

# Index

## A

- Adatoms, 392
- Alloy analogy model, 340, 341, 343
- Angle-resolved photoemission, *see* cross-sections:ARPES
- Anisotropy of XANES spectra, 347–349
- Attosecond, 351

## C

- Clusters, 104, 389
- Coherent Potential Approximation (CPA), 94–134, 340, 341
- Complex energy, 69, 81, 85, 181–183, 195, 289–294, 297, 367, 371
- Complex magnetism, 384
- Configuration mixing, 144–147, 156–157, 160
- Correlated pair, 351–355
- Cross-sections
  - ( $e,2e$ ), 29, 259–260, 264, 352, 354, 356
  - 2D-energy-distributions, 355
  - AED, 266–270, 353
  - APECS, 29, 351–356
  - ARPES, 38, 46, 100, 127, 132, 135, 137, 342–343
  - BEEM, 89, 295
  - EELS, 41, 60, 62, 64, 87, 358
  - EXAFS, 68, 198, 206, 208, 213, 222, 226, 233, 242, 245, 249, 250, 254, 336, 377
  - general, 29, 36, 45
  - LEED, 24, 32
  - PED, 24, 30, 320, 323, 328, 334

- photoabsorption, 173, 179, 180, 183, 193, 290
  - photoemission, 69, 78, 85, 89
  - photons, 39
  - REXS, 29, 86, 368
  - RXS, 346, 348–349
  - scattering, 312
  - semi-relativistic, 311
  - XANES, 86–88, 197, 202, 206, 210, 211, 214, 216, 289, 367
  - XAS, 24, 38, 47, 69, 85, 102, 197, 200, 221, 223, 227, 229, 311, 359, 376, 378
  - XMCD, 103, 104, 121, 123, 363, 368, 387
  - XPS, 266, 327, 334
- Cumulant expansion, 330, 376

## D

- Density Functional Theory (DFT), 96, 127, 267, 270, 271, 275, 313, 368
- Dirac equation, 97, 302, 303, 363
- Disordered systems, 95, 109
- Display-type analyzer, 319, 323–325
- Dopants, 123
- Double photoionization resonant, 351
- Dynamical Mean Field Theory (DMFT), 96–98, 100, 101, 128–133, 370, 375

## E

- Electron correlation, 171, 173, 185, 195, 290, 351
- Electron pairs diffraction, 352–356
- Entanglement, 351–354

Exact diagonalisation, 370–373  
 Excitonic-polaron model, 380  
 Extrinsic loss, 202, 328–329, 336, 375–380

**F**

Fermi energy, 181, 289  
 Fermi's golden rule, 29, 102, 128, 143  
 Finite Difference Method (FDM), 368  
 Foldy–Wouthuysen transformation, 310  
 Forbidden reflections, 346, 348, 349  
 Forces, 314, 316  
 Full potential, 313, 314, 316, 371

**G**

Gauge invariance, 308  
 Gaunt coefficient, 45, 62, 279, 360  
 Gaussian Type Orbitals (GTO), 277–279

**I**

Independent Particle Approximation (IPA),  
 144, 148, 284, 286  
 Inelastic mean free path, 36, 48, 50, 52, 127,  
 226, 227, 260, 376  
 Interfaces, 121  
 Intrinsic loss, 202, 328–329, 336, 375–380

**K**

Keldysh Green's function, 328, 333, 334,  
 337  
 Kubo–Greenwood equation, 341

**L**

Landau–Lifshitz–Gilbert equation, 385  
 Linear dichroism, 283, 285, 288  
 Local Density Approximation (LDA), 122,  
 133–134  
 Local interaction zone, 315  
 Local Spin Density Approximation (LSDA),  
 96–98, 100, 101, 128–133

**M**

Magic angle, 394  
 Magnetic dipole term, 387  
 angular dependence, 392, 393  
 Magnetic moment, 105, 109, 121, 123, 387  
 Molecular Dynamics (MD), 198, 203–216  
 Monolayers, 392  
 Multiplets, 145, 156, 157

**O**

One-step model of photoemission, 93, 100,  
 101, 127–129, 132–135

**P**

Particle-hole Coulomb interaction, 160, 161,  
 163  
 Perturbation theory, 308  
 Photoelectron diffraction, *see* cross-  
 sections:PED  
 Photoelectron holography, 319, 321, 323–  
 325  
 Plasmons, 145, 328–330, 375  
 Projection potentials, 314, 316  
 Pseudopotential, 275  
 Pump-probe, 333–336

**Q**

Quadrupole moment, 388  
 Quasi-boson approximation, 376  
 Quasi-particle, 127, 129–130, 375

**R**

Radial Dirac equations, 302, 303, 363  
 Radial mesh, 281  
 Reverse Monte Carlo, 222–223, 231, 233,  
 240, 241, 243–247, 249–250, 255  
*R*-matrix, 150–155, 158–160, 166–167

**S**

Satellites, 375, 377  
 Scattering theory  
 asymptotical states, 12, 15–17, 19, 261  
 Dyson equation, 13, 14, 16, 22, 84, 94,  
 96, 97, 101, 171–173, 176, 177, 179,  
 184, 192, 195, 202, 304, 316, 334, 335,  
 376  
 Green's function, 37, 47, 48, 62, 64, 68–  
 70, 77, 81–83, 85, 93–103, 105, 127,  
 128, 289, 290, 292, 298, 299, 301, 304,  
 305, 314–316, 360, 366, 367, 370, 371,  
 376, 378  
 analytical continuation, 181, 182,  
 195, 290, 292  
 Hilbert–Schmidt kernel, 79–81  
 KKR structure constants  
 full, 84  
 screened, 383  
 standard, 28, 44, 71, 81, 84, 103, 176,  
 290

- $K$ -matrix, 171, 172, 185, 189, 190
  - Lippmann–Schwinger equation, 13, 14, 16, 19, 42, 45, 69, 73, 74, 78, 79, 94, 174, 187, 188, 297, 316
  - Møller wave operator, 16, 17, 262, 263
  - muffin-tin potential, 21, 53, 68–70, 72, 76–78, 81, 84, 86–88, 97, 172, 173, 181, 185, 195, 199, 200, 223, 230, 277, 278, 291, 313, 368
  - multichannel, 146–148, 171–173, 185, 188–190, 192
    - coupled integro-differential equations, 171, 186, 190, 195, 292
  - multiple scattering
    - amplitude, 28, 71, 73, 78, 85, 363, 364, 366
    - correlation expansion, *see*  $n$ -body expansion
    - Green’s function matrix, 172, 176, 179, 192
    - matrix inversion, 27, 46, 78, 80, 81, 89, 103, 200, 223
    - multichannel, 145, 146, 149, 150, 153–155, 158, 162, 163, 165–167, 201, 283, 284, 287–289, 292–294, 375
    - $n$ -body expansion, 27, 225–229, 231, 240
    - scattering path operator, 24, 26, 27, 46, 50, 80, 95, 98, 100, 102, 146, 153–155, 164, 299, 341, 360
    - series expansion, 27, 50, 78, 198, 224, 225, 267, 270
  - optical potential, 53, 298, 327, 343, 366
  - optical theorem, 15, 24, 46
  - phase shifts, 6, 8, 51, 52, 57, 146, 152, 174, 223, 230, 237, 245, 371
  - propagator
    - free electron, 12, 13, 16, 28, 51, 71, 78, 80, 200, 202, 223, 224, 304, 328
    - full, 12, 13, 16, 302–304
  - relativistic, 60, 94, 96–98, 100, 102–104, 128, 230, 302, 304, 388
  - scattering amplitude, 8
  - scattering operator, *see*  $S$ -matrix
  - scattering path operator, 367
  - screened KKR method, 315, 381–385
  - $S$ -matrix, 17, 189
  - $t$ -matrix
    - full potential, 43, 73, 77, 86, 200, 223, 262–263, 301, 314, 368
    - lattice vibrations, 339, 340, 342
    - muffin-tin, 8, 10, 16, 26, 171, 174, 175, 188, 192, 200, 223
    - multichannel, 150–153, 155, 163–164, 167, 187, 188
    - non-local potential, 301, 304
    - screened, 383
    - spin fluctuations, 339–342
    - transition operator, 14–16, 19, 22, 223, 304
    - translation operator, 20
    - two-potential formula, 18
  - Screened Coulomb interaction, 56, 336, 360–361
  - Screening potential, 384
  - Screening transformation, 381, 383
  - Self-energy, 55–57, 96–103, 127–132, 305, 335, 363, 364, 366, 367, 370–372, 376
    - $GW$ , 55, 202
    - DMFT, 96, 98–101, 133
    - Hedin-Lundqvist, 53, 57–59, 200–202, 230
    - non local, 301–302, 305, 370
  - Shake-up, shake-off, 145, 375
  - Spectral function, 376–378
  - Spin dynamics, 385
  - Spin Hamiltonian, 385
  - Spin-orbit, 60, 85, 363–364, 372, 393
  - Stereography of atomic arrangement, 319, 321, 323–325
- T**
- Tetragonal distortion, 348–349
  - Thermal effects, 198, 340–343
  - Time-resolved photoemission, 333–337
  - Total energies, 313, 314, 316, 317
  - Transition probability, 15, 29, 37, 128, 308
- W**
- Work function, 265, 266, 270–272
- X**
- XFEL, 334, 337
  - XMCD sum rules, 387
  - X-ray edge singularities, 376
