 - digital transformation, 175
 - forecasting, 180
 - implementation approach, 185
 - IT performance management, 182
 - IT systems topology, 175–176
 - leading edge technologies, 182
 - ML implementation, 184
 - NLP, 183–184
 - prediction, 179
 - real-time data exploration and reporting, 183
 - root cause analysis, 178, 180
 - service management setup
 - automated approach, 176
 - cloudification, 177
 - DevOps and Agile
 - methodologies, 177
 - false positive alerts, 177
 - real-time responses,
 - events, 177
 - systems and data, 176
 - tools and systems topology, 182
- AI strategy
 - adoption scenarios, 27–28
 - data-driven strategy, 22–23
 - internal capabilities, 28
 - use cases, 26–27
- Amazon, 48
- Amazon flywheel
 - AI way-of-working, 63
 - algorithm powered
 - innovations, 61
 - bookseller, 61
 - business model, 64–65
 - conversational interface effect, 62
 - democratizing AI, 63
- Amazon Go, 61, 64
- Artificial general intelligence (AGI), 94
- Artificial intelligence (AI)
 - AGI, 94
 - ANI, 92
 - A Priori, 100
 - ASI, 94
 - benefits, business
 - decision-making, 8–9
 - boardroom (see Boardroom)
 - business value, 72
 - capture and process, 128

Artificial intelligence (AI) (*cont.*)

- categories of learners
 - reinforcement learning, 96
 - supervised learning, 94
 - unsupervised learning, 95
- customer experience, 73
- decision tree, 101
- definition, 10
- dimensional reduction algorithms, 102
- gradient boosting algorithms, 102
- invisible interface (no-user interface), 17–19
- K-means clustering, 99
- KNN algorithm, 99
- learning, 68
- linear regression algorithm, 100
- logistic regression, 101
- marketing and sales, 66
- Naïve Bayes classifier, 98
- operational practices and processes, 67
- organizational, governance, and technological challenges, 73
- procurement and supply chain management, 68–69
- random forest, 101
- research and development, 66
- self-aware machines, 43–44
- sense-and-respond machines, 42
- shared services functions, 70
- SVM, 99
- turning data into insights, 128
- ubiquitous intelligence, 12

Artificial Narrow Intelligence (ANI), 92, 207

Artificial neurons, 102

Artificial Superintelligence (ASI), 94, 211

Assisted intelligence, 13–14

Augmented intelligence, 13, 15–16

Automation, 178–179

Autonomous intelligence, 13, 16–17

Autonomous organizations

- creative passport, 199
- data and AI monetization, 201
- globalized verification systems, 200
- hassle-free customer loyalty programs, 198–199
- innovative audits and compliance systems, 200

- intelligent retail, 197–198
- smarter finance, 197
- transparent governance, 199

B

Biases, 9

- conflicting goals, 25
- data-driven, 24
- emergent, 25
- interaction, 24
- machine, 25
- similarity, 25

Big Data technologies, 20, 102

Blockchain

- and AI
 - advantages, 194
 - efficient and scalable, 194
 - encryption, 194
 - hashing algorithms, 194
- approaches, 192
- benefits, 192–193
- characteristics
 - assets exchange, 191
 - decentralized control, 190
 - immutability, 191
- customer loyalty programs, 199
- distributed network, 190
- proof-of-stake, 192
- proof-of-work, 191
- pruning, 194
- value propositions
 - authentic classifiers and filters, 195
 - business data models, 195
 - data intellectual property rights, 196
 - intelligent predictions, 196

Blocks, 190

Boardroom

- bad decisions, 44
- disruptive competitors, 44
- methodical approach, madness
 - changing customer behaviors, 45
 - cost of inaction, 46
 - embrace dual approach, 46
 - future-back strategy, 45
 - spend time at periphery, 45
- strategic decision-making, 47

Business data models, 195

Business decision-making, 8–9

Business ecosystems, 20

Business model, 64–65

Business value, 72

C

CEOs

adopt fail-fast learn-fast methodology, 89

algorithms, 79

authority and accountability, 86

autonomous intelligence, 78

batch-oriented processes, 86

best practices, 86

business capability, 89

Chief AI Officer (CAIO), 87

Chief Data Officer (CDO), 87

Chief Digital Officer (CDO), 87

democratization, 88, 89

DVD-rental company, 76

ecosystem to leverage, 89

embrace openness and transparency, 77

ethics and cybersecurity, 78

evaluate opportunities, 77

feedback loop, 81

leadership team

black box vs. white box, 85

evaluating AI platforms, 84

feedback loop, 83

language of outcomes, 82

machine learning, 83

point solution vs. integrated

platform, 85

single domain vs. general

purpose, 84

training data, 83

machine learning, 80

machines vs. humans, 78

NFL, 77

supply-chain function, 86

top-down initiative, 89

training data, 80

Chatbots, 33

Cloudification, 143

Clustering, 181

Cognitive procurement advisors (CPAs), 68

Competitive intelligence, 49

Convolutional neural networks
(CNNs), 108

Cooperative business, 3

Credit decisions, 33

Customer segmentation techniques, 19

Cybersecurity

assessments, 149

CISO, cyber defense plan

after a breach, 150–151

before a breach, 148–149

during a breach, 150

hybrid human-machine collaborative
approach, 144

supervised machine learning, 146

unsupervised machine

learning, 147

D

Data-driven bias, 24

Data-driven strategy, 22

Data intellectual property rights, 196

Decentralized AI

advantages, 204

benefits, 205

case, 201

Decentralized autonomous organizations
(DAOs), 186, 201–203

Decision making, 5

Decision tree, 101

Deep Blue, 42

Deep learning

architectures, 104

artificial neurons, 102

autoencoders, 108

backpropagation, 107

batch normalization, 107

biological neurons, 102

Boltzmann machines, 108

deep ANN, 104

dropout, 107

feedforward neural network, 106

filters and max-pooling, 108

GAN, 109

learning rate decay, 106

LSTM, 109

Deep learning (cont.)

- neural network implementations, 102
- object classification, 105
- vanishing gradients, 107
- weights, 104

Dependence risks, 57**Digital transformation, 175, 182, 185–186****Digital twins**

- business strategy, 163–164
- conceptual view, 162
- description, 162
- health and performance, machines, 163
- smart devices, 163

E**Economics**

- cities, 3
- cooperative business, 3
- cost of prediction, 5
- educational systems, 4
- energy, 3
- financial industry, 3
- healthcare, 4
- making predictions, 5
- natural resources, 2
- prediction problem, 4–6
- value of judgment, 7–9

Emergent bias, 25**Emotional quotient (EQ) skills**

- acknowledgement, 60
- baseline, 60
- reframe learning and knowledge management, 60

Ethical AI**issues**

- artificial stupidity, 210
- humanity, 209–210
- inequality, 209
- machine rights, 211
- security, 211
- singularity, 211
- unemployment, 208

roles

- boards, 212
- CEOs, 212–213
- technologists, 213

F**Facebook, 34****Feedback loop, 81****Forecasting, 180****Fraud detection, 33****Future-back-to-the-present approach, 61****G****Generative adversarial network (GAN), 109****Graphical User Interfaces (GUIs), 17****H****Healthcare, 4****Hofstadter's Law, 39****Human bias, 25****Human-machine collaborative ecosystem**

- contextualization, 228
- data sources and fast-paced technology evolution, 228
- HMIS (see Human-machine integrated strategy (HMIS))
- human-machine symbiosis, 216–218
- innovations, 216
- judgment skills, 228
- Licklider's augmentation, 218
- raw data, 227
- "self-contained" corporations, 216
- Thinking Fast and Slow, 219–220
- value creation, 216

Human-machine integrated strategy (HMIS)

- AI community, 221
- application scenarios, 222
- autonomous machine agents, 222
- essential ingredients, 222
- governance framework
 - efficiency and specificity, 224
 - human characteristics, 226
 - human-machine relationship, 226
 - laws of robotics, 223
 - people and technology, 226
 - safety, 224
 - segregation of responsibility, 224
 - trustworthiness and likability, 225
 - watch dogs, 224–225

- human cognition, 221–222
- intelligent machines, 221
- machine agents, 222
- machine agents interaction, 223
- map, 227
- neural network, 221

Human-machine symbiosis, 216–218

Hybrid cloud, 158

I, J

Image recognition technology, 68

Industrial Internet of Things (IIoT), 156

Industry 4.0, 161

Intelligence of things

- analytics value chain, 166
- architecture, 164
- industry-specific examples, 166
- cloud and AI
 - business model, 165
 - customer experience, 165
 - enabling technology, 165
 - product and services, 165
- practices
 - collaborate to partner, 168
 - conduct value-chain analysis and profitability analysis, 167
 - evaluate customer needs, 167
 - fast-evolving technologies, 168
 - fit-gap analysis, 168–169
 - roadmap, build, 169–170
 - value proposition, 167

Intelligent process automation (IPA)

- AI capabilities, 133
- assess opportunities and conduct proof of concepts, 138
- automation solutions, 132
- change-management programs, 137
- cognitive agents, 133
- enterprise functions, 130
- human loans processor, 133
- identify pilot scenarios, 135
- integrate processes and technology, 136
- machine learning, 133, 134
- operating procedures and governance models, 136
- organizations, 131, 139
- prioritize opportunities, 135

- roadmap, 135
- RPA, 132
- rules-based automation designs, 130
- smart workflows, 133, 134
- value-based strategy, 134

Internet of Things (IoT), 143, 192–193

- analytics platform components, 160
- Apple Watches, 157
- car, 157
- costly unplanned downtime, 160
- data value chain and
 - decision latency, 159
- electricity supply, 157
- improved product designs, 161
- M2M, 156
- making homes and buildings smart, 156
- operational efficiency, 161
- risk management, 161
- safety, 158
- sensors and connectivity, 155

Invisible interface (no-user interface), 17–19

IT operations

- AIOps (see AIOps)
- application and service environments, 186
- development activities, 173
- environments, 175
- production run, maintenance, and care activities, 173
- time and energy, 173

K

K-means clustering, 99

K-Nearest Neighbors (KNN), 99

L

Legal framework, 211

Licklider's augmentation, 218

Limited memory machines, 43

Linear regression, 100

Logistic regression, 101

Long short-term memory (LSTM)

- cells, 109
- forget gate, 109
- input gate, 109–110
- output gate, 110

M

- Machine learning (ML), 11, 23, 80, 144, 145, 184
- Machine-to-machine (M2M) communications, 156
- Markov Decision Process, 96
- Monetization, 201

N

- Naïve Bayes classifier, 98
- Narrow intelligence, 42
- Natural language generation (NLG), 111
- Natural-language processing (NLP), 35, 68, 183–184
 - continuous bag of words, 117
 - entity extraction, 115
 - lexicon normalization, 113
 - NLG, 111
 - NLU, 110
 - noise removal, 113
 - object standardization, 114
 - skip-gram model, 117
 - text preprocessing, 113
 - text to features, 114
- Natural language understanding (NLU), 110
- Natural resources, 2
- Neural network
 - back propagation, 118
 - black boxes
 - flight data recorders, 118
 - learning activities, 119
 - learning process, 120
 - neural net, 119
 - prediction systems, 119
 - self-learning machines, 118
 - tolerance for error, 121
 - training ML, 121
 - unmasking AI, 120
- Ninety-Ninety Rule, 38
- No Free Lunch (NFL), 77

O

- Overfitting, 24

P, Q

- Pareto Principle, 38
- Permissioned blockchain, 192
- Permission-less blockchains, 192
- Prediction, 179
- Privacy risks, 57
- Procurement function, 68
- Proof-of-stake, 192
- Proof-of-work, 191

R

- Random forest, 101
- Reinforcement learning, 96
- Replacement risks, 56
- Robotic process automation (RPA), 70, 125, 132
 - AI capabilities, 127
 - applications, 127
 - benefits, 126
 - customer on-boarding process, 126
 - ERP and CRM systems, 126
 - expectations, 130
 - faster turnaround, 129
 - lift and shift approach, 130
 - pre-defined format, 127
- Root cause analysis, 180

S

- Security risks, 57
- Self-aware machines, 43–44
- Sense-and-respond machines, 42
- Sequential processing, 41
- Service desk ticketing tools, 183
- Shared services functions, 70
- Similarity bias, 25
- Smart vehicles, 32
- Snapchat, 34
- Speech recognition, 68
- Strategic advantage
 - black box, 50
 - collision, 53

- cost, quality, and time, 50
- EQ skills, AI economy, 59
- execute conceptual and analytical operations, 48
- future-back goal, 49
- human-in-the-loop approach, 49
- human-level performance, 50
- immature AI
 - algorithms, 55
 - companies and governments, 58
 - dependence risks, 57
 - innovative organizations, 58
 - machine-prediction problems, 56
 - organizations, 56
 - prediction problems, 56
 - privacy risks, 57
 - replacement risks, 56
 - security risks, 57
 - step-change efficiencies to businesses, 58
- learning scenarios, 53–54
- reframing skills and continuous learning capabilities, 48
- transparent and conversational, 50
- use case (see Amazon flywheel)
- Supervised machine learning, 146
- Supply Chain Management (SCM), 68–70
- Support Vector Machine (SVM), 99

T

- Term Frequency-Inverse Document Frequency (TF-IDF), 117
- Theory of mind, 43
- Thinking Fast and Slow, 219–220
- Transformation program
 - action plans, 29
 - invest and develop AI capabilities, 29–30
 - sponsorship and governance, 29

U

- Ubiquitous intelligence, 12
- Underfitting, 24
- Unsupervised learning, 95, 147
- Use cases
 - chatbots, 33
 - consumer analytics and forecasting, 32
 - drones, 34–35
 - finance, 33
 - real estate, 34
 - smart vehicles, 32
 - social networking, 34
 - text analytics and NLP, 35–37
 - video games, 31
 - virtual personal assistants, 31

V, W, X, Y, Z

- Value-chain and profitability analysis, 167
- Virtual personal assistants (VPAs), 68
