

Index

C

- Capacity factor calculation, 20
- Cost profile and power adjustment, 21

D

- Data simulation, 19

E

- Electricity demand in Canada, 5
- Energy management with RES
 - planning computation methodology, 30

F

- Fossil power plants capacity, 18
- Future power planning, 17

G

- Greenhouse gases (GHG), 1

I

- Investment planning, 42
 - adjustment with reference to price increase 2015–2018, 44
 - adjustment with reference to price increase 2019–2021, 44
 - new electricity price after integration of RES 2015–2021, 46

M

- Methodological approach, 17

N

- National Energy Board (NEB), 3, 7
- National Energy Board Model till 2025 (NEBM-2025), 8, 49, 53

- Nuclear power into hydropower, Cost shift from, 22
- Nuclear power plants capacity, 18

P

- Planning computation methodology, 30
- Power generation calculation for 2025, 20
- Power generation in Canada, 5
- Power planning scenario
 - for year 2015, 31
 - for year 2016, 32
 - for year 2017, 33
 - for year 2018, 34
 - for year 2019, 35
 - for year 2020, 36
 - for year 2021, 37
 - for year 2022, 38
 - for year 2023, 39
 - for year 2024, 40
 - for year 2025, 32
- Project planning for future 10 years, 42
- PV Power Integration, 25

R

- Recalculation of structure of future power, 17
- Renewable energy sources (RES), 1 *See also*
 - Energy management with RES
 - Intermittency control costs, 22

T

- Techno-economic model (TEM), 30–32
- Techno-economic model for 2025 (TEM-2025), 8, 20, 51

W

- Wind Power Integration, 23
