

# Index

## A

Adhesion force, 36  
Available shear stress, 2, 3, 5–35

## B

Bi-variate plot, 50, 52  
Bragg's Law, 63

## C

Chi-Square test, 67  
C-M plotting, 40, 41  
Cohesive property of sediment, 36  
Co-relation matrix, 72  
Critical shear stress, 2, 3, 5–35, 37

## D

Degree of freedom, 67, 70  
Diffractogram, 62–64, 67

## E

Estuarine environment, 79

## F

Flushing agent, 64  
Friction, 35

## G

Gradient of river bed, 6, 7, 22  
Grain-fabric effects, 35  
Grain sheltering, 5

## H

High and low tide, 2, 6, 7, 20, 26, 34, 77  
Hoogly estuary, 47

Hydrodynamic processes, 40, 41, 54

## I

Initiation of motion, 6, 35, 37

## K

Kurtosis, 3, 40, 79

## L

Linear Discriminate Analysis (LDA), 3, 40, 41

## M

Matrix flushing method, 64  
Mineralogical composition, 58, 62, 67

## N

Non-uniform sediment, 35, 36

## O

Organic mat, 7

## P

Packing of grains, 7, 35  
Principal Component Analysis (PCA), 69, 70

## R

River discharge, 51

## S

Sedimentation, 2, 3, 6, 7, 9, 13, 20, 26, 33–37, 47, 48, 51, 53, 58, 59, 80  
Sediment discharge, 22, 39, 41, 43, 45, 46, 48, 80  
Sediment entrainment, 30, 35–37, 79

Shallow marine environment, [41–46](#)

Shoal area, [33](#)

Sieving technique, [7](#), [40](#)

Skewness, [3](#), [40](#), [41](#), [51](#), [52](#)

Sorting of grains, [3](#), [35](#)

Stream energy, [1](#), [2](#), [33](#), [34](#), [48](#)

## **T**

Tidal asymmetry, [2](#), [47](#), [58](#)

Trapping of sediment, [34](#), [58](#), [59](#), [71](#), [77](#), [80](#)

## **W**

Water discharge, [2](#)

Water velocity, [1](#), [3](#), [6](#), [22](#), [26](#), [34](#)

## **X**

X-Ray Diffraction (XRD), [57–59](#), [61](#), [62](#), [70](#),  
[80](#)
