

Index

A

Action, 69
Alpha particles, 91
Alpha rays, 105, 106
Andromeda galaxy, 190
Anthropic principle, 176, 196–198, 204
Antielectrons, 102
Atoms

- alpha particles, 91
- automatic electron detectors, 91
- carbon atoms, 90
- coherent light source, 87–88
- hydrogen atom, 83, 84
- Large Hadron Collider, 92, 93
- laser light, 88
- Lithium atom, 83
- microscope, 86–87
- photoelectric effect, 89
- position distribution, 84–86
- radio waves, 89
- visible light, 90
- wavelength, 88–89
- wave types, 89
- X-rays, 90

B

Bell-curve probability distribution, 28–29
Bell's inequality, 58
Bell's theorem, 48–49
Beta rays, 105, 106
Bipolar quantum

- characteristics, 15
- example, 15

HUP

- attributes, position, and velocity, 21
- Born rule, 20

- classical observation, 22
- hidden variables, 22
- limiting principle, 20–21
- measurement issues, 20

quantum probability waves

- conceptual and computational, 18–19
- observed position, 16–17
- wavefunction, 16–17
- wave of probability, 16
- wild-eyed new quantum theory, 18

wavelike and particle-like attributes, 13–14
Black holes

- cosmic rays, 96
- dimensional analysis, 150
- Einstein's theory, 96, 98, 100
- escape velocity, 151
- evaporation process, 103
- extra dimensions, 153–155
- field lines, 99–101
- gravitational forces, 99
- Hawking's calculation, 102–103
- Hawking's evaporation, 152
- impact parameter, 152
- Large Hadron Collider, 95, 96, 102
- lightweight, 102
- LIGO experiment, 97–98
- Newton's constant, 99
- Planck length, 98, 101–102, 150
- primordial black holes, 97
- Schwarzschild metric, 150
- Schwarzschild radius, 97, 98
- space-like direction, 151

Boltzmann's constant, 134, 169
Boson, 105–109, 123, 144, 164–166, 168, 169
Brane, 117
Bubble universes, 188–192

C

Cell phone radiation
vs. brain gliomas, 122–123
 electromagnetic waves, 120, 121
 microwaves, 122
 sound waves, 121
 Classical double-slit experiment, 29–30
 Classical single-slit experiment, 27
 Cold fusion, 80, 123–125
 Compactified dimensions, 186
 Complex numbers, 156
 Configuration space, 37
 Conjugate variables, 69–70
 Copenhagen interpretation
 geocentric *vs.* heliocentric models, 63
 illusion/perception, 64
 many-worlds interpretation, 64–65
 new age cottage industry, 64
 objective collapse, 64
 wave-function collapse, 63–64
 Cosmic microwave background (CMB), 179–181
 Cosmic rays, 96
 Cosmic tunneling, 188
 Curved spacetime, 100, 148

D

Delayed choice experiments, 58
 Dirac equation, 195
 Double-slit experiment
 EPRB, 8, 9, 11
 soccer
 bell curves, 26
 classical experiment, 29–30
 example of, 26
 HUP, 26
 quantum experiment, 30–33
 single-slit experiment, 27–29
 tangible wave, 26
 wave interference, 26
 wave of probability, 25
 Double-slit interference pattern, 70
 Dynamical entanglement, 58

E

Einstein Podolsky Rosen Bell (EPRB) experiment
 American dimes, 51
 bulbs flashing, 53
 detector settings, 52–53
 experiment, 8, 9, 11

 identical coin detectors, 50
 quantum version, 54–55
 “tail/head” detectors, 51–52
 Einstein Podolsky Rosen (EPR) experiment, 47
 Einstein’s special theory of relativity
 Anna’s coordinates, 138
 arbitrary angle, 135
 boosted coordinate system, 138
 coordinate system, 135
 distances and times, 139–140
 events, 136–137
 invariant, 136, 140
 kinetic energy, 140
 origin, 136
 relativistic length contraction, 139
 rotating the map, 135
 spatial positions, 135
 Taylor series expansion, 140
 time interval to Bob, 139
 Einstein’s theory, 96, 98, 100
 Electromagnetic waves, 120, 121
 Electron scattering, 102
 Entanglement, 5, 47–48, 58
 Escape velocity, 97
 Eternal inflation, 188–189, 200
 Event horizon, 97
 Expanding universe, 178
 Extra dimensions, 98–103, 116, 117, 153–155,
 186–188, 196

F

Fermions, 107
 Force-carrying particles, 106
 Fourier transform function, 70
 Fusion
 deuterium production reaction, 168
 Gamow energy, 169–170
 probability distribution, 169–170
 reduced mass, 168
 relative velocity, 168
 solar core, 170
 thermal average, 170

G

Gamma rays, 105, 106
 Gauge bosons, 106, 165
 Generators of the rotation group, 157
 Ghirardi, Rimini, and Weber (GRW), 64
 Gluon, 106

- The God particle, *see* Higgs boson
 Goldstone's theorem, 163
 Gravitational forces, 99
 Gravitational potential energy, 108
 Gravity
 coordinates of spacetime, 148
 Einstein's equivalence principle, 149
 escape velocity, 147, 151
 free-falling elevator, 149
 geodesic, 148
 gravitational potential energy, 146
 gravitational redshift, 149
 invariant interval, 148
 masses, 145–146
 spherical coordinates, 147–148
 Group theory
 eigenstates, 160
 group of rotations, 159
 identity matrix, 158
 infinitesimal rotation, 157–159
 matrix multiplication, 157
 origin, 157
 quantum spins, 160
 rotation matrix, 158
 three-dimensional space, 157
- H**
 Hadrons, 106
 Hawking radiation, 103, 155
 Heisenberg Uncertainty Principle (HUP)
 attributes, position, and velocity, 21
 Born rule, 20
 classical observation, 22
 double-slit experiment, 26
 hidden variables, 22
 limiting principle, 20–21
 measurement issues, 20
 Helium atoms, 106
 Heterotic theory, 116
 Hidden variables, 5, 6, 22, 28, 45, 47–49, 54, 63
 Higgs boson
 deflections, 107
 energy density, 109, 111
 force carriers, 106
 gluon, 106
 gravitational potential energy, 108
 hadron and lepton, 106
 quantum spin, 107
 quarks, 106
 rim, 110
 W and *Z* bosons, 109
 Higgs field, 107–111, 156, 157, 161–165, 167, 168, 182
 anti-bottom quark, 165
 classical contribution, 167
 complex conjugate, 161–162
 electroweak group, 161
 energy-dependent quantum corrections, 166
 fine-structure constant, 166
 gauge coupling, 165
 Goldstone's theorem, 163
 Higgs boson mass, 164
 Higgs mechanism, 165
 invariants, 164
 massless spin-one particles, 165
 potential energy density, 162–163
 quantum correction, 167–168
 quark fields, 164
 renormalization group running, 167
- I**
 Integrated luminosity, 155
 Interpretations
 behavior and automatic thinking, 66
 causal narratives, 61
 causative agent, 67
 Copenhagen interpretation
 geocentric *vs.* heliocentric models, 63
 illusion/perception, 64
 many-worlds interpretation, 64–65
 new age cottage industry, 64
 objective collapse, 64
 wave-function collapse, 63–64
 depictions, 66
 metaphysics, 62
 treatments, 65–66
- K**
 Kinetic-plus-potential energy, 70–71
- L**
 Large Hadron Collider (LHC), 82–83, 95, 98, 101, 102, 106, 155
 Leptons, 106
 Lightweight black hole, 102
 The LIGO, 97–98
 Luminosity, 143, 155

M

Many-particle Schrödinger equation, 71
 Mega electron-volts (MeV), 134
 The Metric, 148, 149
 Microwaves, 122
 Milky Way galaxy, 187
 Mini black hole, 95–103, 155
 “M theory”, 116, 117
 Multiverse theory
 conservative, 196
 nonzero negative curvature, 203
 Penrose diagram, 202
 positive nonzero curvature, 202
 scientific theory, 193–195
 spatial curvature, 201

N

Negative probabilities, 58
 Newton’s constant, 99
 Nonlocality, *see* Spooky action at a distance

O

Objective collapse, 64
 Observer, 20, 25, 26, 37, 43–45, 64, 184, 190–192,
 196, 200

P

Parallel universe
 brane, 117
 space and time coordinates, 112–115
 supergravity, 116
 symmetry transformations, 113
 10-dimensional theory, 116
 Partial differential equation (PDE), 70
 Particle colliders
 Higgs boson
 deflections, 107
 energy density, 109, 111
 force carriers, 106
 gluon, 106
 gravitational potential energy, 108
 hadron and lepton, 106
 quantum spin, 107
 quarks, 106
 rim, 110
 W and Z bosons, 109
 parallel universe
 brane, 117
 space and time coordinates, 112–115

supergravity, 116
 symmetry transformations, 113
 10-dimensional theory, 116

Particles

atoms
 alpha particles, 91
 automatic electron detectors, 91
 carbon atoms, 90
 coherent light source, 87–88
 hydrogen atom, 83, 84
 Large Hadron Collider, 92, 93
 laser light, 88
 Lithium atom, 83
 microscope, 86–87
 photoelectric effect, 89
 position distribution, 84–86
 radio waves, 89
 visible light, 90
 wavelength, 88–89
 wave types, 89
 X-rays, 90
 definition, 81–83
 PDE, *see* Partial differential equation (PDE)
 Photoelectric effect, 89
 Planck length, 98, 101–102, 150, 154
 Planck mass, 154
 Planck’s constant, 69
 Planck time, 154
 Position–momentum uncertainty principle, 69
 Positive probabilities, 58
 Positrons, 102, 123, 167, 168, 195
 Primordial black holes, 97
 Probability distribution function, 40
 Probability wave, 16–19, 25, 26, 49

Q

Quantum double-slit experiment, 30–33
 Quantum probability waves, 16–19, 25, 26
 Quantum single-slit experiment, 28–29
 Quantum spin, 107
 Quantum wavefunction, 36
 Quarks, 81, 82, 106
 Quasi-stable configurations, 187

S

Scattering
 billiard balls, 141
 differential cross section, 143, 145
 energy and momentum conservation, 142

- fine-structure constant, 144
 - fudge factor, 141
 - help-factor, 141
 - Higgs lifetime, 145
 - luminosity, 143
 - Planck's constant, 141
 - squared amplitude, 145
 - total cross section, 143–145
 - unbound electrons, 144
 - wave-length, 141–142
 - (Time-dependent) Schrödinger equation, 16, 71
 - Schrödinger's Cat, 8, 42–46
 - Schwarzschild metric, 150, 154
 - Schwarzschild radius, 97, 98
 - Scientific theory, 193–195
 - Single-slit experiment, 27–29
 - Singular quantum
 - accurate experimental predictions, 3
 - attributes, 5
 - debate, dissatisfaction, and disagreement, 4
 - EPR experiment, 5–6
 - experimental facts, 8–9
 - experts, 4–5
 - Feynman's credentials, 6
 - hidden variables, 6
 - intermediate-level audience, 10–11
 - misconceptions, 4
 - non-expert reader, 6–7
 - obvious fact, 4
 - ontological ambiguity, 3
 - preposterous fiction, 4
 - quantum consumer, 7–8
 - quantum-themed books, 7–8
 - string theory, 7
 - Spin attributes, 71
 - Spinor, 157–162, 164, 165
 - Spooky action at a distance
 - Bertlmann's socks, 48–49
 - classical probability, 49
 - EPR, 47
 - EPRB
 - American dimes, 51
 - bulbs flashing, 53
 - detector settings, 52–53
 - identical coin detectors, 50
 - quantum version, 54–55
 - “tail/head” detectors, 51–52
 - Grand Sudoku Challenge, 56–59
 - hidden variables, 49
 - measurement, 47–48
 - relativity theory, 48
 - Standard deviation, 69
 - Standard quantum theory, 38, 40
 - String theory, 7, 116, 185, 186, 188, 189, 195, 202, 204, 205
 - Supergravity, 116
 - Système international (SI) units, 69
- T**
- Tangible waves, 31
 - 10-dimensional theory, 116
- U**
- Ultraviolet rays, 121
 - Uncertainty principle, 8, 20–23, 69, 70, 85, 102
 - Units
 - advantages, 131–132
 - Big Bang explosion, 131
 - dimensional analysis, 133
 - Einstein's equation, 132
 - four-dimensional spacetime, 134
 - Greek letters, 133, 134
 - Maxwell's innovations, 133
 - physics constants, 134
 - quantities, 131–132
 - Universe
 - Andromeda galaxy, 190
 - big-bang nucleosynthesis, 180
 - “big bang” phase, 179
 - bubble nucleation process, 191
 - bubble universes, 188–192
 - CMB, 179, 180
 - dark matter and dark energy, 178
 - definition, 17
 - Doppler effect, 179
 - Higgs field, 182
 - matter energy, 183, 184
 - Milky Way galaxy, 177
 - multiverse theory, 189
 - Penrose diagram, 181, 192
 - quantum gravitational theory, 185
 - quantum tunneling process, 188
 - quasi-stable configurations, 187
 - spacetime, 180–181, 186
 - string theory, 186, 187
 - vacuum energy, 182–185
 - Uranium nucleus, 124, 125

V

Vacuum energy density, 182–185

W

W and Z bosons, 109

Wavefunction

many-particle, 36–37

measurement

absolute phase, 42

collection of particles, 40

complex numbers, 41

constructive interference, 41

data interpretation, 38

experiments, 38–39

relative phase, 41–42

single-particle, 39

standard quantum theory, 38

trajectories, 42

Schrödinger's cat experiment

biomolecules, 46

configuration space, 42–43

macroscopic objects, 44, 46

nano-soccer balls, 46

nonlocality, 43

particle interconnectedness, 43–44

random collapse, 44

wave of superposition, 44–45

Wavefunction collapse, 17, 63

Wave interference pattern, 31

Wave-particle duality, *see* Bipolar quantum

Web-based animations, 11

X

X-rays, 90

Z

Z bosons, 106, 109, 165, 168
