

Index

A

Absorption, 191
AgI, 254
Amplified dispersive Fourier transformation, 126
Amplified spontaneous emission, 19
Angular biphoton wave function, 91
Angular non-collinear states, 92
Angular Schmidt modes, 89
Apoptosis, 98, 103
Astrophysical Plasma, 26

B

Bioimaging, 113
 confocal microscopy, 119
 time gating, 118
Bioluminescence, 97
Bioorganic molecules, 71
Biphoton polarization qutrits, 88
Biphoton state vectors, 87
Birefringent crystal, 85
BLUF, 187

C

Carbon atom, 140
CCl₄, 50
Caspase 3, 104
CFRP, 239
Charge-separated state, 195
Child filaments, 38
Chiral photomagnet, 267
Chiral structure, 267
Circularly polarized components, 72
 left-handed circularly polarized component, 75
 right-handed circularly polarized component, 74

Circulating tumor cells, 129
Classical trajectory model, 136, 141
Cluster beam, 154
 laser-cluster interaction, 155
 supersonic jet, 155
Coherent addition, 230
Complementation, 97
Conical emission, 36
Conjugates, 118
 noncovalent, 118
Continuous variables, 85
Conversion efficiency, 238
Cosmic rays, 26
Cosmic ray acceleration, 27
Coupled Channel Deperturbation Analysis, 171
Cubic nonlinearity, 71
Curie temperature, 266, 270
Cyano-bridged bimetal assemblies, 263

D

Definition of entanglement, 86
Degree of entanglement, 87
Density-matrix, 162
Desorptions of excited atoms of xenon from two-photon excited clusters, 149
2D hydrodynamic simulations, 17
Diazoketone, 191
Dimensionality of the single-particle Hilbert space, 87
Discrete variables, 82
Dissociation, 135
Doppler-free, 161
Double ionization, 53
Double-Gaussian wave functions, 91
3D PIC simulations, 18
3D-Raman light bullet, 39
Dynamic wave-front aberrations, 228

E

- (e, 3e) process, 64
- Electron momentum spectroscopy, 53
 - laser-assisted electron momentum spectroscopy, 53
 - time-resolved electron momentum spectroscopy, 67
- Electron-electron interaction, 136
- Electron-to-proton mass ratio, 182
- Entanglement quantifiers, 87

F

- Femtosecond laser pulse 153
 - laser-breakdown plasma, 154
- Fermionic Molecular Dynamics, 137
- Feshbach molecules, 181
- Feshbach resonance, 180
- Filamentation, 35, 221
 - Birefringence, 38, filament, 221
 - IR filament, 223
 - UV filament, 223
- Ferromagnetic ordering, 272
- Flavin, 185
- Flavin-containing proteins, 185
- Fluorescence, 97
- Focused beams, 221
 - tight-focusing, 225
 - wave-front astigmatism, 221
 - astigmatism parameter, 226
 - weakly focused beam, 223
- Focused-ion beam (FIB), 280
- Four-wave mixing, 163
- Frequency-angular spectrum, 36

G

- Gas electron diffraction, 48
- Generalized moving-focus model, 37
- GFP, 97
- Glass, 254

H

- Hard X-rays, 16
- Helium-Ion Microscope, 279
 - nanofabrication, 282
 - secondary electrons (SE), 282
 - energy distribution, 282
 - yield, 282
- Hermit–Gaussian functions, 91
- High-contrast femtosecond pulse, 19
- High-speed imaging, 125
- High-spin state, 266
- Hong-Ou-Mandel effect, 89

- Hybrid carbon-crystalline structures with incorporated Au–Ag nanoparticles, 249
- Hybrid nanostructures, 249

I

- iLOV, 185
- Imaging, 97
- Incomplete electron ejection, 140
- Intense laser field, 135
- Intense sub-picosecond pulses, 153
 - terahertz, 153
 - X-ray, 153
- Intensity clamping, 37
- Ionization, 135
- Ionization-excitation, 53

K

- Kerr effect, 221
- Kroll-Watson theory, 49, 51
 - Kroll-Watson sum rule, 65

L

- Laguerre–Gaussian components, 77
- Laser ablation, 254
- Laser cooling, 176
- Laser plasma experiments, 26
- Laser-assisted (e, 2e), 54
- Laser-assisted elastic electron scattering, 47
 - femtosecond-LAES, 48
- Laser-assisted electron diffraction, 50
- Laser-assisted momentum profile, 57
- Laser-cooling, 179
- Laser-cutting, 239
- Laser-induced transformation of supramolecular complexes, 245
- Laser-inspired chemical transformations, 243
- LIESST effect, 264
- Lithography, 279
- Luciferases, 105
- Luciferin, 105
- Luminescence, 191

M

- Macroscopy, 126
- Magic cluster, 209
- Magnetic field, 27
- Magnetic hysteresis loop, 267, 270
- Magnetic islands, 29
- Magnetic reconnection, 31
- Magnetization-induced second-harmonic generation, 267
- Magneto-Optical, 263

- Marburger formula, 222
- Marcus theory, 201
- Metal clusters, 205
- Metal complexes, 263
 - heterometallic, 109
 - ligand, 112
 - polyphosphines, 109
 - supramolecular, 109
- Metal-oxide nanoparticles, 263
