

INDEX

A

- Adaptor
 - 454 adaptor A..... 117
 - swinging bucket rotor..... 131
 - tagging, *in vitro* transposition (*see* NGS library preparation, *in vitro* transposition)
- Alignment
 - bisulfite-converted reads
 - premethylated adapters..... 234
 - unmethylated adapters..... 237
 - BLAST (*see* Basic local alignment search tool)
 - DGE
 - reads..... 47
 - score..... 45
- Amplicon
 - cpn60* (*see* Chaperonin-60)
 - G-C content..... 165
 - gel electrophoresis, multiplex..... 275
 - pyrosequencing, tag-encoded (*see* Tag-encoded FLX-amplicon pyrosequencing)
- Amplification
 - cpn60* primers..... 147, 157
 - library preparation (*see* Amplification-free library preparation)
 - multiple-displacement amplification (MDA)..... 204
 - multiple target 270, 274
 - PCR
 - bisulfite treated DNA..... 229, 235
 - library, premethylated adapter..... 228, 233
 - thermal cycler conditions..... 165
 - UV light..... 164
 - single tube emulsions..... 153
 - target-enrichment, NGS (*see* Target-enrichment)
- Amplification bias
 - DNA sections..... 258
 - removal..... 200
 - WGA..... 30–31
- Amplification-free library preparation
 - annealing sites..... 260
 - custom adapters..... 258
 - equipments..... 261
 - ligated fragments..... 257–258

- materials 260
- methods
 - end-repair and A-tailing..... 262–263
 - fragmentation 261–262
 - ligation..... 263–264
 - qPCR quantification..... 264–265
 - size selection 264
 - timing 265
- NGS..... 257
- no-PCR method..... 258, 259
- PCR..... 258
- quantification, materials 260–261
- TaqMan-based quantitative PCR assay..... 259

B

- Bacteria
 - banding patterns 160
 - contamination..... 140
