasi-elastic electron scattering, 263
 trinucleon spin structure functions in deep-inelastic electron scattering, 269
 triton binding energy, 253
 twists, 37
 nonleading twist effects, 37
 two-nucleon t-matrix, 244

U

unitarity, of S-matrix, with confined sectors, 74

V

vacuum occupation numbers, 95
 vacuum of a torus non-abelian gauge field theory, 7
 vacuum polarization, 9, 11
 vector analyzing powers, 246
 vector dominance model, 222
 vector mesons, 79
 velocity super selection rule, 178
 vertices
 - in QCD, 59, 60

W

Ward-Takahashi identity, 143, 205

wave functions, 167, 172

weak mixing angle, 317, 319, 325, 326

Weinberg-Salam theory, 315, 316, 317, 319

Wess-Zumino term, 114

Wess-Zumino-Witten terms, 131

Weyl-Heisenberg algebra, 336, 337

Weyl representation, 39

Wilson coefficients, 184

Wilson line integrals, 332, 335, 336, 341

Witten's conjecture, 96, 98, 105

Y

Yakubovsky equations, 252

Yang Mills Hamiltonian, 4

Yang-Mills theory, 287

Z

Z_2 noise, 9, 10
