

Index

A

Analytical properties, 99
Antiparticles, 489
Astrophysics, 55

B

Beads, 401
Beth–Uhlenbeck method, 77, 79, 108
Bethe–Salpeter equation, 265, 267
Bloch equation, 195
Bogoliubov condition, 350
Bogoliubov initial correlations, 350
Bogoliubov parameter, 197
Bogoliubov plasma correlation functions, 138
Bogoliubov quantum kinetic theory, 349
Bose–Einstein condensation, 12, 107
Bose–Einstein distribution, 106
Bose–Einstein gases, 9, 74
Brownian motion, 356

C

Canonical and grand-canonical density expansions, 248, 414
Carnahan–Starling approximation, 73
Casimir conditions, 499
Chemical description, 84, 241
Classical Coulomb systems, 14, 127, 208
Classical OCP, 122, 208
Cluster expansions, 67
 in fugacities, 241
Color–electric Coulomb potential, 499
Color Path Integral, 497
Combined density–fugacity expansions, 254
Computer simulations, 32

Coulomb transitions, 29, 378, 384, 443, 487, 521
CPIMC, 398

D

Debye, P., 1, 16, 120
Dense fluids, 7, 70
Dense gases, 67
Density functional, 387
Density matrix, 397
Detailed balance, 341
Determinant, 398
Direct correlation function, 68
Donors, 42
Dorso potential, 384, 386
DPIMC, 398

E

Ecker–Weizel shift, 264
Effective Hamiltonian, 390
Eggert–Saha equation, 19, 150
Einstein quantum correlations, 11
Electrolytes, 14, 117, 127
Entropy, 352
 Shannon, 353
EOS for dense plasma, 279, 301, 312, 320, 456, 464, 508
EOS for non-associating gases, 79
Estimator, 408
Eugene Wigner, 17
Excitons, bi-excitons, 443
Excluded volume, 74
Extended density representations, 257
Extended Hartree–Fock–Wigner approximations, 274, 312

F

Fermi–Dirac gases, 9, 74
 Fermion Slater function, 223
 Finite mode corrections, 141
 Fixed-Node' Density Matrix, 432
 Fluctuation–dissipation relations, 355, 361
 Fock shift of energy levels, 269
 Fugacity expansions, 81, 241

G

Gaussian wave packets, 388
 Ginzburg–Landau kinetics, 340
 Grand canonical ensemble, 241

H

Hans Falkenhagen, 16
 Hard core fluids, 72
 Hartree–Fock–Wigner pressure, 271
 High energy densities, 42
 High energy density states, 487
 Higher order correlations, 211
 Higher order screening, 211
 Hopping dynamics, 367
 H-theorem, 354
 Hugoniot curves, 323
 Hugoniot for deuterium plasmas, 326
 Hypernetted-chain equation, 71

I

Ideal gas, 9
 Information, 352
 Inversion problem, 88
 Ionic fluids, 14
 Ionization, 39, 117, 150, 156
 Ionization equilibrium, 18, 150
 Isentropes, 323
 Isentropes for H plasmas, 326

K

Kelbg–Deutsch potential, 198
 Kelbg's Effective Potential Approximation (KEPA), 137
 Kinetic equations, 337
 Kinetic theory, 36
 Klein–Gordon equation, 487
 Klimontovich operator, 361
 Klimontovich–Wigner functions, 382
 Kullback entropy, 354
 theorem, 354
 Kullback functional, 355

Kullback information, 353

L

Lattice QCD, 498
 Lorentz invariant, 489

M

Many-component systems, 199
 Markovian state, 412
 Markovian steps, 412
 Mass action law, 85, 218
 Mayer, J., 5
 MC cell, 412
 Measure of the path integral, 398
 Meghnad Saha, 19
 Method of Uhlenbeck and Beth, 13
 Metropolis algorithm, 32
 Metropolis–Hastings Algorithm, 407
 Mixture rules, 72
 Molecular distribution functions, 67
 Molecular dynamics simulations, 33, 367
 Momentum distribution, 383
 Momentum-dependent interactions, 384
 Momentum-dependent potentials, 381
 Monte Carlo simulations, 33, 397, 487
 Monte Carlo transitions, 344
 Mott effect, 400
 Multishock compression, 325

N

Nodes, 398
 Non-diagonal pair density operators, 202
 Nonequilibrium, 337, 367
 Non-ideal gases, 67
 Nonideal plasmas, 279
 Nuclear fusion, 330
 Nuclear reactions, 330
 Numerical methods, 397
 Nyquist–Callen–Welton relation, 362
 Nyquist–Klimontovich relation, 362

O

Occupation numbers, 398
 Off-diagonal effective potentials, 206
 One-Component Plasma (OCP), 121
 Onsager matrix, 357
 Onsager postulate, 37, 341
 Ornstein–Zernike equation, 71
 Ornstein–Zernike relations, 67, 68

P

Padé approximations in chemical picture (PACH), 324

Pair correlation function, 199

Pair correlations, 77

Partition function, 25

Path integral, 398

Path integral quantum Monte Carlo method, 398

Pauli blocking shift, 270

Pauli equation, 341

Pauli–Fock shifts, 271

Pauli kinetics, 343

Pauli postulate, 341

Pauli principle, 11

Pauli transition probabilities, 342

PBL partition function, 29

PB-PIMC, 399

Percus–Yevick equation, 71

Permutations, 398

Phase shifts, 79

Phase transitions, 18, 29, 443, 470

PIMC, 398

Planck–Brillouin–Larkin partition function, 28, 152, 219

Plasma fluctuations, 359

Plasma kinetic equations, 359, 361

Plasma parameter, 121

Plasma Phase Transition (PPT)
first order, 323

Plasmon, 28, 31, 146

Poisson–Boltzmann equation, 16

Prototype models of interaction, 4

Pseudopotential, 399

Q

Quantum correlations, 359

Quantum Debye–Hückel approximation (QDHA), 132

Quantum FDT, 363

Quantum statistics of interacting gases, 13

Quantum ‘Tails’, 428

Quark–gluon plasmas, 48, 497, 508, 521

Quasiparticle, 499

R

Real gases, 67

Reduced Mass Approximation (RMA), 215

Regularization of the partition function, 25

Relativistic particle beams, 54

Relativistic plasmas, 48, 49, 487, 532

Relativistic Wigner Function, 526

RHIC, CERN, LHC, 497

RPIMC, 398

S

Saha ionization theory, 41

Screening, 16
in weakly coupled plasmas, 197

Second virial coefficient, 77

Semiconductor plasmas, 42

Shannon entropy, 352, 353

Shear-viscosity, 554

Sign problem, 398

Slater functions, 76, 95

Slater sums, 76, 77

Standard model of elementary particles, 50

Statistical thermodynamics of dense fluids, 7

Stress–energy tensor, 554

Strongly coupled fluid, 1

SU(3) group Haar measure, 501

SU(3) Partition Function, 497

SU(3) structure constants, 516

Symmetry relations, 357

T

Tolman kinetics, 344

Tolman transition kinetics, 344

Transition probabilities, Pauli, 342

Transport, 35, 337, 367, 521

Two-component Coulomb systems, 397

U

UEG, 432

Universe, 57

V

Valley of bound states, 158

Van der Waals
centennial, 10
equation of state, 3, 8

Van der Waals, J.D., 1

Variance, 408

Virial coefficients, 76

Virial expansion, 220

Virial functions, 223

W

Wave packet dynamics, 389

Wave packet molecular dynamics, 386, 388

Wide range EOS, 279

Wigner dynamics, 381
Wigner formalism, 381, 414, 521
Wigner function, 414
Wigner lattice, 17, 18, 272, 470
 effects, 144
Wong's color vectors, 499
WPIMC, 399

Y
Yukawa gas, 90
Yukawa plasmas, 102
Yukawa systems, 99
