

Authors

Stamatiki AGOTI received her MSc in Economics with the title “Applied Microeconomics and Marketing” in 2006 from the University of Patras. Currently, she is working in Patras Science Park, department of Project Planning and Implementation. Among her responsibilities is also the management of GSRT projects.

Dario ANTONELLI Italy 1966, holds a MSc degree in Mechanical Engineering from the Politecnico di Torino (1990). He worked at Fiat Research Center until 1992. He is currently Associate Professor at the Department of Production Systems and Economics of Politecnico di Torino, and he is enrolled in the Faculty of Management and Industrial Engineering. His scientific activity is mainly related to numeric finite element simulation of metal working processes, to experimental identification of process parameters and to supply chain management. He is presently responsible for the research project on micro-assembly under the Italian Ministry grant.

Miryam BARAD was Head of the Industrial Engineering Department at Tel Aviv University and held academic visiting positions at universities around the world.

Her research and professional interests focus on various aspects of quality and flexibility. Prof. Barad is on the Editorial Board of the *International Journal of Production Research*, a Council member of the International Foundation of Production Research and a member of the New York Academy of Sciences.

Xavier BOUCHER is currently Associate Professor in Industrial Management at the École Nationale Supérieure des Mines de Saint Étienne (France). His current research focuses on virtual organizations, agile logistic systems and decision models to manage the supply chain agility. His previous research works on integration of socio-technical systems led him to publish in several journals like: *International Journal of Computer Integrated Systems*, *Computers in Industry*, *Production Planning and Control*, *Robotics and Computer Integrated Manufacturing*, and *Concurrent Engineering*.

PJ BYRNE is a Lecturer of Operations/Supply Chain Management in Dublin City University Business School, having formerly worked as a Senior Research Fellow at the University of Limerick. He received a PhD from the Manufacturing and Operations Engineering Department at the University of Limerick, in the area of supply chain simulation. His research interests are supply chain design, analysis and optimization, environmental impacts of supply chain construction, company outsourcing, decision-making and costing, and industrial simulation applications.

Brunella CAROLEO was born April 14, 1981. She graduated in Mathematical Engineering at Politecnico di Torino in 2004. In 2007 she concluded her PhD in Industrial Production System Engineering, presenting a thesis on collaboration in complex industrial networks. Now she is working in the Technology to Business Intelligence unit of Istituto Superiore Mario Boella on the theme of information and communication technology diffusion.

Alexandre DOLGUI is Full Professor, Director of the Centre for Industrial Engineering and Computer Science at the École des Mines de Saint-Étienne (France). Faculty Member at the State University of Informatics and Radioelectronics, Belarus (1986–1994) and at the University of Technology of Troyes, France (1995–2003). He has held visiting appointments at the INRIA-Lorraine, project SAGEP, France (from 1992 to 1993 and from 1994 to 1995) and at the Queen's School of Business, Kingston, Canada (in 2005). Research issues on manufacturing line design, production planning, and supply chain optimization. Member of the Board of IFPR, and of IFAC Technical Committees 5.1 and 5.2, Associate Editor or an Editorial Board Member of nine international journals.

Peter P. GROUMPOS received his PhD in 1978 from the State University of New York at Buffalo. He is the President and CEO of the Patras Science Park. Currently he is Professor in the Division of Systems and Control and Director of the Laboratory for Automation and Robotics (LAR-UoP). His main research interests are intelligent manufacturing systems, supervisory hybrid control, soft computing control methods, simulation and application of informatics in a number of areas. He has published over 180 journal and conference papers, book chapters and technical reports.

Geza HAIDEGGER, PhD, Eur-Eng, graduated from the Technical University of Budapest in 1978, and began to work at the Hungarian Academy of Sciences, Computer and Automation Institute. He got his PhD in 2002. He has been in charge of the design of industrial control systems, robots, etc. Member of several scientific societies, author/co-author in more than 150 publications. Project leader of several Hungarian and joint European projects.

Cathal HEAVEY is a Senior Lecturer in the Manufacturing and Operations Engineering Department in the College of Engineering at the University of Limerick. He lectures in the areas of operations research, information technology, sup-

ply chain modelling and discrete event simulation. He is Joint Director of the Enterprise Research Centre. His research interests include: simulation modelling of discrete event systems, modelling and analysis of supply chains and manufacturing systems and enterprise modelling, where he has specialized in the area of modelling and optimization of manufacturing and supply chain systems using both analytical and simulation techniques.

Jean-Claude HENNET is a Research Director of the French Research Center (CNRS). He is the head of the research team on Discrete Event Systems and Manufacturing Systems of LSIS in Marseilles, France. He is the author of more than 100 articles in scientific journals and international conferences. His research interests are in the fields of systems theory, optimization, game theory, control under constraints, discrete event decision systems and manufacturing systems.

George L. KOVACS has been a Professor at the Technical University of Budapest since 1995. In 1997 he received the Doctor of the Academy degree from the Hungarian Academy of Sciences (HAS). He has been with the Computer and Automation Research Institute of HAS since 1966, recently head of the CIM Research Laboratory. Author of more than 300 publications, he is a member of several Hungarian and international scientific organizations.

Paul LISTON is a Postdoctoral Researcher at the Enterprise Research Centre at the University of Limerick. He received a PhD, in the area of decision support for contract costing, from the Manufacturing and Operations Engineering Department at the University of Limerick. His research interests include web-based discrete event simulation, supply chain design and analysis, environmental impact performance metrics, decision support and knowledge management systems, non-hierarchical networks, and outsourced services modelling.

Vittorio MARCHIS is a Full Professor of Theoretical and Applied Mechanics (1990) at the Politecnico of Turin, and the Director of the Historical Documentation Centre and Museum of the Politecnico of Turin. Presently he is a Full Professor of History of Technology at the Politecnico di Torino. He organized several scientific conferences and symposia, and he directed many historical exhibitions.

Nicola PASQUINO is a Researcher at the University of Salerno. His current research focuses on production systems.

Thomas POTINECKE studied Mechanical Engineering at the University of Stuttgart. He is a business engineer at the Fraunhofer Institute for Industrial Engineering (IAO) in Stuttgart. He has been working as a scientific researcher in the Competence Centre Innovation Management since 2000. He has gathered expertise in assessment topics concerning virtual engineering, digital manufacturing, process management as well as innovation and networking processes.

Thorsten ROGOWSKI is a business engineer at the Institute of Technology Management (IAT) of the University of Stuttgart. He has worked as a scientific researcher in the Competence Centre Innovation Management since 2002. He has gathered expertise in assessment topics concerning innovation and networking processes as well as the innovation capability of companies. He has coordinated the Collaborative Research Center 374 (Sfb 374) “Development and Assessment of Innovative Products”.

Marta SALVADOR received a MSc in Communication Studies at University of Bologna in 2000, and specialized in Communication of Science at the International School for Advanced Studies (SISSA-ISAS) in Trieste in 2003. Knowledge Manager and Communication Expert at EIDON S.p. a. from 2000 to 2008, she has been working on software development and multimedia design of e-learning applications, RTD and innovation project management, as well as in science communication activities. In the field of EU-funded RTD projects, her professional interests are mainly focused on coordination, dissemination and training initiatives.

Stefano SALVADOR received a MSc degree in Contemporary Philosophy at Ca' Foscari University of Venice in 2004; after that he worked in the ICT Sector in Italy and Germany. At the Academia-Industry Interaction Responsible at EIDON S.p. a. from 2006 to 2008, he has also carried out research work for the University of Trieste. Member of the Scientific Committee of the Marie Curie supported CREATE project and coordinator of the first CREATE Training Course, he is currently working in the HR field. Among his professional interests are innovative organizational practices and knowledge management.

Chrysostomos STYLIOS holds a Diploma in Electrical Engineering from the Aristotle University of Thessaloniki (1992) and a PhD degree from University of Patras, Greece (1999). He is a consultant at Patras Science Park and an Assistant Professor at the Department of Informatics and Telecommunication Technology, TEI of Epirus and Director of Knowledge and Intelligent Computing Laboratory. His research interests include soft computing, computational intelligence, modeling complex systems, intelligent systems, decision support systems and artificial intelligence techniques for medical applications.

Teresa TAURINO obtained a Master's degree in Mathematical Engineering at Politecnico di Torino in 2005. Since May 2006 she has collaborated with the European Coordination Action CODESNET (Collaborative DEMand and Supply NETWORKS). Since January 2007 she has been a PhD student in Production Systems Engineering at Politecnico di Torino, Department of Production Systems and Business Economics. Her main research topic is the development of mathematical tools for modelling and analysis of industrial networks performance.

Agostino VILLA is Full Professor of Performance Analysis of Industrial Production Systems, and of Production Planning and Control since 1990 at Politec-

nico di Torino, Chairman of the Committee for University Performance Evaluation. His research area is in modelling large-scale distributed industrial systems, designing production planning and control architectures, methods and tools for managing industrial innovation processes. Past President and Fellow of the International Foundation for Production Research (IFPR), he is founder and member of the IFAC TC MIM, the IFIP WG 5.7. Regional editor of *Robotics and Computer Integrated Manufacturing* (Elsevier), and member of the Editorial Committees of some other international journals. Coordinator of the CODESNET Project.
