

INDEX

A

- Adipose tissue-derived mesenchymal stem cells (ASCs)
 - bone regeneration 162
 - bone tissue engineering 162
 - materials 162–163
 - osteogenic differentiation
 - cell seeding 169
 - HA/ β -TCP 166–169
 - human primary osteoblast-like cells 165
 - rod-shaped hydroxyapatite nanoparticles 166
 - TNF- α 163–164
- Alamar Blue (AB) test 137–138
- ASCs. *See* Adipose tissue-derived mesenchymal stem cells (ASCs)

B

- Bicellular population
 - biomimetic 3D environments 1–2
 - cell-based therapy 1
 - EC maturation 5–6
 - EVCs derivation 3–5
 - human induced PSCs 1
 - materials 2–3
 - pericyte maturation 7–8
 - regenerating tissue and treating diseases 1
 - self-assembled vascular derivatives 2
 - vasculature 1
- Biomimetic scaffolds 166, 168, 169
- Biomimetic tissue-engineering 174
- Bone graft engineering, TMJ scaffold
 - autograft 57–58
 - bioreactor cultivation
 - assembly 58, 59, 67–68, 73–75
 - bone matrix deposition 76
 - cell culture 59, 60, 75–76
 - cellular density 76
 - component construction 68–70
 - design 65
 - 3D scaffold fabrication techniques 58
 - fluid modeling 68, 69
 - PDMS mold 65–67, 70
 - scaffold cell seeding and incubation 73
 - scaffold decellularization 59–60, 71
 - scaffold machining 71–72
 - scaffold preparation 63–65
 - bone blank preparation 70–71
 - bone segmentation
 - 3D reconstruction, CT 62–63

- materials required 61
- DNA extraction and quantitation 60, 61
- equipments 61
- G-code 77
- milling 62
- osteogenic genes 58
- software 62
- stock solutions 60
- Bone marrow-derived mesenchymal stem cells (BM-MSCs) 161

C

- Calcium phosphate (CaP) biomimetic coating
 - bioactive glass 111
 - biomineralization process 112
 - bone-like apatite 111, 112
 - FTIR 115–117
 - lysozyme 112
 - marrow stromal cells 112
 - natural-origin biomaterials 112
 - SBF (*see* Simulated body fluid (SBF))
 - scanning electron microscopy (SEM) 115, 116
 - TF-XRD 116–117
- Chemotactic response. *See* Perivascular stem cells (PVSC)

E

- Early vascular cells (EVCs) derivation 3–5
- Endothelial cells (EC) maturation 5–6
- Endothelial colony-forming cell-derived endothelial cells (ECFC-EC) 23
- Enzyme-linked immunosorbent assay (ELISA) 92–93

F

- Fibroblast growth factor (FGF) 95
- Fibrodysplasia ossificans progressiva (FOP) 149, 150
- Focal adhesion kinase (FAK) 81
- Fourier transformed infrared spectroscopy (FTIR) 115–117

H

- Heterotopic ossification (HO) 149, 150
- High-glucose Dulbecco's modified eagle medium 59
- High-throughput cell aggregate culture
 - cell pellet culture components 12
 - chondrogenesis 11
 - digestion of aggregates 15
 - DMMB assay 13, 15–16

High-throughput cell aggregate culture (<i>cont.</i>)	
mechanical stimulation	11
mimicking physicochemical cues	11
miscellaneous culture materials	13
oxygen tension	11
pellet formation	14–15
pellet handling analysis	12
seeding density	11
stem cell monolayer expansion components	12
thaw and expansion of hASCs	14
hPSCs. <i>See</i> Human pluripotent stem cells (hPSCs)	
Human basic fibroblast growth factor (bFGF)	60
Human induced PSCs (hiPSCs)	1
Human pluripotent stem cells (hPSCs)	174
bone-like tissue	174
decellularized bovine bone scaffolds	180
cell seeding	181
materials	177
preparation	180
density-volume, of the cell	183
materials	174–175
mesenchymal-progenitors	
cultivation and induction	175–176, 178–179
osteogenic potential	176–177, 179–180
surface antigen expression	176–177, 179
mesodermal lineages	173
MPs	174
MSCs	174
osteogenic marker	174
perfusion bioreactors	
materials	177, 178
method	181–182
Human primary osteoblast-like cells (HOBs)	165
I	
Immobilized metal affinity chromatography (IMAC) ...	98, 99, 101
M	
Mammary stem cells differentiation	
D920 cells	91
ECM compliance	
cell culture	81–84
cytoskeletal contractility manipulation	82, 87
gene expression, qRT-PCR	83, 89–91
immunofluorescence staining	82, 87–89
microscopy analysis	82
synthetic substrata preparation	82, 84–87
ELISA	92–93
FAK	81
keratin expression	80
lineage specification	80
matrix elasticity	80
MSC	80–81
myoepithelial cells	80
RhoA	81
sulfo-SANPAH	92
TDLU	80
Marrow stromal cells (MSCs)	112
MEM. <i>See</i> α -Minimal essential medium (MEM)	
Mesenchymal stem cell-like progenitors (MPs)	174
Mesenchymal stem cells (MSCs)	
biomimetic tissue-engineering	174
bone tissue engineering	174
osteogenic differentiation	112
synthetic matrix mimicking	80
Microfluidic device	
cell preparation	23–24
culture maintenance	26
heterotypic and homotypic cell interactions	22
hydrogel preparation	24–25
interstitial flow effect	22
loading device	25
PDMS device	22
perfused human capillary networks	22
pouring media	25–26
sealed device assembly	22–23
α -Minimal essential medium (MEM)	162
Molecular weight cut off (MWCO)	97, 99, 100
MPs. <i>See</i> Mesenchymal stem cell-like progenitors (MPs)	
MSCs. <i>See</i> Mesenchymal stem cells (MSCs)	
Multivalent ligands	
bioconjugation	
materials	97
method	99–100
hyaluronic acid (HyA) polymer	96
membrane-bound ligand and receptor pairs	95
multivalent ligand-receptor interaction	95–96
multivalent molecule characterization	100
multivalent Sonic hedgehog (Shh)	96
MWCO dialysis tubing	101
protein purification	
materials	97
method	99
recombinant protein production	
materials	96
method	98–99
MWCO. <i>See</i> Molecular weight cut off (MWCO)	
N	
Neural stem cells (NSCs)	
AB test	137–138
adult cadavers/aborted fetuses	131
BrdU assay	139–140
cell culture	133
cell lysate preparation	
materials	134

method 143–144

ECM 131, 132

embryonic and adult brain 131

IKVAV 132

immunocytochemistry

 materials 133–134

 method 141–142

iPSC 132

live-dead assay 138–139

neurite outgrowth 145–146

non-permissive environment 132

peptide amphiphiles (PA) 132

peptide nanofiber 136–137

proliferation tests 133

qRT-PCR

 materials 134

 method 143

RNA isolation

 materials 134

 method 142–143

scaffold effect 133

solid-phase peptide synthesis method 135–136

western blot

 materials 135

 method 144–145

Normal human lung fibroblasts (NHLF) 23

NSCs. *See* Neural stem cells (NSCs)

O

Osteoblasts 171

Osteogenic differentiation

 ASCs

 cell seeding 169

 HA/ β -TCP 166–169

 human primary osteoblast-like cells 165

 rod-shaped hydroxyapatite nanoparticles 166

 TNF- α 163–164

 MSCs 112

P

Perivascular stem cells (PVSC)

 bioactive factor 103

 chemoattractants 106

 chemotaxis chamber

 disassembly 107

 preparation 106

extracellular matrix (ECM) 103

 filter fixation and analysis 107–108

 filter preparation 104–105

 materials 104, 105

 peptides 103

 responding cells 106

Polydimethylsiloxane (PDMS) 22

 Prepare polydimethylsiloxane (PDMS) 65–67, 70

R

RNA interference (RNAi)

 alkaline phosphatase activity 152–153

 cell culture supplies 152

 disease-causing gene 149

 gel electrophoresis

 materials 152

 siRNA complexation and validation 153–154

 HO and FOP treatments 149, 150

 instruments 151–152

 mineralization studies 153

 osteoblastic differentiation

 alkaline phosphatase activity 155–156

 mineralization staining 156–157

 target and reference genes 155

 osteoblast lineage progression 150

 siRNA delivery protocol 154

S

Scanning electron microscopy (SEM) 115, 116

Simulated body fluid (SBF)

 ionic concentrations 114–115

 1x solution preparation 113

 1.5x solution preparation 113, 114

Sulfated-glycosaminoglycans (s-GAG) 12

T

Temporomandibular joint (TMJ) condyle, bone graft engineering. *See* Bone graft engineering, TMJ scaffold

Terminal ductal lobular unit (TDLU) 80

Thin-film X-ray diffraction (TF-XRD) 116–117

Tumor necrosis factor-alpha (TNF- α) 163, 164

V

Vascular endothelial growth factor (VEGF) 95
