

Index

A

Arch tensegrity, 4, 5, 163
Art, 4, 5
Axially prestressed structures, 172

B

Biological application
 cytoskeletal mechanics, 193, 194
 nucleated cell, 194
 red blood cell, 201
 triangular icosahedron tensegrity, 198
Biology, 3, 4

C

Cell mechanic, 193
Class I tensegrity
 material, 10
 rhombicuboctahedron, 14, 16
 skew hexagonal cylindrical, 16, 20
 triangular icosahedron tensegrity, 10–14
 truncated tetrahedron, 14
Computational cost and speed, 3
Computational tensegrity, 2, 3
Conic tensegrity, 155–158
Constant matrix, 24
Coordinate transformation and assembling
 processes, tensegrity member,
 179–182
Cylindrical tensegrity
 enumeration of 3-9 plex, 145–146
 MATLAB code, N-plexCylindricalTensegrityGenerator.m., 144–147
 shifting/rotation angle, 142

 struts and braces, 143
 tension coefficients, 144
Cytoskeleton, 4, 193, 194

D

Deficient rank matrix, 31
Degree of freedom (DOF), 8
Deoxyribonucleic acid (DNA), 204
Design
 real eight-nodes irregular tensegrity
 structure
 loadings and stress/stability response
 evaluation, 138, 139
 numerical form-finding process
 algorithm, 135–136
 sizing of members, 136
 structural analysis, 138
Discrete Fourier transform
 (DFT), 172
Dynamic shape functions, 171
Dynamic stiffness method (DSM), 171

E

Eigenvalues decomposition (EVD)
 linear algebra, 31
 program listing, various transformation
 matrices, 35, 37
 singular values, 32
 singular vectors, 32
 square matrix, 33
 transformation matrix, 33, 34, 36
Eight-node irregular tensegrity structure, 121,
 124, 125

Enumeration ten-plex cylindrical tensegrity, 202–204

Equilibrium matrix

decomposition, 59, 64

FDM, 55

FGM, 51

physical interpretation of SVD, 44, 45

SEM, 186

structural system, 43, 48–51

SVD, 70, 108

F

Finite element method (FEM)

assembling process, 8

discretization, 7

eight-node tensegrity object, 138

elements, assembled, 7

harp, 7

idealization of physical system, 6

First order linear equation

constant matrix, 24

zero determinant of matrix, 24–26

Floating point operations per second (FLOPS), 2

Force density method (FDM)

cables network problems, 46

connectivity matrix, 47

equilibrium matrix, structural system, 48, 49, 52, 59

equilibriums at a node, 46, 47

tensegrity structure, 46

tension coefficients, 85, 95

Form-finding

cable connections chart, 142

flowchart, 70, 71

GA (*see* Genetic algorithm (GA))

irregular tensegrity, MATLAB code, 122–134

iteration process, 106

stochastic procedure and numerical optimization algorithm, 105

structural configurations, self-stresses, 105

T-cone tensegrity, 82–92

triangular icosahedron tensegrity, 96–102

triplex tensegrity, 72–79

Free vibration

axially prestressed triplex tensegrity, 185–186

equation of motion, 173, 174

uniform prestressed cable, 182–183

Frequency domain, 172, 175, 177

Full rank matrix, 30

G

Generalized stress, 49

Genetic algorithm (GA)

connectivity matrix, 117

crossover, 109, 113

eliteness, 109

fitness functions, 109, 114

form-finding

connectivity matrices and prototype

force density vector, 117

encoding scheme, 118, 119

fitness and penalty functions, 118, 120, 121

irregular tensegrity structure, 117

global minimum value, polynomial

function, 111

MATLAB code, maximum value of

polynomial function, 114–116

mutation, 109, 113

numerical optimization algorithm, 108

pairing of parents, 112

polynomial function, minimum values, 110

population, 112

H

Homogeneous matrix, 24

Horizontal matrix equations, 29

Hybrid tensegrity bridge, 5

I

Inconsistent matrix equations, 25, 27, 29, 31

Indefinite matrix equations, 26, 30

Indefinite rectangle matrix, 29

Initial tangent stiffness matrix, 72

Irregular tensegrity structure, 117

L

Layered N-plex cylindrical tensegrity, 160, 161

Least squares solution, 37

Local coordinate system, 179

M

Mathematical modeling

FEM (*see* Finite element method (FEM))

harp, FEM, 7

physical system, 6

Mechanical engineering, 5

Million instructions per second (MIPS), 2

N

- N-polygon cylindrical tensegrity, 141
- Nucleated cell, 194–198
- Null-space matrix, 72, 78, 88, 99
- Null-space vector, 30, 33
- Numerical form-finding method
 - approximation of force densities, 108
 - approximation of nodal coordinates, 107
 - force density prototype, 106
- Numerical technique
 - eight-node irregular tensegrity structure, 121, 124, 125
 - MATLAB code, irregular tensegrity, 122–134
 - six-node irregular tensegrity structure, 121–123
 - ten-node irregular tensegrity structure, 122, 126–128

P

- Paraboloid tensegrity, 158, 159
- Probability-based mutation, 121
- Pseudoinverse, 37, 39

R

- Rank
 - conditions, 69, 70, 108
 - deficiency, 78, 88, 98, 107, 120
 - deficient rank matrix, 31, 56, 59, 64
 - full rank matrix, 30
- Rectangular matrix
 - horizontal, 28, 29
 - vertical, 27, 28
- Red blood cell, 201
- Rhombicuboctahedron tensegrity, 14, 16
- Rule of connection, 7

S

- Self-stressing, 1
- Singular value decomposition (SVD)
 - characteristics of matrices, 37
 - inverse matrix, 38, 39
 - InverseOfRectangularMatrices.m, 40
 - physical interpretation, equilibrium matrix, 44, 45
 - pseudoinverse, 37
 - vertical matrix, 38
- Singular values, 32, 37, 50
- Singular vectors, 32, 37, 44

- Six-node irregular tensegrity structure, 121–123
 - Skew hexagonal cylindrical tensegrity, 16, 20
 - Skylon, 4
 - Spectral analysis method (SAM), 171
 - Spectral element matrix, 179, 180
 - Spectral element method (SEM), 172
 - Spectral element modeling
 - dynamic shape function, 175, 176
 - governing equations, frequency domain, 174
 - spectral element equation, 177–179
 - spectral nodal DOFs, forces and moments, 175
 - weak form, governing equation, 177
 - Sphere geometry, 141
 - Spiral tensegrity, 166–169
 - Stacked cylindrical tensegrity, 158–162
 - Structural analysis, 43, 138
 - Structural system
 - Class I, 52–55
 - Class II, 55–59
 - Class III, 59–63
 - Class IV, 63–67
 - classification, 43, 44
 - configuration, 43
 - equilibrium concept, 49–51
 - equilibrium matrix, 48, 49
 - Struts and cables, 8
- T**
- Ten-node irregular tensegrity structure, 122, 126–128
 - Tensegrity
 - art and architecture, 4
 - classification, 8, 9
 - definition, 1
 - initial stiffness, 70, 72
 - mechanical engineering, 5
 - nature and biology, 3, 4
 - rank condition and nullity, 69, 70
 - struts and cables, 9
 - 3D geometric transformation, 162, 163
 - Triangular icosahedron tensegrity, 10–14, 198–199
 - Cartesian coordinate axes, 92
 - Cartesian coordinates of nodes, 96
 - coordinate system, 93
 - form finding conditions, 96, 98–100
 - Lagrange multiplier, 94
 - MATLAB code, form finding, 99–102
 - tension coefficient, calculations, 95

Triplex

- Cartesian coordinates of nodes, 75
- creation, triangular prism, 72
- form finding conditions, 77–79
- MATLAB code, form finding, 79, 81
- nodal coordinates, 72, 74, 75
- polar coordinates of nodes, 73
- symmetrical constraints, 74
- tension coefficients, calculations, 76, 77

Truncated cone (T-cone) tensegrity

- Cartesian coordinates of nodes, 85
- connectivity configurations, 150, 151
- constrained optimization problem, 83
- creation, square cone, 82
- enumeration of 3-9 plex, 151
- form finding conditions, 87–89
- MATLAB code, form finding, 90, 92
- nodal coordinates, 148, 151
- N-plexTconeTensegrityGenerator program
 - list, 153–154
- polar coordinates of nodes, 83

- shifting/rotation angle, 149

- struts and braces, 148

- tension coefficient, calculations, 85

- tension coefficients, 85, 86, 150

- Truncated tetrahedron tensegrity, 14

V

- Vertical matrix equation, 27, 28

- Vibration modes, 171

W**Workshop**

- material, 10

- rhombicuboctahedron tensegrity, 14, 16

- skew hexagonal cylindrical tensegrity, 16, 20

- triangular icosahedron tensegrity, 10–14

- truncated tetrahedron tensegrity, 14
