C. K. JØRGENSEN

Oxidations Numbers and Oxidation States

VII, 291 pages. 1969
(Molekülverbindungen und Koordinationsverbindungen in Einzeldarstellungen)
Cloth DM 68,—; US \$29.30
ISBN 3-540-04658-5

Contents: Formal Oxidation Numbers. Configurations in Atomic Spectroscopy. Characteristics of Transition Group Ions. Internal Transitions in Partly Filled Shells. Inter-Shell Transitions. Electron Transfer Spectra and Collectively Oxidized Ligands. Oxidation States in Metals and Black-Semi-Conductors. Closed-Shell Systems, Hydrides and Back-Bonding. Homopolar Bonds and Catenation. Quanticule Oxidation States. Taxological Quantum Chemistry.

H.-H. PERKAMPUS

Wechselwirkungen von π -Elektronensystemen mit Metallhalogeniden

64 Abbildungen. 37 Tabellen
XI, 215 Seiten. 1973
(Molekülverbindungen und Koordinationsverbindungen in Einzeldarstellungen)
Gebunden DM 78,—; US \$33.60
ISBN 3-540-06318-8

Inhaltsübersicht: Einleitung und Abgrenzung. Eigenschaften der Donatoren und Acceptoren. Proton-Additions-Komplexe. π -Komplexe. σ -Komplexe. Register.

Die Umsetzung von π -Elektronensystemen mit Metallhalogeniden führt in Anwesenheit von Protonen zu Proton-Additionskomplexen. Sind keine Protonen vorhanden, so entstehen π - oder σ -Komplexe. Besonders ausführlich werden die binären Systeme π -Elektronensystem und Metallhalogenid behandelt. — Während das Gebiet um die Jahrhundertwende nur von bescheidenem präparativen Interesse war, ist es heute ein eigenes faszinierendes Arbeitsgebiet geworden, in dem alle modernen spektroskopischen Methoden zur Aufklärung der Struktur- und Bindungsverhältnisse angewandt werden.

Electrochemical Processes in Fuel Cells

98 figures. XI, 274 pages. 1969 (Anorganische und allgemeine Chemie in Einzeldarstellungen, Band IX)
Cloth DM 54,-; US \$23.30
ISBN 3-540-04418-3

In the last few decades the development of different types of fuel cells has greatly stimulated research into basic processes occurring in these cells. It is the aim of this monograph to describe and discuss the progress made in our understanding of these electrochemical processes. Chapters I to III introduce the reader to the general problems of fuel cells. The nature and role of the electrode material which acts as a solid electrocatalyst for a specific reaction is considered in chapters IV to VI. Mechanisms of the anodic oxidation of different fuels and of the reduction of molecular oxygen are discussed in chapters VII to XII for the low-temperature fuel cells and the strong influence of chemisorbed species or oxide layers on the electrode reaction is outlined. Processes in molten carbonate fuel cells and solid electrolyte fuel cells are covered in chapters XIII and XIV. The important properties of porous electrodes and structures and models used in the mathematical analysis of the operation of these electrodes are discussed in chapters XV and XVI.

W. SCHNEIDER

Einführung in die Koordinationschemie

38 Abbildungen. VIII, 173 Seiten. 1968
Gebunden DM 36,-; US \$15.50
ISBN 3-540-04324-1

Dieses Lehrbuch führt auf knappem Raum und in einfacher Weise durch das große und wichtige Gebiet der Koordinationschemie, d. h. der Chemie der Metallkomplexe. Anhand ausgewählter Tatsachen wird ein moderner Überblick vermittelt, der dem Studierenden das Eindringen in speziellere Probleme erleichtert. Dabei wird besonders den Fragen und Gesichtspunkten Aufmerksamkeit geschenkt, welche in die Vielfalt der Erscheinungen eine gewisse Ordnung hineintragen können. In ihrer Funktion will diese Einführung eine Brücke darstellen zwischen den üblichen Grundvorlesungen der Hochschulen einerseits und dem spezialisierten Unterricht bzw. der Originalliteratur andererseits. In ihren Anforderungen sollte sie jedem Chemiker unabhängig von der speziellen Ausbildungsrichtung leicht verständlich sein.
