B

Barrier

- inequalities, 18, 31, 36, 101
- lower, 15, 17, 18, 27, 29, 61, 94
- regularity properties, 21
- stochastic, 93, 94
- theorems, 18
- upper, 11, 17, 41, 94, 105

Basic model, 94, 101, 102

Brownian motion, 19, 47–50, 57, 61, 65, 66, 90, 99–101, 103–105

- absorbed, 49
- reflected, 48

Brunet-Derrida model, 102–104

C

Cell evolution, 103

Control problem, 11

Current reservoirs, 89, 90, 92, 97, 98

Cut operator, 15, 33, 94

D

Density reservoirs, 89

Diffusive scaling, 90, 93, 97

Durrett-Remenik model, 88, 104

E

Edge, 13, 14, 47, 49, 51, 66, 92, 94, 101, 103, 104

Empirical measure, 102, 105

F

Free boundary, 11, 13, 101, 103, 105

Free evolution operator, 15, 16, 33, 94

G

Green function, 15, 16, 41, 47, 94

H

Heat equation, 11, 16, 19, 47–51, 55, 89, 94

Hydrodynamic limit, 89, 92–94, 97, 98, 101–106

I

Independent random walkers, 90, 92, 98

Interacting particle systems, 1, 87, 88, 100

Interface models, 106

M

Macroscopic evolution, 1, 2

Main theorem, 11, 14, 61

Mass transport, 11, 17–19, 31, 93

Mass transport inequalities, 31

Microscopic dynamics, 90, 93

Multispecies models, 104, 105

O

Optimal sequences, 12, 14, 55, 61

P

Partial order, 17, 18, 31, 32, 93

Particle model, 89, 101

PDE, 101

R

Relaxed solutions, [12](#), [19](#)

S

Space equi-continuity, [22](#)

Stationary solutions, [12](#), [13](#), [97](#), [98](#), [103](#)

Stefan problem, [11](#), [13](#)

Super-hydrodynamic limit, [87](#), [97](#), [99](#), [100](#)

T

Time equi-continuity, [24](#)
