

Subject Index

- Abiological reactions, atmospheric nitrogen 105
Activated charcoal, isolation of marine Gelbstoff 65
Acylperoxyl, NO_x 108
ADP 150
Aerosol neutralization, of NH₃ 110
Air-sea interface 85
Air-sea-exchange, carbon cycle 182
Albedo 204
Alkaline phosphatase 190
Alkylperoxyl, NO_x 108
Amadori rearrangement 69
Amberlite XAD-2, isolation of marine Gelbstoff 65
Amino acids, fluxes in the Sargasso Sea 189
Ammonia, in the atmosphere 110
– precipitation-volatilization cycle 121
Ammonium oxidation 111
Analysis, organic material in sea water 33
Analytical methods, organic material in sea water 30
Annual fluxes, terrestrial biospheric carbon cycle 150
Antarctica cores, measurements of CO₂ 159
Ascophyllum nodosum, production of Gelbstoff 67
Atmosphere, carbon reservoir 142
Atmospheric CO₂, modelling of 161
– secular trend and seasonal amplitudes 157
Atmospheric nitrogen 105
Atomic oxygen, O(¹D) 109
- Bacteria, sink for organic compounds 49
Basaltic oceanic crust, carbon contents 169
Biological-chemical interactions, surface of the ocean 100
Biomineralization 190
Biosphere, carbon reservoir 142
– reservoir size 153
Black smokers 166
Box-diffusion-model, of CO₂ transport 200
Bubble Interfacial Microlayer Sampler 99
Bursting bubbles, transfer to the atmosphere 98
- $\delta^{13}\text{C}$ ranges, for various carbon-bearing materials 138
(C₃)-cycle 151
(C₄)-cycle 151
Calcite solubility 197
Calcites, scanning electron micrographs 199
Calvin-Bensor 151
Carbohydrates, in humic acid 10
Carbon cycle, exchange and transport rates 143
– man's input 140
– on land 149
– reservoir sizes 142
– sinks, sources and fluxes 139
Carbon cycle modelling 199
Carbon dioxide, boundary phenomena 167
– chapter 127
– history 127
– in the atmosphere 155
– man-made 162
– mid-water stratification 186
– solar nebula 130
– ¹⁴C variation in water samples 145
Carbon in the sea 143
Carbon isotopic composition, bulk sediment 195
Carbon monoxide, in the atmosphere 155
Carbon phase diagram 131
Carbonaceous Chondrites-type I, $\delta^{13}\text{C}$ values 137
Carbonate compensation depth 198
Carbonate dissolution 173
Carbonate equilibrium 173
Carbonate system, mass balance 171
Carbonic anhydrase 190, 191
Carbyne, carbon phase diagram 131
Chemical weathering, global rates 177
Chemiluminescence spectra, humic substances 18
Chemoclines, carbon cycle 196
Chemodenitrification 118
Chlorophyll 150
CO₂, atmosphere and surface ocean water 186
– seasonal oscillations 161
– variation in polar ice cores 160
CO₂ induced Weathering, the chemistry 169

- CO₂-fixation 150
 CO₂-warming of climate 205
 Coal, energy consumption 163
 – resources 142
 Coastal zones, organic material 36
 Combustion, effect on carbon dioxide levels 162
 Continental granitic crust, carbon contents 169
 Continental sediments, carbon contents 169
 Cosmic molecular clouds, CO₂ 127
 Crustal compartments, carbon contents 169
 Cycle, dinitrogen fixation-denitrification 121
 – N₂ fixation-denitrification 105
 – organic carbon in the sea 53
 – precipitation-volatilization 105
 Cytochrome b 150
- DDT, sea surface 87
 – surface layer 80
 Debye-Hückel equation 171
 Deforestation, effect on carbon dioxide levels 162
 Denitrification 105, 115
 – freshwater and marine environments 118
 Denitrification rate, reaction conditions 117
 Diamond, carbon phase diagram 131
 Diamond-like crystal lattice 132
 Diamonds, δ^{13} values 137
 Dinitrogen 105
 Dinitrogen pentoxide, smog 108
 Dissolved fraction, ocean 28
 Dissolved organic carbon, sea surface 87
 – sea water 29
 – DOC
 Dissolved organic material, minor components 69
 Distribution, organic material in sea water 35
 DOC, ocean carbon cycle 148
 DOC concentration, seasonal cycle 180
 DOM, incorporation into POM 50
- Earth's crust, total carbon content 168
 Ecological considerations, in nitrification 114
 Energy future 164
 Energy relationships, in nitrification 113
 Erosion, carbon cycle 168
 Erythrocyte carbonic anhydrase C 191
 ESR spectra, humic acid 17
 Estuaries, organic material 36
 Estuaries and coastal zones, organic materials 45
- Fecal pellets 51
 Ferredoxin 150
 Fertilisation, effect on carbon dioxide levels 162
 Fluorescence spectroscopy, humic substances 14
 Flux of CO₂, field determinations 185
 Fossil fuel combustion, δ^{13} C measurements 154
 Fossil fuels, known reserves 165
 Fossil-fuel-CO₂, input to the atmosphere 157
 Free radicals, humic substances 15
 Fucus vesiculosus, production of Gelbstoff 67
 Fulvic acid 1
 – degradation 5
 Fulvic acids 63
 – chemical structure 11
 – UV absorption differences 72
 Fulvic acids from Marine Gelbstoff, structure 73
- Garrett screen 26
 Gas, energy consumption 163
 – resources 142
 Gas stripping methods, volatiles in ocean water 27
 Gelbstoff 63
 – ecological consequences 75
 – structure elucidation 72
 Gelbstoffe 45
 GEOSECS program 145
 Gibbs adsorption equation 84
 Global climate, mathematical treatment 203
 Global warming 203
 Graphite, carbon phase diagram 131
 – δ^{13} values 137
 Greenhouse-effect, carbon dioxide 203
 Greenland cores, measurements of CO₂ 159
- Hatch-Slack 151
 Head space analysis, volatiles in ocean water 27
 Henry law constant 172
 Heterogeneous accretion 130
 Heterotrophic nitrification 113
 Heterotrophy, sink for organic material 48
 Heterotrophy at the sea floor 52
 Heyns rearrangement 70
 Homogeneous accretion 130
 Humic acid 1, 63
 – degradation 5
 Humic material, IR spectra 72
 Humic substances 1, 164
 – chemical structure 9
 – elemental composition 3
 – ESR-spectra 15
 – fluorescent characteristics 14
 – free radical characteristics 15
 – functional groups 3
 – light absorbing characteristics 13
 – molecular weights 2
 – structural aspects 2
 Humin 1
 Humus, carbon reservoir 142
 – structure 10
 Humus formations 9
 Hydro, energy consumption 163
 Hydrogen bonding, in humic acids 11

- Hydroperoxyl, NO_x 108
 Hydrothermal vent, east pacific rise 139
 Hymatomelanic acids 21
- Ice core, measurements of CO₂ 159
 Igneous carbonatites 136
 Inorganics, at the sea surface 88
 Interstellar clouds, carbon-containing molecules 129
 Interstellar space, presence of molecules 128
 Ionosphere 106
 Iron silicate weathering 170
 Irradiation, humic substances 18
 Irradiation of fulvic acid, compounds identified 20
¹³C/¹²C Isotope ration, marine Gelbstoff 66
 Isotopic ratios, interstellar chemistry 128
- Juvenile carbon dioxide 134
- Karstification 175
 KMnO₄ oxidation, of humic acids 8
- Laminaria hyperborea, production of Gelbstoff 67
 Larger organisms, sink for organic material 48
 Lead distribution, surface of the ocean 89
 Lignin 2
 Lithosphere, carbon reservoir 142
- Maillard reaction 69
 Mantle cross-sections 134
 Marine fulvic acid, structures 74
 Marine Gelbstoff 63
 – IR spectra 72
 – isolation of 64
 – sources of 65
 Marine humic acid, structures 74
 Marine humic and fulvic acids, analysis 72
 Marine limestones, δ¹³ values 137
 Marine Phytoplankton, source of marine Gelbstoff 66
 Marine plankton, carbon reservoir 142
 Mauna Loa 200
 Mesosphere 106
 Mesozoic, δ¹³ values 137
 Mestastable N₂, lightning 107
 Metals, in humic acid 10
 Meteorites 129
 Methane, in the atmosphere 155
 – volcanic carbon 166
 Methane clathrate, resources 142
 Methane producers 152
 Methylated fulvic acids 8
- N₂O, sinks 107
 NADH-H⁺ 152
- NADP-H 150
 Niskin bottle 26
 Nitric acid, smog 108
 Nitric oxide 107
 Nitrification 105, 111
 Nitrifying bacteria 111
 Nitrite oxidation, autotrophic bacteria 112
 Nitrogen, fluxes in the Sargasso Sea 189
 Nitrogen compounds 105
 Nitrogen cycle, sources and sinks 120
 Nitrogen dioxide 107
 Nitrogen fluxes 111
 Nitrogen oxides, lightning 107
 Nitrosamines, formation from nitrous acid anhydride 114
 Nitrous acid, smog 108
 Nitrous oxide 106
 NO₂, photolysis 108
 Nuclear, energy consumption 163
 Nuclear magnetic resonance spectra, humic substances 4
- Ocean, carbon reservoir 142
 – organic material 25
 – surface 79
 – the surface film 26
 Ocean surface, characterization 81
 – sampling and the nature of the sample obtained 82
 Oceanic CO₂ gas exchange 184
 Oceanic sediments, carbon contents 169
 Oceanography 25
 Oceans, Annual primary production 149
 Oil, energy consumption 163
 – resources 142
 Oil shales, resources 142
 Organic carbon, distribution in the ocean 148
 – erosion of 178
 – fluxes in the Sargasso Sea 189
 – sea water 31
 Organic materials, vertical distribution 39
 Organic materials in sea water, sources 44
 Organic matter, decomposition 152
 Organic nitrogen, in sea water 32
 Organic phosphorus, in sea water 32
 Organics, in the surface layer 86
 Ozone, natural abundance 109
 Ozone balance, nitrogen oxides 109
 Ozone destruction, NO_x 108
- Paleozoic, δ¹³ values 137
 Particles, settling velocities in sea water 188
 Particulate fraction, ocean 28
 Particulate organic carbon, sea surface 87
 PCB's, sea surface 87
 – surface layer 80

- PCO₂, effects of pollution 181
 – eutrophic lakes 180
 Peptides, in humic acid 10
 Permafrost regions, methane hydrates 166
 Peroxyacyl nitrate, smog 108
 Phenol-fatty acid esters, in HA's and FA's 12
 Phenolic acids, in humic acid 10
 Photochemistry, of Gelbstoff 75
 – of humic substances 1
 Photodecomposition, sink for organic material 48
 Photodissociation, N₂O 106
 Photooxidation, humic substances 18
 Phytoplankton, sink for organic compounds 49
 Pleistocene carbonates, δ¹³ values 137
 Pleistocene-tertiary, δ¹³ values 137
 Podzol B forest soil 16
 Polycyclic aromatic core, in humic acid 10
 POM, sinking 51
 Pool sizes, terrestrial biospheric carbon cycle 150
 Precambrian, δ¹³ values 137
 Precambrian environment 135
 Primary production, oceans 149
 Primary productivity, rates of 153
 Primordial methane 166
 Primordial ocean 135

 Radiation balance 203
 Radicals, NO_x 108
 Radiocarbon half life of 145
 Radiocarbon method 185
 Radon method 185
 Recent shelf sediment, δ¹³ values 137
 Rising bubbles 94
 River Rhine, PCO₂ profile 181
 Rock cycle 168
 – compartment sizes and flux rates 169

 Sampling, ocean surface 83
 Sampling methods, organic material in sea water 25
 Sea water, analytical methods 30
 – cycling through the oceanic crust 144
 – organic material 25
 Sea-Air Exchange 99
 Sediment-water interface, carbon cycle 196
 – ocean 42
 Sedimentary humic material, chemical tracers 68
 Sedimentation, historic rates in the Black Sea 156
 Semiquinone-radical ions 16
 Silicate minerals, weathering of 135
 Silicates, reactions with CO₂ 176
 Sinks, organic materials in sea water 47

 Smog, nitrogen compounds 108
 Soil fulvic acid 13
 Solar atmosphere, relative abundances of common elements 128
 Stratosphere 106
 Stratospheric ozone 109
 Strecker degradation 70
 Sugar cane, C₄-metabolism 151
 Sugars, fluxes in the Sargasso Sea 189
 Sulfate reduction 152
 Surface films, composition 84
 – geochemical impact 98
 – origin 93
 Surface ocean circulation, model of 201
 Surface of the ocean 79
 Synthesis in field soils, nitrosamine 115

 Tar sands, resources 142
 Terrestrial biospheric carbon cycle 150
 Terrestrial Gelbstoff, spectroscopic properties 71
 Terrestrial sources, organic materials in sea water 44
 The deep water, ocean 41
 The mixed layer, ocean 40
 The open ocean, organic materials 46
 The sediment, ocean 43
 The surface micolayer, vertical distribution 39
 Thermophilic bacteria 166
 Total organic carbon 25
 – sea water 29
 Transport of trace metals, in sea surface microlayers 85
 Trees, δ¹³C variations in northern hemisphere 154
 Tropical grasses, C₄-metabolism 151
 Tropopause 106
 Troposphere 106

 Ultraviolet spectra, humic substances 13

 Visible spectra, humic substances 13
 Volatile fraction, ocean 27
 Volcanic emanations, CO₂ 141
 Volcanic rocks, δ¹³ values 137

 Water column, organic constituents 27
 Weathering, carbon cycle 168
 Wet surfactants 86
 World energy consumption 162
 World food production 164

 X-ray diffraction, humic acids 11

 Yellow material 63

The Handbook of Environmental Chemistry

Editor: O. Hutzinger

Volume 1

Part A

The Natural Environment and the Biogeochemical Cycles

With contributions by P. J. Craig, J. Emsley,
D. J. Faulkner, P. M. Huang, E. A. Paul,
M. Schidlowski, W. Stumm, J. C. G. Walker,
P. J. Wangersky, J. Westall, A. J. B. Zehnder,
S. H. Zinder

1980. 54 figures, 59 tables. XII, 258 pages
ISBN 3-540-09688-4

Contents: The Atmosphere. – The Hydrosphere.
– Chemical Oceanography. – Chemical Aspects
of Soil. – The Oxygen Cycle. – The Sulfur Cycle.
– The Phosphorus Cycle. – Metal Cycles and
Biological Methylation. – Natural Organohalogen
Compounds. – Subject Index.

Part B

The Natural Environment and the Biogeochemical Cycles

With contributions by H. -J. Bolle, R. Fukai,
J. W. de Leeuw, S. W. F. van der Ploeg,
T. Rosswall, P. A. Schenck, R. Söderlund,
Y. Yokoyama, A. J. B. Zehnder

1982. 84 figures. XV, 317 pages
ISBN 3-540-11106-9

Contents: Basic Concepts of Ecology. – Natural
Radionuclides in the Environment. – The
Nitrogen Cycles. – The Carbon Cycle. – Mole-
cular Organic Geochemistry. – Radiation and
Energy Transport in the Earth Atmosphere
System. – Subject Index.

Berlin
Heidelberg
New York
Tokyo

The Handbook of Environmental Chemistry

Editor: O. Hutzinger

This handbook is the first work that covers the chemical and physical behavior of compounds in the environment.

Under the editorship of Prof. O. Hutzinger, formerly director of the Laboratory of Environmental and Toxicological Chemistry at the University of Amsterdam, now Ecological Chemistry and Geochemistry, University of Bayreuth, 65 international specialists have contributed to Parts A and B of the first three volumes:

- Volume 1: **The Natural Environment and the Biogeochemical Cycles**
- Volume 2: **Reactions and Processes**
- Volume 3: **Anthropogenic Compounds**

For a rapid publication of the material each volume was divided into several parts. Part A of the first three volumes appeared in 1980 and Part B in 1982. Each volume of Part B contains a cumulative subject index. More than 5064 literature references are cited. Future volumes are planned and will cover analytical chemistry, environmental engineering and toxicology.

The Handbook of Environmental Chemistry is a critical and complete outline of our present knowledge and will prove invaluable to environmental scientists, biologists, chemists (biochemists, agricultural and analytical chemists), medical scientists, occupational and environmental hygienists, research geologists and meteorologists as well as to industry and administrative bodies.
