# Index

- t*-history, 135
- action space, 148
- activist valence, 77
- activists, 59
- additive bias model, 22
- aggregate strict concavity, 22, 64
- amendment agendas, 165, 171, 173
- arms of the bandit, 134
- asymmetric information, 94–96, 110, 111
- bandit problem, 134
- Banks set, 115, 163–167, 171, 172, 179, 180, 182, 183, 190–192
- Baron-Ferejohn model, 206, 229
- bias, 274
- bias-driven debate equilibrium, 292
- Borda electoral competition, 114
- boundary condition, 86
- campaign funding, 128
- candidate quality, 93, 95, 96, 110–112
- closed graph, 39
- closed rule, 229, 231
- CNE, 63
- coalition, 227, 228, 230–232, 234, 236, 237, 242–245
- coalition types, 211
- cognitive limitations, 223
- common interest, 272
- comparative statics, 96, 103, 104, 106, 108–111
- Condorcet jury theorem, 114
- Condorcet winner, 117, 128, 165, 166, 170, 174–177, 180–186
- continuation value, 207, 234
- conventions, 223
- convergence coefficient, 59, 66
- core, 42, 43
- criteria, 166, 169
- critical Nash equilibrium, 63
- cutpoint, 98, 99, 255
- debate, 271, 276
- debate monotonicity, 286
- deliberation, 271
- deterministic model, 42
- divide the dollar, 116, 167, 168, 179, 180, 182
- dynamic allocation index, 141, 142
- electoral game, 20
- electoral variance, 60
- equilibrium
  - bias-driven debate, 292
  - critical Nash, 63
  - local pure strategy Nash, 62, 83
  - local strict Nash, 63
  - locally isolated strict Nash, 86
  - mixed strategy, 238, 239, 241, 242
  - mixed strategy electoral, 20, 24, 45
  - mixed strategy Nash, 61
  - pure strategy Nash, 59
  - pure strategy electoral, 20, 25–28, 35
  - pure strategy Nash, 62
  - separating debate, 278

- stationary, 230, 234, 238, 242, 243, 245
- error in bias, 273, 287
- error in common interest, 273, 287
- Euler characteristic, 87
- experimental research, 112
  
- fairness, 222
- final passage votes, 257
- fixed utility model, 21, 26, 29, 30
- focal points, 223
- folk theorem, 231, 242, 246
- full information equivalence, 273, 280
  
- game
  - electoral, 20
  - plurality, 114–116, 118, 120, 128
  - repeated, 231, 242, 245, 246
  - tournament, 114–119, 128
- Gamson's law, 216
- generalized Euclidean preferences, 34
- Gittins index, 141–143
- Gittins index strategy, 131
- goods and bads, 168, 179–181, 183, 184
- gridlock interval, 253
  
- Hessian, 59
  
- index for bandit problem, 136
- index strategy, 136
- induced mixed strategy, 98–100, 102, 104
- inequality, 115, 122, 123, 128
- influence, 284
- information
  - aggregation, 114
  - asymmetric, 94–96, 110, 111
  - private, 94, 98, 107, 111
  - structure, 274
- informed individual, 274
  
- learning, 223
- legislative
  - bargaining, 228, 229, 231–233, 245
  - organization, 227, 228, 243, 244
  - parties, 227, 229, 231, 232, 242, 244, 245
  - voting, 227–229, 231, 232, 244, 245
- LNE, 62
  
- local pure strategy Nash equilibrium, 62, 83
- local strict Nash equilibrium, 63
- locally isolated, 86
- locally isolated LSNE, 86
- LSNE, 63
  
- majority preference, 172
- mean voter theorem, 34, 59, 64
- min-max equilibrium, 117
- mixed strategy, 234, 235, 238, 240, 242
  - electoral equilibrium, 20, 24, 45
  - equilibrium, 238, 239, 241, 242
  - Nash equilibrium, 61
- model
  - additive bias, 22
  - Baron-Ferejohn, 206, 229
  - deterministic, 42
  - divide the dollar, 116, 167, 168, 179, 180, 182
  - fixed utility, 21, 26, 29, 30
  - goods and bads, 168
  - multiplicative bias, 23
  - pivotal politics, 251, 254
  - plurality, 114
  - random utility, 21
  - spatial voting, 232, 233
  - utility difference, 22, 27, 28, 32–34, 37, 43, 45, 48
  - utility ratio, 23, 50
- Morse inequalities, 87
- multiplicative bias model, 23
- myopic strategies, 139
  
- Nash equilibrium, 59
- nationalism, 60
  
- optimal strategy, 117, 135
- outcome, 270
  
- parliamentary government, 228, 232
- parties
  - legislative, 227, 229, 231, 232, 242, 244, 245
  - political, 227, 228, 232, 233, 244–246
- party cartel model, 251, 253
- pivotal
  - message constraints, 277
  - politics model, 251, 254
  - voting constraints, 277

- plurality, 113, 114, 116, 117, 122, 128
  - game, 114–116, 118, 120, 128
  - model, 114
- polarization, 95, 103, 111
- policy coincidence, 20, 37
- political institution, 87
- political parties, 227, 228, 232, 233, 244–246
- pooling in common interest, 277
- private information, 93, 94, 98, 107, 111
- private interest, 272
- proportionality rule, 216
- proposal power, 212
- public project, 165, 167, 168, 182, 185
- pure strategy electoral equilibrium, 20, 25–28, 35
- pure strategy Nash equilibrium, 62
- purification, 94
  
- random utility model, 21
- redistributive politics, 115
- repeated game, 231, 242, 245, 246
- reward, 148
- right, 280
- robustness, 40
  
- semi-pooling in common interest, 277
- separating
  - debate equilibrium, 278
  - in common interest, 277
  - in private interest, 277
- social welfare optima, 29, 30, 32–34
- sophisticated voting, 115
- spatial voting model, 232, 233
- states of arm  $i$ , 134
- stationary
  - equilibrium, 230, 234, 238, 242, 243, 245
  - Markovian strategy, 136
  - strategy, 230, 231, 246
- status quo, 273, 289, 292, 297
- strategy
  - equilibrium, 228
  - mixed, 234, 235, 238, 240, 242
  - myopic, 139
  - optimal, 117, 135
  - stationary, 230, 231, 246
  - stationary Markovian, 136
- strict local concavity, 59, 64
- strictly monotonic, 21
- strong, 45
- strongly externally stable, 42
  
- top cycle, 166, 170, 171, 174, 179–184, 189, 190
- tournament, 113, 114, 122
- tournament game, 114–119, 128
- transversality, 61, 85
  
- uncovered set, 115, 165, 166, 171, 179, 182, 193, 197
- uninformed individual, 274
- utility difference model, 22, 27, 28, 32–34, 37, 43, 45, 48
- utility ratio model, 23, 50
  
- valence, 59
- value, 117
- value function, 135
- voter
  - covariance matrix, 66
  - ideal points, 65
  - rationality, 82
- voting by successive elimination, 165, 171
  
- weak  $T$ -chain, 171, 181, 186, 189, 192, 197
- weak Condorcet winner, 170, 173, 179, 180, 182, 188, 190, 191
- weak\* topology, 20
- weakly externally stable, 42
- weakly monotonic, 21
- worth of a strategy, 135
