

# Subject Index

- Absorption coefficient 226
  - effects 1
  - , laser beam 225, 228
  - losses 236
  - of energy 246
  - with a time delay 271
- Accuracy of inversion technique 167
- Acoustic pulse 255
  - sounding 21, 156
  - transit time 232, 250, 253, 266, 270, 288, 308
- Active sensing system 156
- Adapting radius of curvature 306
  - tilt 306
- Adaptive coordinate and phase changes 303
  - coordinate systems 303, 307
- Adiabatic process 157
  - variations 274
- Algorithms for thermal blooming 296, 301
  - , alternating direction implicit, or ADI 301
  - , explicit 297
  - , implicit 297, 299
  - , simple differencing 295
  - , stable and convergent 295
- Amplitude 72, 291
  - covariance function 82
  - filter function 82
  - fluctuations 30, 81
  - in focal plane 238
  - profile 238
  - spectra 33
  - variance 129
- Angle of arrival 3, 140
  - — — fluctuations 140, 199, 207
- Angular deflection upwind 281
- Aperture averaging of scintillation 214
  - size, finite 129
  - , transmitting 130, 135, 139
- Backus-Gilbert inversion technique 163, 167
- Beam, bounded 112, 232
  - broadening 137, 138, 147
  - , center of gravity 154, 155
  - , collimated 117, 120, 125, 130, 135, 137, 148, 232
  - , diverging 117, 120, 124, 129, 130
  - , focused 124, 129, 130, 135, 138, 228
  - , gaussian *see* Gaussian beam
  - intensity 226, 246
  - quality 228
  - size 129–131, 139, 147
  - , slewed 229
  - spatial dependence 228
  - spread 129, 136, 149, 154, 199
  - , time dependence of 228
  - , truncated or obscured 302
  - waist 234
  - wander 129, 139, 154
  - wave 129, 131
- Bethe-Salpeter equation 130, 141
- Born approximation 4, 37, 46, 48
- Break-point frequency 158
- Carrier-to-noise ratio 206, 212, 214
- Central difference operator 298
  - limit theorem 101
- Characteristic functional 64, 101, 103
- Coherence 161
  - area 182, 186, 207, 211
  - bandwidth 129
  - diameter 204
  - function 142
  - —, fourth-order 66, 83, 86, 107
  - length 79, 183, 187, 195, 199
  - , spatial 129
  - time 129, 176, 184
  - —, long 198
- Coherent intensity 143
- Computational efficiency 303
- Computer calculation and experimental results 316
  - — isoirradiance contours 315
  - methods 228, 308
  - results, empirical 230, 308
  - , solution of blooming problems 294, 316

- Condensation 225, 257, 281, 308, 309  
 —, differential equation for 275  
 —, gaussian slab, geometric optics 280  
 — in a moving medium 247  
 —, short pulse 271  
 — source terms 263  
 —, steady heating 226  
 Confluent hypergeometric function 141, 143  
 Conservation of energy 101  
 — of mass 308  
 Conservative passive additive 12  
 Convective cooling 229  
 — flow 313  
 Correlation distance 149  
 — function 129  
 — — on axis 148  
 — —, two-frequency 129, 152  
 — slope method 157, 162  
 Covariance function 17, 79, 87, 113, 119, 162  
 — — of the irradiance 83, 110  
 — matrix 166  
 Cross spectrum 141, 160  
 Crossed beam method 168  
 Cylindrical geometry 264  
 — heating profiles 264
- Dawson's integral 265  
 Delta correlated 60  
 Density variation 228  
 — — in an ideal gas 245  
 Depolarization 2, 27, 46, 50, 175  
 Diagram method 52, 59, 141  
 Diffraction 75, 77, 226, 303  
 — focus 285  
 — pattern, one-dimensional 238  
 — theory 4  
 Diffusion equation 30  
 Dirac delta function 258, 312  
 Direct detection 171, 203, 205, 206, 211, 216  
 Diversity reception 213  
 Downlink diffraction-limited gain 213  
 — power gain 201  
 — power transfer 200  
 Dyson equation 56, 130, 141
- Early time behavior 248  
 — — dependence 287  
 — — regime 308  
 — — Taylor expansion 264  
 Electrostrictive effects 273–275  
 Enhancement phenomenon 314  
 Ergodicity 15  
 Error probability 209, 212  
 — rates 210, 216–218
- Exposure time 154  
 Extinction 281  
 — along the ray 280
- Far-field region 181, 182, 200  
 Fast Fourier transform (FFT) 297, 301  
 — heating 245  
 — -tracking transmitter 155  
 Field amplitude 234  
 —, mean 50, 52, 59, 84, 142  
 — configuration 232–234  
 Fluctuation characteristics of plane wave 129  
 — — of spherical wave 129  
 Fluid mechanics 244  
 Focal distance 129  
 Form invariance 307  
 Fourier transform 248, 253, 260, 309, 316  
 — —, fast 297, 301  
 — —, finite 301  
 Fourier-Stieltjes integral 17  
 — transform 14, 31  
 Fourth-order coherence function 66, 83, 86, 107  
 — moment 60, 130, 153  
 Frequency spectrum 110, 113  
 — — or irradiance fluctuations 86, 92, 94  
 Fresnel approximation 294  
 — length 29, 36, 39  
 — number 112, 117, 181  
 — zone 38, 47, 110, 124  
 Frozen hypothesis 122  
 — turbulence 17, 113
- Gas heating 225  
 Gauss' theorem 236  
 Gaussian beam 228, 287  
 — —, circularly symmetric 266, 289  
 — —, focused 284, 289  
 — — in a transverse flow 265  
 — — modes 233  
 — — steady transverse flow 265  
 — — turned on at  $t=0$  259, 265  
 — — early time 264  
 — random variable 54  
 — slab 280  
 Geometrical optics 4, 48, 71, 74, 75, 227, 229, 276, 280, 284, 287  
 — —, limit to validity 282  
 — —, focused gaussian beam 286  
 Gladstone-Dale constant 224, 244  
 — reaction 244  
 Green's function 28, 49, 51, 53, 57, 84, 174, 180, 197, 248, 257, 268, 297, 303  
 — —, averaged 84

- Hankel transform 25, 233, 248, 256, 265, 268, 289, 317
- Heat energy deposited per unit volume 225
- Heating at late times 250
- in a cylindrical geometry 256
  - profile, one-dimensional 251, 268
  - pulses 255
  - rate per unit volume 246
  - , slow 245, 255
  - , steady 251, 286
  - with a multiplicative time dependence 253
- Heterodyne detection 171, 204, 211, 216
- Heuristic derivation 245
- theories 70
- High power laser effects 1
- Homogeneity 19
- Homogeneous and isotropic turbulence 133
- Huygens' principle 243
- Huygens-Fresnel principle 130, 141
- , extended 80, 141, 153, 172, 175, 177, 181, 200, 277
- Hypergeometric function 135
- Ideal gas 224
- — density variations 245
- Ill-posed problem 164
- Illuminated aperture 237
- Image resolution 129
- Inertial subrange 12, 20
- Infinite line source 257
- Information-gathering cylinder 258, 268, 270
- Initial parameters 228
- Instability problem 164
- Integral equation representations 141
- methods 303
  - scale 52
  - techniques 297
  - transforms 233, 247, 316
- Intensity, average 136, 147–149
- , — of beam wave 136
  - distribution 234, 282, 291
  - — focal plane 239
  - — rays 236
  - variation 277, 280
  - — along a ray trajectory 278
  - — due to lensing effects 280
  - — for collimated beams 283
- Inversion theorem 256, 289
- Irradiance covariance function 66, 86
- spectrum 86, 92, 94
- Isobaric fluid relation 309
- Isoplanatism 185, 189, 194, 197
- Kinetic cooling 271
- temperature reservoir 271
- Kirchoff approximation 237
- diffraction theory 236
- Kolmogorov model 20
- spectrum 34, 36, 95, 108, 134, 143, 156, 180
  - turbulence scale 124
  - — Obukhov model 71
- Kummer function 135, 141
- Late time behavior 250, 265, 269
- Lateral displacement of adjacent rays 280
- Least-square estimation 163
- Lidar 156
- Light rays 236
- — bent into the stream 315
- Line-of-sight path 135
- Local method of small perturbations 50, 67
- Locally homogeneous 132
- log amplitude 31
- — fluctuations 34, 86, 130, 133, 141, 160, 178, 197
  - — variance 36, 40
  - irradiance fluctuations 157
  - normal probability distribution 48, 99, 102, 114, 116, 119, 136
- Longitudinal scale 88, 107, 109
- Mach number, free stream 251
- Marching techniques 296
- Markov approximation 51, 59
- random process 4, 50, 60
- Matrix inversion 300
- Maxwell equations 230
- Method of small perturbations 27
- smooth perturbation 4, 46, 48, 130, 163
- Microscale of turbulence 12, 20, 27, 29, 70, 117, 135, 162
- Mode decomposition 1, 181, 197, 202
- Moment, fourth-order 60, 130, 153
- , second 130
- Moments 111, 114
- , higher order 64
  - of the distribution 101
- Momentum 308
- Multiple pulses 312
- Mutual coherence function 59, 62, 78, 83, 85, 179, 185
- n reservoirs 272
- Near-field region 182
- Noise 197, 202–205, 207
- Nonadaptive coordinate system 304
- Nonlinear blooming problem 298
- Norm of matrix 164

- Numerical approximation 295  
 — instability 296  
 — solution of the hydrodynamic equations 308  
 — techniques 294
- Outer scale of turbulence 12, 20, 57, 70, 117, 122, 135, 162
- Parabolic equation 47, 50, 60, 109  
 — — method 130, 141  
 — heating profile turned on at  $t=0$  268  
 — slab in a transverse flow 258  
 — — turned on at  $t=0$  262
- Paraxial beams 230, 237, 291  
 — wave equation 294
- Passive sensing system 156
- Pasted phase approximation 239, 244, 277, 291
- Percentage error 164
- Perturbation method 48  
 — theory 276, 278
- Phase change 224, 240  
 — fluctuations 30, 71, 133, 141, 171, 178, 188, 192, 197, 198  
 — fronts 235  
 — shift, blooming effects 287, 290  
 — spectra 33  
 — structure function 35, 36, 88, 140  
 —, surfaces of constant 235  
 — variance 129
- Polarization *see* Depolarization
- Potential temperature 156
- Power absorption per unit length 246  
 — spectral density 16, 34
- Probability distribution 41, 107, 111, 129  
 — —, log normal 48, 99, 102, 114, 116, 119, 126  
 — — of the irradiance 48, 83, 95  
 — —, Rayleigh 49, 99, 102, 114  
 — —, Rice-Nakagami 99, 102
- Pulse train absence of flow 270  
 — — presence of flow 270
- Pulses, series of short 316
- Quasi-optical approximation 47
- Quivering 3
- Radar 156
- Radiation condition, modified 243
- Radiative transfer equation 64, 94
- Radius of curvature of the phase front 234
- Random amplitude 133  
 — lenses 74
- Range of validity, focused beam 130, 138  
 — — —, Rytov method 134, 153
- Ray 235  
 — crossings 282  
 — curvature 281  
 — trajectories 277, 278
- Rayleigh probability distribution 49, 99, 102, 114
- Rayleigh range 226
- Reciprocity 176, 181, 202, 206, 217, 218
- Refractive index 1, 10, 13, 17, 71, 225, 230, 239, 243, 281  
 — — fluctuations 11, 33, 132  
 — —, small disturbances 239  
 — —, — variations 230, 243  
 — — spatial frequency spectrum 177  
 — — structure constant 20, 23, 25, 132, 157  
 — — turbulence 14
- Region of validity,  $t^3$  term 264
- Regularization method 165
- Remote sensing 129, 156  
 — — of average structure constant 156  
 — — of wind velocity 157, 162  
 — — of structure constant 162
- Removal of the nonlinear phase 206
- Repetitive pulses 270
- Resolution 167
- Ricatti equation 4, 47
- Rice-Nakagami probability distribution 99, 102
- Rytov's method 4, 37, 47, 100, 130, 136, 172, 178
