

INDEX

A

- Acceptor sensitized emission 139, 140
 Acridone 24, 48, 50
 Acrylamide 120, 129, 131, 132, 188
 Action potential assay 243, 248–249
 Activation energy 378, 380
 AFM. *See* Atomic force microscopy (AFM)
 AlexaFluor-488 219, 221
 Allosteric
 coupling 167–168, 183, 190
 free energy 166–168, 183, 190
 Allostery 165–190
 2-aminopurine 73, 75–77
 Amphotericin B 57–64
 Anaerobic, titrations 175
 Angiosperm greening 231–238
 Antidigoxigenin 336
 Apparent FRET efficiencies 143, 156
 Arrhenius equation 378
 Assembling bead 341–342, 350–351
 Atomic force microscopy (AFM) 212, 221–223,
 298–301, 305–307, 336
 ATP
 binding 94, 328
 hydrolysis 90–93, 96, 98, 145
 ATPase 87, 90, 330–331
 Autocorrelation 318–320, 322, 325, 326, 331, 370
 Autoxidation 378, 380, 383–385
 Average Förster distance 150, 158, 161
- ## B
- Binding constant
 overall 116, 122, 126
 partial 116
 Binding site 81, 93, 100, 117,
 132, 175, 178, 179, 181, 188, 197, 207, 272
 Biosensors 193–214
 Biotin 74, 277, 279, 283, 290,
 291, 336, 337, 341, 351, 352, 355
 Biotinylation 277, 282–283
 Bismuth 192
- ## C
- CadC 168, 175, 183–185, 189
 Cadmium 191
- Cantilevers 221, 298, 300–301, 305–307
 Cardiac muscle 313, 314, 323, 324
 Celiac disease 204
 Channelrhodopsin 2 (ChR2) 241, 242, 244,
 246, 248
 Chebyshev transform 11
 Chemical
 kinetics 375, 378–380
 relaxation 358, 362, 367
 Chl biosynthesis. *See* Chlorophyll (Chl) biosynthesis
 Chlide. *See* Chlorophyllide (Chlide)
 Chlide photoreduction 232, 236–238
 Chlorophyll (Chl) biosynthesis 232
 Chlorophyllide (Chlide) 231–233, 236–238
 ChR2. *See* Channelrhodopsin 2 (ChR2)
 Cobalt 81–83
 Coefficient matrix 109, 111, 114, 127
 Conformation 39, 69, 73, 78,
 79, 83, 131, 136, 137, 144, 166, 195, 207,
 272, 274, 275, 286, 288, 289, 293, 297,
 312, 323, 328, 358, 359, 362, 366,
 368–370, 376
 Correlation function 318–319, 321–327,
 329, 330
 Cotyledon 232
 Coupling free energy 166, 183, 190
 Cross-bridge 311–332
 Cryoprotectant 378
 Cryoreduced intermediates 386
 Cryosolvents 376, 377, 384, 387
 Cryospectroscopy 375–387
 Cysteine 145–147, 149, 150,
 152, 160, 172, 175, 183, 200, 283, 294, 300
 Cytochrome P450 379, 382, 383
- ## D
- Dark-grown plants 231
 Deconvolution 367, 376
 Deetiolation 232, 236–238
 Degree of labeling 140, 141, 152,
 153, 314, 316
 Diffusion spFRET 278, 286–289, 293
 Digoxigenin 336
 Dimethyl sulfoxide 243, 377
 Directional energy transfer 44
 Directionality 85, 89

Disodiumfluorescein219
 DNA
 protein complexes118
 replication131
 unwinding kinetics 85–102
 Donor quenching.....142
 Donor-acceptor pair..... 27, 28, 30,
 32, 39, 47, 49, 136–138, 143, 144, 146,
 147, 150, 152, 156, 160, 161, 197, 273
 Duty ratio 322, 326–330
 Dye 15, 19, 23, 31, 32,
 74, 87, 89, 152, 197, 198, 200–203, 219,
 222, 243, 248–251, 254, 260, 273, 282–284,
 287, 290, 294, 314, 317, 378

E

E-beam lithography 336, 338, 344–345
E. coli
 DnaB helicase 117, 120–123
 DnaC protein131
 Eigenvalues109–111, 113, 114, 127
 Elasticity..... 307, 344, 351–353
 Electric
 birefringence..... 361–362, 370–371
 dichroism 359–362, 365–368, 370–372
 field jump..... 371, 372
 field pulses 358–362, 365, 367,
 369, 371, 372
 Electro-optical effects360
 Electro-optics3, 286, 357–372
 Electrostatic interactions357
 Emission spectra..... 15–17, 44, 46,
 58–60, 62, 64, 153, 154, 156, 157, 198, 205,
 206, 213, 222–224, 226, 234, 265, 266
 Enhanced local field211, 218
 EPIMs. *See* Etioplasts (EPIMs)
 EPR..... 376, 381, 383, 384
 Ethidium.....371
 Etiolation 232, 236–238
 Etioplasts (EPIMs).....213, 232, 234
 Excitation spectra 44, 64, 248

F

Fluorescein 8, 74, 87, 90, 147,
 148, 152–154, 156–161, 169, 182, 201–205,
 219, 222–224
 Fluorescence
 anisotropy
 fundamental.....113, 143
 limiting..... 143
 correlation spectroscopy (FCS)..... 196, 209–210
 decay 3, 39, 46, 78, 79, 236, 237
 immunoassay 196, 218

intensity 4, 5, 10–13, 16, 19, 29, 30,
 38, 39, 75–78, 91, 105–132, 136, 139,
 198–201, 203, 205, 222, 226, 236, 267,
 273, 291–294, 318, 319, 324, 325, 328
 lifetime1–3, 7, 8, 10, 13, 15, 19,
 28, 30, 39, 46, 61–63, 123, 129, 218,
 231–238, 266–268, 316
 lifetime imaging (FLI) 1–20, 267
 lifetime imaging microscopy (FLIM)1, 2,
 10, 12, 13, 16, 61, 63, 264–267
 melting.....75
 microscope.....250
 quantum yield 8, 25, 29, 30, 38, 39,
 46, 47, 169
 quenching 7, 106, 116, 129–132,
 153, 198
 resonance energy transfer (FRET)..... 91, 135, 175
 spectrum15, 16, 19, 46, 47, 236
 stopped-flow method.....106, 125
 Fluorescent nucleotide analogs117, 120
 Fluorophores 1–3, 5, 7, 8, 10,
 13, 15, 17, 19, 24, 28, 30–32, 34, 39,
 42–45, 73–76, 86–92, 99, 100, 120, 123,
 129, 169, 175, 181, 182, 194, 195, 197,
 209, 211, 213, 218, 222, 237, 273, 274,
 278, 290, 313, 315–318, 324, 325
 Force-generating step312
 Förster critical distance 137, 146, 157
 Franck–Condon energy28
 Frequency domain 1–6, 8, 14, 15, 19, 306
 FRET-based sensors..... 197–202

G

Gamma function97
 Gliadin 196, 204–214
 Gold 300, 301, 305, 308, 335–355
 Greening..... 231–238

H

Hairpin dynamics 67–70, 72, 75,
 77–79, 82
 Hearth hypertrophy311
 Helicase
 dsDNA unwinding..... 91, 92, 145
 hexameric..... 145–148, 154–158
 oligomeric..... 154
 translocation 85, 86, 88, 91, 92
 Heme-oxygen intermediates 375–387
 Hemoprotein.....385
 Heparin 87–90, 92, 93, 98, 99
 HIV-1283, 294
