

INDEX

A

- Alzheimer's disease 242
 Amit, M. 81
 Arai, K.Y. 131

B

- Basement membrane extract (BME) 74
 Basic fibroblast growth factor (bFGF) 74
 Bovine serum albumin (BSA) 83
 Brawn, L. 4
 Brennan, K.J. 242

C

- Cardiomyocytes. *See* Human induced pluripotent stem cells (hiPSC)
 CELLstart™ 83–84
 Chemically defined medium (CDM) 150
 Chinese hamster ovary (CHO) 133
 Chromatin immunoprecipitation (ChIP)
 ChIP qPCR 211
 ChIP sequencing 211–213
 protein A/G Dynabeads 208–209
 Chronic myeloid leukemia (CML) 164
 Cibelli, J.B. 5
 Cloning technologies
 multiple primers 255
 Multisite Gateway
 BP reaction 258–259
 LR reaction 259–260
 primer design 258
 reagents 254–256
 TOPO® TA
 primer design 256
 reaction 256–257
 transformation 257–258
 vector backbones 256
 Cote, R.J. 112

D

- Derda, R. 87
 Dulbecco's phosphate buffered saline (D-PBS) 94

E

- Edwards, R.G. 4
 Electroporation 263
 Embryoid bodies (EB) 116
 Embryonic stem cells (ESCs) 73
 human (*see* Human embryonic stem cells (hESCs))
 mouse (*see* Mouse embryonic stem cells (mESCs))
 Engelbreth-Holm-Swarm (EHS) tumor
 basement membrane extract 74
 bFGF 75
 hESC 75
 iPSCs 76
 laminin 76
 MEF-conditioned media 74
 Episomal vectors, hESCs
 dishes, preparation of
 Geltrex-coated dishes 265
 MEF dishes 265–266
 drug selection and stable modified ESC 269–270
 electroporation 263
 Hygromycin resistance cassette 264
 methods
 DNA, transfection 267
 harvesting cells, transfection 267–268
 human ESC culture, transfection 266
 Neon system 268–269
 reagents and medium
 ESC media 264
 MEF conditioned medium 265
 MEF media 264
 Epithelial-mesenchymal transition (EMT) 85
 Evans, M.J. 35
 Extracellular matrix (ECM) 80

F

- Feeder-free culture
 animal-derived
 EHS tumor 74–76
 type I collagen 76, 80
 ESCs 73

Feeder-free culture (*cont.*)

human-derived extracellular matrix proteins
 CELLstart™ 83–84

I

Induced pluripotent stem cells (iPSCs) 73

- adenovirus 25
- anti-SeV antibodies 53–54
- basic FGF stock solution 47
- blood cells, reprogramming of 52–53
- cell culture 194–195
- cells and vectors 46
- collagenase IV solution 49
- colonies, identification of 65–67
- complete fibroblast medium 47
- DataAssist 3.0 Software 200–201
- detection reagents 59
- episomal vectors
 - PCR 68–70
 - picking and characterization 67–68
- equipment 47, 59–60
- feeder free iPSC medium 48
- fibroblast reprogramming 63–64
 - replate cells 50–52
 - transduction human fibroblasts 49–50
- gelatin-coating culture vessels 49
- geltrex™ matrix-coated dishes 49
- GeneAssist™ Pathway Atlas tool 198, 199
- generation of
 - colony formation 41
 - fibroblast plating 40
 - growth in hFib medium 40–41
 - infecting fibroblasts 40
 - matrigel plate preparation and colony picking 41–42
 - mEFs 41
- human iPSC medium 48
- identification and characterization 194
- media components and reagents
 - CD34+ Cells 47
 - feeder free reagents 46–47
 - fibroblasts 46
- media preparation
 - bFGF Solution 60
 - EDTA, DPBS 62
 - essential 8™ medium 61
 - fibroblast medium 60
 - N2B27 medium 61
 - supplemented fibroblast medium 60–61
 - vitronectin 62–63
- murine fibroblasts, reprogramming of 23–24
- non-viral reprogramming methods
 - episomal plasmids 27
 - minicircle vectors 27
 - miRNA infection/transfection 26
 - mRNA transfection 26
 - PiggyBac 26

- oocyte reprogramming 28
- OpenArray® System 192
 - case preparation 196
 - loading 197
 - sample plate preparation 195–196
- PCR parameters 70–71
- PCR reagents 47
- plate 195, 196
- protein 25
- qPCR 193–194
- reagents 58–59
- recalcitrant cells 28–29
- reprogramming methods, classification of 30
- reverse transcription
 - materials 193
 - methods 194–195
- RNA isolation
 - materials 193
 - methods 194
- Sendai virus 25, 46
- SeV genome and transgenes 54–55
- single cassette reprogramming vector 24–25
- somatic cells 194
- StemPro™-34 medium 48
- TaqMan® OpenArray® human stem cell panel 195
- thermal cycler protocol and imaging 198, 199
- transcription factors 191
- transfection 64–65
- transgene-free iPSC lines
 - (*See* Transgene-free iPSC lines)
- vector-free iPSCs 53
- workflow 60
- Inner cell mass (ICM) 3, 17–18
- In vitro fertilization (IVF) 4

J

- Jones, M.B. 76
- Jump-In™ TI™ technology. *See* Human embryonic stem cells (hESCs)

K

- Knockout serum replacement (KSR) 94, 274
- Knowles, B.B. 6
- Koji, Y. 131

L

- Labeled stem cells
 - disease models
 - Alzheimer's disease 242
 - GFP positive cells 243
 - hES cell lines 242
 - hiPS cell lines 242
