

Index

A

Adonixanthin, 12
Advanced glycation end products (AGEs), 41
Aeration, 143, 163
Age-related macular degeneration (AMD), 40
Alternative oxidase (AO), 50
Arthrospira platensis/Spirulina platensis, 170
Artificial neural network (ANN), 43, 111
Astaxanthin, 9, 11–13, 39, 48–51, 116
Attenuated total reflection (ATR), 114

B

Biocrude, 21
Biodiesel, 9, 16, 21, 60, 116
Biofuels, 1, 16, 21, 59, 81, 91, 115
Biomass, 4, 91
composition, 91, 109, 123
concentration, 105, 119, 160
Bioreactors, membrane-aerated, 166
Bioremediation, 1, 9, 13, 14
BIOS-3, 145
Biosynthesis, 37
Bleomycin, 22
Bubble-free membrane aeration, 143, 163, 170

C

Calvin–Benson cycle, 2
Canthaxanthin, 11
Capacitance, 118–120
Carbon dioxide, biomitigation, 1, 13, 59, 100, 163, 168
liquid/gaseous phases, 100
transfer rate (CTR), 165
Carbonic anhydrase, 162
Cardinal temperature model with inflection (CTMI), 70
Carotenes, 10, 11, 42, 49, 51, 116, 153
Carotenogenesis, 37

oxidative stress, 51
regulation, 49
Carotenoids, 1, 10, 37, 51, 119, 123, 147, 149, 153, 156
Cells, count, 106, 120
morphology, 106, 120
Channelrhodopsins, 155
Chemostat culture, 75
Chlamydomonas reinhardtii, 12, 42, 49, 51, 108, 118, 121, 143–163
Chlorella, 1ff
color additive, 10
growth factor (CGF), 9
human food/animal feed, 9
wastewater treatment, 13
Chlorella ellipsoidea, 17
Chlorella kessleri, 4
Chlorella lobophora, 4
Chlorella minutissima, 6, 17
Chlorella protothecoides/Auxenochlorella protothecoides, 5, 8, 17, 39, 41
Chlorella pyrenoidosa, 5, 17, 19, 41, 45, 168
Chlorellasaccharophila, 17
Chlorella sorokiniana, 4, 17, 107
Chlorella vulgaris, 3, 19, 120–125, 148, 158, 163, 173
Chlorella zofingiensis, 5, 8, 41, 44
Chlorophyll, 4, 68, 89, 96, 105, 119, 160
Chl a, 106, 153
quota, 68
Circadian clock, 156
Color additive, *Chlorella*, 10
Computational fluid dynamics (CFD), 73
Contamination, 7, 42, 95, 106, 120, 128
Controlled ecological life support systems (CELSSs), 145
Cryptochromes, 155, 158
Cryptoxanthin, 10, 11

- Cultivation, 1, 42, 89, 95, 147
 bubble-free, 176
 heterotrophic, 43, 53, 158
 mass, 1, 6, 37
 photoautotrophic, 42, 162
- Cultures, health monitoring, 110
 systems, 59
- Cyclin-dependent kinases (CDKs), 158
- D**
- 1-Deoxy-D-xylulose-5-phosphate (DXP), 46
- Dielectric spectroscopy, 117
- Dielectrophoresis (DEP), 94, 118
- Diessel reactor, 167
- Dimethylallyl diphosphate (DMAPP), 46
- Dissolved oxygen (DO), 7, 95, 164, 169
- DNA, 3, 39, 110, 147, 158
- Droop model, 64
- Dunaliella bardawil*, 41
- Dunaliella salina*, 39, 41, 52, 147
- Dunaliella tertiolecta*, 50, 125
- Dynamic image particle analysis (DIPA), 106
- E**
- Electron transfer rate (ETR), 68
- Embden–Meyerhof–Parnas (EMP) pathway, 45
- Emerson effect, 154
- Energy efficiency, 143, 149, 159, 165
- Escherichia coli*, 22, 23, 120
- Ethanol, 18, 21, 45, 92, 110, 113
- Extracellular products, 110
- F**
- Farnesyl pyrophosphate (FPP), 46
- Flow cytometry, 115
- Fluorometry, 2D, 104, 113
 PAM, 105, 108, 112, 128
- Food, 1, 37, 60, 143, 147
 nutritional, 1, 9
- Fouling, 105, 112, 164
- G**
- Galdieria sulphuraria*, 39
- Geider's model, 65
- Geneticin, 22
- Geranyl pyrophosphate (GPP), 46
- Geranylgeranyl pyrophosphate (GGPP), 46
- Glyceraldehyde-3-phosphate (GAP), 46
- Glycolate, 108
- Glycoxidation, 40
- H**
- Haematococcus pluvialis*, 43, 119
- Han–Droop model, 78
- Health effects, 37
- Heterotrophy, 8
- Hill effect, 155
- Hydrogen, 21, 39, 110, 125
- Hydrogenase, 3, 21
- I**
- Illumination, 151
- Image analysis, 89
- In-situ microscopy (ISM), 89, 105, 121, 127
- Infrared spectroscopy, 114
- Ion-selective electrodes (ISE), 111
- Ion-specific field effect transistor (ISFET)
 sensors, 89, 100, 111
- Isochrysis galbana*, 125
- Isopentenyl diphosphate (IPP), 46
- K**
- Kalman–Bucy filters, 124
- Kanamycin, 22
- Keto-carotenoids, 11
- L**
- Large eddy simulation (LES), 78
- Light, blue, 157
 distribution, 71
 intensity, 97
 red, 158
- Light-harvestingchlorophyll-binding protein
 (LHCP), 49
- Light-limitation effects, 68
- Lipids, content, 123
 peroxidation, 41
- Low-density lipoprotein (LDL), 40
- Luedeking–Piret model, 125
- Lutein, 11, 37, 39
- Lycopene, 11, 39, 40
 cyclization, 48
- M**
- Maillard reaction, 40
- Mass cultivation, 1, 6, 37
- Mass transfer, 13, 165–171
- Membranes, 3, 5, 163
 bubble-free aeration, 151, 160, 175
 conductivity, 117
 fuel cells, 110
 gas delivery, 165
 hollow-fiber, 147, 177
 mass transfer, 165
 mimicking system, 40
 permittivity/capacitance, 118
 selectivity, 166, 176
 sensor, 101

- Methane, 21
Methanol, 6, 18, 115
2-C-Methyl-D-erythritol4-phosphate (MEP) pathway, 46
Mg-chelatase, 50
Mg-protoporphyrin IX monomethyl ester (Mg-ProtoMe), 49
Microalgae, cell trajectories, 73
culture systems (MCS), 59
Microgravity, 143, 146, 151, 160, 170
Mie theory, 71
Mitochondrial retrograde regulation (MRR), 50
Mixotrophy, 7
Modeling, 59
ModuLES reactor, 176
Monitoring, online, 80, 89, 111, 170
Mono-/dichromatic illumination, 143
- N**
Nannochloropsis salina, 119
Neochloris oleoabundans, 118
Neoxanthin, 11
Nitrate reductase (NR), 23
NMR spectroscopy, 94, 117, 124, 128
Nonphotochemical quenching (NPQ), 70
Norflurazon, 23
Nutrient-limited growth, 63
Nutrients, inorganic, 2, 16, 63, 95, 102
- O**
Oleic acid, 18
Online monitoring, 89, 102
Optical density (OD), 89, 105, 115, 120, 127, 178
Optical sensors, 89, 108, 111, 127, 178
Optimization, 43, 59, 82, 91, 153, 160, 167
Organellar gene expression (OGE), 49
Oxygen, 39, 80, 101, 144, 147, 155, 160
liquid/gaseous phases, 101
- P**
PAM fluorometry, 96, 108
Pentose phosphate (PP) pathway, 45
Permittivity, 118
pH, control, 100
 ISFET, 126
Photoacclimation, 68
Photobioreactors (PBRs), 7, 59, 143
 membrane-aerated, 168
Photobleaching, 4
Photoconversion efficiency (PCE), 143, 151, 161
Photomotile behavior, 155
- Photoreceptors, 153–161, 179
Photosynthesis, 2, 42, 61, 97, 144
 efficiency and quantum yield, 106
Photosynthetic electron transport (PET), 51
Photosynthetic quantum yield (PQY), 96
Phototaxis, 155
Phototropin, 155
Physcomitrella patens, 152
Phytochrome, 155
Phytoene, 11, 42, 47
Phytoene desaturase (PDS), 23, 47, 48
Phytoene synthase (PSY), 47
Pigments, 9, 38, 61, 123
 accessory, 153
 sensory, 155, 161
 synthesis, 67
Polymer electrolyte membrane (PEM) fuel cell, 110
Porphyridium purpureum, 111, 117
Process variables, 95
Protein kinases, 158
Proteins, 1, 39, 106, 109, 113, 147, 156
 recombinant, 21
Pulse amplitude modulated (PAM) fluorometer, 96, 108
- R**
Raceways, 6, 59, 92, 96, 99
Raman scattering, 93, 116
Rapid light-response curve (RLC), 107
Reactive oxygen species (ROS), 41, 51, 147
Recombinant proteins, 21
Red drop, 154
Remote applications, 146
Respiratory electron transport chain (RET), 51
Rhodobacter capsulatus, 125
Rhodopsins, 155
RuBisCO, 162
- S**
Saccharomyces cerevisiae, 120
Scenedesmus almeriensis, 39, 42
Sensors, 105, 126, 170
 fouling, 105, 112
 ISFET, 89, 100, 111
 online, 80
 optical, 89, 178
 software, 80, 89, 124
 turbidity, 105
Software sensors, 89, 124
Space applications, photobioreactors, membrane-aerated, 170
Space missions, photobioreactors, 150

- Spirulina*, 6
Spirulina platensis/Arthrospira platensis, 170
Streptoalloteichus rimosus, 22
- T**
Temperature, 99
 - limitation effect, 70
 - variation, 74Tetrapyrrole, 49
Transesterification, 18, 21
Triacylglycerols (TAGs), 18, 65, 117
Turbidity sensors, 105
- V**
Violaxanthin, 11
- X**
Xanthophylls, 39, 41, 48, 49
- Z**
Zeaxanthin, 10, 11, 38, 40, 48–51, 153
Zeta-carotene desaturase (ZDS), 48
